NO - Intermittent failure, the communication bus line is OK at this time. Check for loose or poor connections, or worn/shorted wires. If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

5. Check for DTCs with the HDS.

Are DTCs B1000, B1005, B1007, B1011, B1012, B1013, B1015 and B1032 all indicated?

YES - Go to step 6.

NO - Faulty MICU; replace the under-dash fuse/ relay box.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the appropriate connector at each control unit in the table one at a time. Clear the DTC, then recheck for DTCs after each unit is disconnected.

CONTROL UNIT CONNECTOR REFERENCE

Control unit	Connector
Relay control module	Under-hood fuse/relay box connector E (14P)
Gauge control module	Connector A (12P)
Immobilizer-keyless control unit	7P connector
Combination switch control unit	8P connector
Driver's MPCS unit	Connector A (40P)
Climate control unit	40P connector
Audio unit	Connector C (24P)
HandsFreeLink control unit	28P connector
Power seat control unit	Connector A (40P)
Power tailgate control unit	Connector C(14P)
AcuraLink control unit (XM receiver)	Connector B(16P)
Rear MICU ⁽¹⁾	Rear fuse/relay box connector B (34P)
(1) Disconnect this one last	

Is DTC B1000 indicated with each individual unit disconnected?

YES - Go to step 11.

NO - Replace the control unit that was disconnected when B1000 did not reset (If the unit is the rear

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX**

MICU, go to step 8.)

8. Disconnect rear fuse/relay box connectors B (34P) and C (42P).
9. Check for continuity between each of the rear fuse/ relay box connector terminals listed in the table and body ground.

REAR FUSE/ RELAY BOX CONNECTOR TERMINALS REFERENCE

Connected control unit	Rear fuse/relay box connector terminal
Power seat control unit	B14
Power tailgate control unit	C16
AcuraLink control unit (XM receiver)	C32

Is there continuity?

YES - Repair short to ground in the wire between the rear fuse/relay box and the affected control unit.

NO - Go to step 10.

10. Measure the voltage between each of the rear fuse/ relay box connector terminals listed in the table and body ground.

REAR FUSE/ RELAY BOX CONNECTOR TERMINALS REFERENCE

Connected control unit	Rear fuse/relay box connector terminal
Power seat control unit	B14
Power tailgate control unit	C16
Acura Link control unit (XM receiver)	C32

Is there less than 1 V?

YES - Replace the rear fuse/relay box.

NO - Repair short to power in the wire between the rear fuse/ relay box and the affected control unit.

11. Disconnect each control unit connectors in the table.

CONTROL UNIT CONNECTOR REFERENCE

Control unit	Connector
Relay control module	Under-hood fuse/relay box connector E (14P)
Gauge control module	Connector A (12P)
Immobilizer-keyless control unit	7P connector
Combination switch control unit	8P connector
Driver's MPCS unit	Connector A (40P)
Climate control unit	40P connector
Audio unit	Connector C (24P)

HandsFreeLink control unit | 28P connector

12. Check for continuity between the under-dash fuse/ relay box connector N (45P) No. 22 terminal and body ground.

Fig. 11: Identifying Continuity Between Under-Dash Fuse/ Relay Box Connector N (45P) No. 22 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 13.

13. Turn the ignition switch ON (II).
14. Measure the voltage between the under-dash fuse/ relay box connector N (45P) No. 22 terminal and body ground.

Fig. 12: Measuring Voltage Between Under-Dash Fuse/ Relay Box Connector N (45P) No. 22 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair short to power in the wire.

NO - Faulty MICU, replace the under-dash fuse/ relay box.

DTC B1001: MICU INTERNAL (CPU) ERROR; DTC B1002: MICU INTERNAL (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1001 and/or B1002 indicated?

YES - Faulty MICU, replace the under-dash fuse/ relay box.

NO - Intermittent failure, the system is OK at this time.

DTC B1005: MICU LOST COMMUNICATION WITH RELAY CONTROL MODULE (RM MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1005 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the MICU and the relay control module.

5. Check for DTCs with the HDS.

Are DTCs B1158, B1959, B2162, and B2970 also indicated with B1005?

YES - Do the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**).

NO - Do the MICU input test (see **MICU INPUT TEST**).

DTC B1007: MICU LOST COMMUNICATION WITH COMBINATION SWITCH CONTROL UNIT (HLSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1007 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the MICU and the combination switch control unit.

5. Check for DTCs with the HDS.

Are DTCs B1062, B1155, and B1957 also indicated with DTC B1007?

YES - Do the combination switch control unit input test (see **WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST**).

NO - Do the MICU input test (see **MICU INPUT TEST**).

DTC B1011: MICU LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VSP/NE MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1011 indicated?

YES - Go to step 5

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the MICU and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1060, B1205, B1357, B1408, B1805, and/or B2160 also indicated with DTC B1011?

YES - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Do the MICU input test (see **MICU INPUT TEST**).

DTC B1012: MICU LOST COMMUNICATION WITH REAR MICU (RJC MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1012 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the MICU and the rear MICU.

5. Check for DTCs with the HDS.

Is DTC B1955 indicated with DTC B1012?

YES - Do the rear MICU input test (see **REAR MICU INPUT TEST**).

NO - Do the MICU input test (see **MICU INPUT TEST**).

DTC B1013: MICU LOST COMMUNICATION WITH DRIVER'S MPC'S UNIT (ASLOCKSW MESSAGE); DTC B1015: MICU LOST COMMUNICATION WITH DRIVER'S MPC'S UNIT (DRLOCKSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1013 and/or B1015 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the MICU and the driver's MPCs unit.

5. Check for DTCs with the HDS.

Are DTCs B1065, B1082, B1356, B1358, and/or B1905 also indicated with B1013 and/or B1015?

YES - Do the driver's MPCs unit input test (see **DRIVER'S MPCs UNIT INPUT TEST**).

NO - Do the MICU input test (see **MICU INPUT TEST**).

DTC B1032: MICU LOST COMMUNICATION WITH THE SRS UNIT (CDS MESSAGE)

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).**

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1032 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Check for DTCs with the HDS.

Is DTC B1011 also indicated with DTC B1032?

YES - Check for an open in the wire between the MICU and the gauge control module. If the circuit is bad, repair the open.

NO - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

DTC B1080: IGNITION KEY SWITCH CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1080 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Disconnect under-hood fuse/relay box connector D (10P).
7. Turn the ignition switch ON (II).
8. Measure the voltage between the under-hood fuse/ relay box connector D (10P) No. 7 terminal and body ground.

UNDER-HOOD FUSE/RELAY BOX CONNECTOR D (10P)

Wire side of female terminals

Fig. 13: Measuring Voltage Between Under-Hood Fuse/ Relay Box Connector D (10P) No. 7 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Substitute a known-good under-hood fuse/ relay box and recheck.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Check for continuity between the under-hood fuse/ relay box connector D (10P) No. 7 terminal and body ground.

UNDER-HOOD FUSE/RELAY BOX CONNECTOR D (10P)

Wire side of female terminals

Fig. 14: Identifying Continuity Between Under-Hood Fuse/ Relay Box Connector D (10P) No. 7 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire. After repairing, replace the No. 21 (7.5 A) fuse in the under-dash fuse/relay box.

NO - Go to step 11.

11. Disconnect under-dash fuse/relay box connector D (17P).
12. Connect the under-dash fuse/relay box connector D (17P) No. 6 terminal and body ground with a jumper wire.

UNDER-DASH FUSE/RELAY BOX CONNECTOR D (17P)

Wire side of female terminals

13. Check for continuity between the under-hood fuse/ relay box connector D (10P) No. 7 terminal and body ground.

UNDER-HOOD FUSE/RELAY BOX CONNECTOR D (10P)

Wire side of female terminals

Fig. 16: Identifying Continuity Between Under-Hood Fuse/ Relay Box Connector D (10P) No. 7 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good under-dash fuse/ relay box and recheck.

NO - Repair open in the wire.

DTC B1050: COMMUNICATION BUS LINE ERROR; DTC B1150: COMMUNICATION BUS LINE ERROR; DTC B1200: COMMUNICATION BUS LINE ERROR; DTC B1250: COMMUNICATION BUS LINE ERROR; DTC B1350: COMMUNICATION BUS LINE ERROR; DTC B1750: COMMUNICATION BUS LINE ERROR; DTC B1800: COMMUNICATION BUS LINE ERROR; DTC B1900: COMMUNICATION BUS LINE ERROR; DTC B1950: COMMUNICATION BUS LINE ERROR; DTC B2150: COMMUNICATION BUS LINE ERROR; DTC B2200: COMMUNICATION BUS LINE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Are DTCs B1050, B1150, B1200, B1250, B1350, B1750, B1800, B1900, B1950, B2150, and/or B2200 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the MICU and B-CAN connected units in the table.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

5. Check for DTCs with the HDS.

UNDER-DASH FUSE/ RELAY BOX CONNECTOR REFERENCE

Under-dash fuse/ relay box connector	B-CAN connected unit connector
Connector D(17P) No. 11 terminal	Under-hood fuse/relay box connector E (14P) No. 1 terminal
Connector N (45P) No. 22 terminal	Gauge control module connector A (12P) No. 5 terminal
Connector N (45P) No. 28 terminal	Combination switch control unit 8P connector No. 4 terminal
Connector J (21P) No. 4 terminal	Driver's MPCS unit connector A (40P) No. 28 terminal

Connector G (6P) No. 1 terminal	AcuraLink control unit (XM receiver) connector B(16P) No. 5 terminal
Connector G (6P) No. 1 terminal	Rear MICU (rear fuse/ relay box connector B (34P)

Is DTC B1000 also indicated?

YES - Troubleshoot DTC B1000.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the MICU and B-CAN connected units in the table.

DTC B2152: DRIVER'S MPCS UNIT INTERNAL (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B2152 indicated?

YES - Replace the driver's MPCS unit.

NO - Intermittent failure, the system is OK at this time.

DTC B2155: DRIVER'S MPCS UNIT LOST COMMUNICATION WITH MICU (MICU MESSAGE); DTC B2156: DRIVER'S MPCS UNIT LOST COMMUNICATION WITH MICU (MIRRORSW MESSAGE); DTC B2161: DRIVER'S MPCS UNIT LOST COMMUNICATION WITH MICU (DOORSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Are DTCs B2155, B2156, and/or B2161 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the driver's MPCS unit and the MICU.

5. Check for DTCs with the HDS.

Are DTCs B1055, B1056, B1157, B1159, B1255, B1955, B2156, and/or B2161 also indicated?

YES - Faulty MICU, replace the under-dash fuse/ relay box (see **REMOVAL AND INSTALLATION**).

NO - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

DTC B2157: DRIVER'S MPCS UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (ILLUMI MESSAGE); DTC B2160: DRIVER'S MPCS UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VSP/NE MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Are DTCs B2157 and/or B2160 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the driver's MPCS unit and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1011, B1060, B1061, B1205, B1206, B1207, B1359, B1906, B1956, B2157, and/or B2160 also indicated?

YES - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

DTC B2162: DRIVER'S MPCS UNIT LOST COMMUNICATION WITH RELAY CONTROL MODULE (RM MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B2162 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the driver's MPCS unit and the relay control module.

5. Check for DTCs with the HDS.

Are DTCs B1005, B1158, B1959, B2162, and/or B2970 also indicated?

YES - Do the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**).

NO - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

MICU INPUT TEST

NOTE: Before testing the MICU, troubleshoot the multiplex integrated control unit first, using **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Turn the ignition switch to LOCK (0).
2. Remove the left kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**).
3. Disconnect under-dash fuse/relay box connectors D, E, F, G, H, J, N, P, Q, W, and X.

NOTE: All connector views are wire side of female terminals.

Fig. 17: Identifying Under-Dash Fuse/Relay Box Connectors
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

*Connector view shown rotated 180 ° from actual position in the under-dash fuse/relay box.

Fig. 18: Identifying Under-Dash Fuse/Relay Box Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D11	LT GRN	Under all conditions (Under-hood fuse/relay box connector E (14P) disconnected)	Check for continuity between the D11 terminal and the under-hood fuse/relay box connector E (14P) No. 1 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
G1	LT GRN	Under all conditions (Rear fuse/ relay box connector B (34P) disconnected)	Check for continuity between the G1 terminal and the rear fuse/relay box connector B (34P) Non terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
			Check for continuity between the J4	

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

J4	LT GRN	Under all conditions (Driver's MPC unit connector A (40P) disconnected)	terminal and the driver's MPC unit connector A (40P) No. 28 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
P6	LT BLU	Under all conditions (MICU connector P (30P) disconnected)	Check for continuity between the P6 terminal and the DLC Non terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
N22	LT GRN	Under all conditions (Gauge control module connector A (12P) disconnected)	Check for continuity between the N22 terminal and the gauge control module connector A (12P) No. 5 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
N28	LT GRN	Under all conditions (Combination switch control unit 8P connector disconnected)	Check for continuity between the N28 terminal and the combination switch control unit 8P connector No. 4 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
X27	LT GRN	Under all conditions (Immobilizer-keyless control unit 7P connector disconnected)	Check for continuity between the X27 terminal and the immobilizer-keyless control unit 7P connector No. 4 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire

X27	LT GRN	(HandsFreeLink control unit 28P connector disconnected)	terminal: There should be continuity.	
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire

6. Reconnect the connectors, and make these input tests at the connectors.

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, the MICU must be faulty; replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**).

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
E9	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G601) • An open in the wire
H9				
O4				
P1	BRN	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G502) • An open in the wire
F1	YEL	Ignition switch ON (II) (Rear fuse/relay box connector B (34P) disconnected)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • A short to ground in the wire between the MICU and rear fuse/relay box
G3	WHT	Under all conditions (Rear fuse/relay box connector B (34P) disconnected)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • A short to ground in the wire between the MICU and rear fuse/relay box
				• Blown No. 4 (40 A) fuse in the main under-hood fuse box

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

F14	ORN	Under all conditions	Short connection to ground: The ignition key light should come on.	• Blown No. 6(7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • Faulty ignition key light • An open in the wire
W4	LT GRN	Under all conditions, (Interior lights switch in DOOR position)	Short connection to ground: The interior lights should come on.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 6 (7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • Blown map lights or ceiling light bulb(s) • An open in the wire

RELAY CONTROL MODULE INPUT TEST

NOTE: Before testing the relay control module, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Turn the ignition switch to LOCK (0).
2. Remove the under-hood fuse/relay box (see REMOVAL AND INSTALLATION).
3. Disconnect under-hood fuse/relay box connectors D (10P) and E (14P).

**UNDER-HOOD FUSE/RELAY BOX
CONNECTOR D (10P)**

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
E1	LT GRN	Under all conditions (Under-dash fuse/relay box connector D(17P) disconnected	Check for continuity between the E1 terminal and the under-dash fuse/ relay box connector D (17P) No. 11 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire

6. Reconnect the connectors, and make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, replace the relay control module.

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
D4	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G401) • An open in the wire
D6	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire
D7	YEL	Ignition switch ON (ID	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire

DRIVER'S MPCS UNIT INPUT TEST

NOTE: Before testing the driver's MPCS unit, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Turn the ignition switch to LOCK(O).
2. Remove the driver's door panel (see FRONT DOOR PANEL REMOVAL/INSTALLATION).
3. Disconnect driver's MPCS unit connectors A (40P) and B (14P).

Fig. 20: Identifying Driver'S MPCS Unit Connectors A (40P) And B (14P)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A28	LT GRN	Under all conditions (Under-dash fuse/relay box connector J (21P) disconnected	Check for continuity between the A28 terminal and the under-dash fuse/relay box connector J (21P) Non terminal: There should be continuity.	An open in the wire.
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire

6. Reconnect the connectors, and make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

- If all the input tests prove OK, replace the driver's MPCS unit.

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A5 B14	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G401) • An open in the wire
A7	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire
A25	YEL	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire

REAR MICU INPUT TEST

NOTE: Before testing the rear MICU, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Turn the ignition switch to LOCK (0).
2. Remove the left rear trim (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA).
3. Disconnect rear fuse/relay box connectors B (34P) and C (42P).

Fig. 21: Identifying Rear Fuse/Relay Box Connectors B (34P)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
B2	LT GRN	Under all conditions (Under-dash fuse/relay box connector G (6P) disconnected)	Check for continuity between the B2 terminal and the under-dash fuse/ relay box connector G (6P) No. 1 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
B14	LT GRN	Under all conditions (Power seat control unit connector A (40P) disconnected)	Check for continuity between the B14 terminal and the power seat control unit connector A (40P) No. 40 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
C16 ⁽¹⁾	LT GRN	Under all conditions (Power tailgate control unit connector C (HP) disconnected)	Check for continuity between the C16 terminal and the power tailgate control unit connector C(14P) No. 7 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
			Check for continuity between the C32	

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

C32 ⁽²⁾	LT GRN	Under all conditions (AcuraLink control unit (XM receiver) connector B (16P) disconnected)	terminal and the (AcuraLink control unit (XM receiver) connector B (16P) No. 5 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the wire
(1) With power tailgate				
(2) With AcuraLink				

6. Reconnect the connectors, and make these input tests at the connectors.

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, the rear MICU must be faulty, replace the rear fuse/relay box (see **REMOVAL AND INSTALLATION**).

INPUT TESTS REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
B18	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G603, G604) • An open in the wire
B29				
B4	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • Faulty rear fuse/relay box • An open in the wire
B23	YEL	Ignition switch ON (ID	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • Faulty rear fuse/relay box • An open in the wire

2007-09 ACCESSORIES AND EQUIPMENT

Navigation System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Navigation System Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

GENERAL OPERATION

Refer to the Navigation System Manual for the navigation system operating procedures.

Anti-theft Feature

The navigation system and audio unit have a coded theft protection circuit. Make sure you have the anti-theft security code before:

- Disconnecting the battery.
- Disconnecting the navigation unit 8P connector.
- Removing the No. 7 (10 A) fuse from the under-dash fuse/relay box.

After service, reconnect power to the navigation unit, and turn the ignition switch to ON (II). Enter the 4-digit anti-theft security code, then select Done.

If the code cannot be found, use the interactive Network (iN) to look it up. You can view the serial number in one of the Navi ECU diagnostic screen (see **VERSION**). Alternatively, you will need the serial number from the navigation unit under the driver's seat.

When replacing the navigation unit, be sure to give the client the new anti-theft security code.

Symptom Diagnosis

Certain circumstances and system limitations will result in occasional vehicle positioning errors. Some clients may think this indicates a problem with the navigation system when, in fact, the system is normal. Keep the following items in mind when interviewing clients about symptoms of the navigation system.

Self-Inertial Navigation Limitations

The limitations of the self-inertial portion of the navigation system (the yaw rate sensor and the vehicle speed signal) can cause some discrepancies between the vehicle's actual position and the indicated vehicle's position (GPS vehicle position).

The following circumstances may cause vehicle positioning errors:

- Moving the vehicle with the engine stopped and the vehicle stopped, such as by ferry or tow truck, or if the vehicle is spun on a turn table.
- Tire slippage, changes in tire rolling diameters, and some driving situations may cause discrepancies in travel distances. Examples of this include:
 - Continuous tire slippage on a slippery surface
 - Driving with snow chains mounted
 - Abnormal tire pressure
 - Incorrect tire size
 - Frequent lane changes across a wide highway

- Continuous driving on a straight or gently curving highway
- Very bumpy roads
- Tolerances in the system and map inaccuracies sometimes limit how precisely the vehicle's position is indicated. Examples of this include:
 - Driving on roads not shown on the map (map matching is not possible)
 - Driving on a road that winds in one direction, such as a loop bridge, an interchange, or a spiral parking garage
 - Driving on a road with a series of sharp hair-pin turns
 - Driving near a gradual highway exit or transition
 - Driving on one of two close parallel roads
 - Making many 90 degree turns

Global Positioning System (GPS) Limitations

The GPS cannot detect the vehicle's position or elevation during the following instances:

- For the first 5 to 10 minutes after reconnecting the battery (This process can take as long as 45 minutes).
- When the satellite signals are blocked by tall buildings, mountains, tunnels, large trees, inside parking structures or large trucks.
- When the GPS antenna is blocked by metallic window tinting or by an object placed above it in the vehicle. The GPS antenna requires a clear unobstructed view of the sky.
- When there is no satellite signal output (Signal output is sometimes stopped for satellite servicing).
- When the satellite signals are blocked by the operation of some electronic aftermarket accessories including, but not limited to non-OEM in-dash entertainment units (radio, CD players/changers, radar detectors and theft recovery systems) and cell phones placed near the navigation system.

The accuracy of GPS is reduced during these instances:

- Metallic window tinting above the GPS antenna.
- When only three or less satellite signals can be received (Four satellite signals are required for accurate positioning).
- When driving near high tension power lines.
- When the satellite signals are blocked by the operation of some electronic aftermarket accessories including, but not limited to non-OEM in-dash entertainment units (radio, CD players/changers, radar detectors and theft recovery systems) and cell phones placed near the navigation system.
- When the satellite control centers are experiencing problems.

MUTING LOGIC

Whenever the navigation system is giving guidance, the front speakers are muted. When the voice control system is being used, all of the speakers are muted. If the HandsFreeLink is in use, the voice control system is unavailable.

LCD DISPLAY UNIT LIMITATIONS

NOTE: **The screen is not touch sensitive. Use the interface dial and buttons to select items on the screen.**

- In cold temperatures, the display may stay dark for the first 2 or 3 minutes until it warms up.
- When the display is too hot because of direct summer sunlight, it will remain dark until the temperature drops (You may see an error message displayed stating this fact).
- When the humidity is high and the interior temperature is low, the display may appear cloudy. The display will clear up after some use.
- Fingerprints on the screen may sometimes be noticeable because of the panel's low-reflection coating. Clean the screen with a soft, damp cloth. You may use a mild cleaner intended for eye glasses or computer screens.

Symptom Duplication

- When the symptom can be duplicated, verify that it is not a characteristic of the system. Review the navigation system manual and compare it to a known-good vehicle (with the same software and database), under the same conditions. If the symptom is not the same, as the known-good follow the self-diagnostic procedures and the appropriate troubleshooting procedures.
- When the symptom does not reappear or only reappears intermittently, ask the client about the conditions when the symptom occurred.
 - Always ask the client to demonstrate the problem.
 - Try to establish possible user error or misunderstanding of the system.
 - Try to establish if outside interference may have been the cause.
 - Try to duplication the symptom under the same conditions the client experienced.
 - Vibration, temperature extremes, and moisture (dew, humidity) are factors that are difficult to duplicate.
 - Inspect the vehicle for after-market electronic devices (vehicle locators, amps, radar detectors, etc.) that may be hidden.

NOTE: **When interchanging navigation DVD/parts during diagnosis**

When troubleshooting navigation system problems, ensure that the known-good vehicle is the same software version year and model as the vehicle being serviced. Mixing incompatible navigation DVDs or other system components can delay the troubleshooting process by causing can effects unrelated to the original problem.

Service Precautions

- If the navigation unit needs to be replaced, you can back-up the navigation data and transfer it to a new navigation unit. See **SAVE USERS MEMORY** (see).
- Before disconnecting the battery, make sure you have the anti-theft codes for the audio system and the navigation system, and write down the audio presets. Also obtain any PGM-FI or transmission DTCs and freeze frame date (which will be lost when the ECM/ PCM loses power).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- When the battery is disconnected, the internal GPS clock is reset to 0:00. The clock will reset to the correct time after the system finishes GPS initialization.
- After reconnecting the battery, you have to wait to get the initial signal from the satellite. It will take from 10 to 45 minutes.
- Before returning the vehicle to the client, enter the anti-theft codes for the audio system and navigation system.
- Adjust the setup clock settings (time zone and daylight savings) in the navigation system.

System Initialization

If for any reason, you lose power to the navigation system (like the battery was disconnected). The navigation system will require initialization. Once completed, your system will be ready to use.

This initialization requires the following:

- Entering the 4-digit anti-theft security code to unlock the system
- GPS initialization (may not be needed depending of the length of time the system was without power)
- Map matching to align the GPS to a location on the map

Entering Security Code

Any time power is disconnected from the navigation unit, the 4-digit anti-theft code must be entered on the navigation system display. This 4-digit code can be found on a small code card that was given to the client. Enter the 4-digit code, then select Done.

If the navigation system anti-theft code cannot be found, use the interactive Network (iN) to lock it up. You will need the serial number for the navigation unit to do this. You can view the serial number by entering the diagnostic mode. Select Unit Check from the main menu, then the Navi ECU diagnostic screen. This allows you to get the serial number without removing the navigation unit.

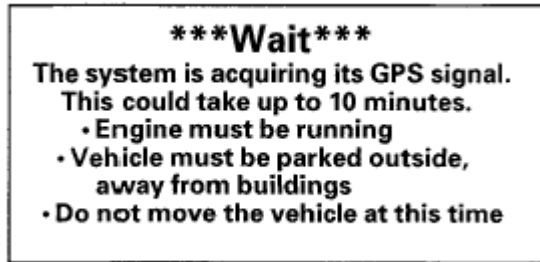

The iN may display more than one code for a given serial number. This is because serial numbers are not unique. You may have to try more than one 4-digit code. If no code is shown, or if the code(s) given do not work in the navigation unit, contact the Automobile Warranty department. If the code 0000 works, then replace the navigation unit.

When replacing the navigation unit or audio unit, be sure to give the client the new anti-theft security code.

GPS Initialization

NOTE: **You must park the vehicle outside with a clear view of the southern sky.**

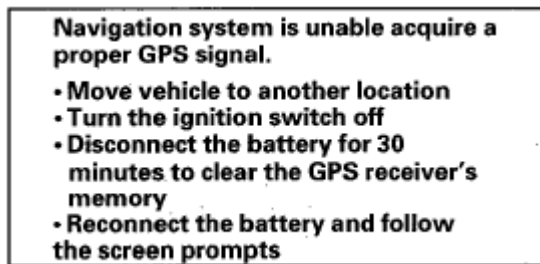

Depending on the length of time the battery was disconnected, your system may require GPS initialization. If it does, the following screen appears:

**Fig. 2: GPS Screen Display**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

If this procedure is not necessary the system proceeds directly to the Disclaimer screen. During initialization, the system searches for all available GPS satellites, and obtains their orbital information. During this procedure the vehicle should be out in the open with a clear view of the sky.

If the navigation system finds the satellites properly, this box clears, and changes to the Disclaimer screen. If within 10 minutes the system fails to locate a sufficient number of satellites to locate your position, the following screen appears.

**Fig. 3: Navigation Screen Display**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

If this screen is displayed, turn off the engine, then restart the vehicle and move it to a different location. If you now see the Disclaimer screen, the GPS initialization is complete.

NOTE:

- The average acquiring time is less than 10 minutes, but it can take as long as 45 minutes.
- If the system is still unable to acquire a signal, follow the instructions on the screen. If this screen appears again, go to troubleshooting for the GPS icon is white or not shown (see GPS icon is white or not shown).

Map Matching

This part of the initialization matches the GPS coordinates with a road on the map screen. To perform this part of the procedure, ensure that the navigation system is displaying a map, and drive the vehicle on a mapped road shown on the map screen. Do not enter a destination at this time. When the name of the current road you are driving on, appears at the bottom of the screen, the entire procedure is complete. Your system is now ready to

use.

Obtaining A Navigation DVD

If the Navigation DVD is lost or damaged, or you need a yearly updated DVD, you have 2 ways to purchase one. You can either call (888) 549-3798, or order on-line at www.acura.com.

Both methods require a credit card. The DVD for this model has a white label, and cannot be ordered through the parts system. The following DVDs will not work in this navigation system:

- Earlier model navigation DVDs (black label)
- Map software programs manufactured by other companies
- DVD movies, or DVDs containing audio recordings

Update DVDs are available for purchase usually in the fall of each year. They may contain the following:

- Enhanced maps and points of interest (POI) coverage
- Fixes for minor software bugs
- Additional features

NOTE:

- **Map matching must be done any time the DVD is removed or replaced.**
- **Always order navigation DVDs on an as-needed basis. During a typical model year, each color DVD may undergo a half a dozen software only version upgrades to fix minor issues on some or all models the DVD supports. This is normal. Usually only the letter at the end of the version number changes, while the database (maps and POIs) remain unchanged.**
- **Never promise your clients future free updates. There are no free programs for updating the navigation DVD. Update DVDs are generally available for purchase each fall. The on-time DVD order site provides information when an update for a particular color DVD is available.**
- **Damaged discs are not covered by warranty unless the disc is damaged by the navigation unit.**

DVD Handling and Cleaning

To avoid damaging or leaving fingerprints on the DVD, always handle it by the edges and place it in a jewel case whenever it is outside the navigation unit. Deep scratches or fingerprints on the back of the DVD can cause intermittent rebooting or other system errors.

**Fig. 4: Handling DVD**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Smudges and fingerprints can be carefully removed using a mild cleaner and tissues designed to clean eyeglasses. To clean a DVD, use a clean soft cloth. Very gently wipe across the DVD from the center to the outside edge, never in a circular motion.

**Fig. 5: Cleaning DVD**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do not place stabilizer rings or labels on the DVD.

Earliest DVD Version Application for Each Model

Each navigation system DVD contains a map/POI (point of interest) database and the navigation system software for each model that it supports. Inserting an older DVD can cause problems since it lacks the software to provide the specific features needed for that model. Unfortunately, the navigation software does not detect or warn you that the version is outdated, and it may even appear to operate.

NOTE: Replacing a DVD just because the version number is higher is not always warranted. A higher software version does not necessarily mean it contains newer software for your model. The DVD contains software for all models that use the same color DVD, and a revised number may or may not have software fixes or upgrades for the model in question.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Typical warning symptoms that an outdated DVD is being used include:

- The Acura model navigation screen may display a Honda logo while booting up.
- A newly introduced model feature or current accessory may not display properly, and Extension will display instead.

NOTE: **Extension may be displayed when using Music Link, but should never be displayed when XM is selected.**

- The current street (the street being driven on) may not appear properly at the bottom of the map screen display when the vehicle is driven on a main road.

NOTE: **If necessary, compare the operation to the navigation system of the same model and year vehicle that has a current DVD.**

How to Identify Navigation DVD Versions, and How to Inspect A DVD for Damage

To determine the navigation version on a particular model, start the engine, then locate the navigation unit. Open the DVD door, and push the eject button to eject the DVD. Hold the DVD by the edges, and check for these items:

- The label color.
- Read the DVD version on the label, and note it on the repair order. The version number is near the bottom of the label text (for example, ver: 4.23A). You will need this version number:
 - To verify that the DVD version is appropriate for the vehicle.
 - Any time you call Tech Line regarding a navigation system issue.
 - To answer client inquiries concerning update or coverage issue.

NOTE: **Clients may obtain DVDs from sources outside the normal ordering process. If you determine this is the case, recommend that your client purchase the appropriate DVD from the Acura Disc Fulfillment Center.**

- Check the underside of the DVD for signs of mishandling. Deep scratches, swirl marks, or fingerprints can cause random lock-ups, reboots, and DVD read or format errors.

NOTE: **A damaged DVD is not covered under warranty unless the disc is damaged by the navigation unit. Damage by the navigation unit typically appears as circular scratches caused by something rubbing against the DVD as it spins. The damage may appear as arcs or complete circles on the DVD reading surface.**

- Verify that the underside of the DVD is silver, and not a copy with a blue color. Copies will not work properly and can cause other symptoms that mimic hardware problems.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- Incorrectly colored DVDs being put into navigation vehicles. This causes the system to either display error messages, or it causes system malfunctions that mimic a hardware problem. This result in the client driving away with a malfunctioning navigation system.
- The DVD version provided to the client is out-of date or incompatible with a particular model. This inconveniences your client by delaying the repair, or by causing additional (and unnecessary) returns to your dealership.
- The client experiences bugs or other issues that have already been resolved in later versions currently available at the fulfillment desk.

If the DVD is defective, or has any of the issues mentioned above, return the vehicle to your client and recommend that they order the proper DVD from the Acura Disc Fulfillment Center.

NOTE: **If it is determined that the navigation unit is defective (through the appropriate service manual troubleshooting procedures) and the DVD will not eject, order a replacement navigation unit, and also order a DVD from the Acura Disc Fulfillment Center.**

How to Answer Client Questions About Navigation Coverage

Some clients may ask questions regarding a city, address or POI (point of interest) covered by the navigation system. It is better to verify a coverage question on an actual vehicle than to disappoint your client by promising coverage that may be incomplete or missing in their area. The following suggestions can be used to answer coverage inquiries from your client.

Is my address covered by the navigation system?

Using a current production vehicle (of the same model), try entering the client's address (street first) to see if their area is covered. Always enter the street first, because sometimes their city may be included in a neighboring township, or under some larger metropolitan city name. If the address is shown in a later year vehicle, but not your client's vehicle, you might want to recommend that your client purchase an update.

Is my city covered by the navigation system?

For general questions about whether a city is covered, view the map coverage link on the DVD order site. On the site, you enter a year and model, and then click on the Coverage link. You then select a state or province, and the cities are listed. Of course, this does not guarantee that the client's road or address is in the system. Verifying on an actual production vehicle is always the best guarantee that your information is accurate.

The gas station on my corner is now a restaurant. Why is it still incorrect in the navigation system?

For POI-related client questions, explain that businesses are constantly moving, and there can be a considerable lag in updating the millions of POIs in the system. The database is updated annually, and the best way to the verify whether the POI is accurate is verify the inquiry on a current production vehicle.

Answers to these and other questions regarding coverage can be found in these locations:

- In the Frequently Asked Questions section of the navigation system manual.
- At the on-line DVD order site, by clicking on the **FAQs** link.

How do I find the local address of a business that is part of a national chain (for example, Starbucks)?

There are three ways to find the local address to businesses:

- If you know the phone number of the business, select Phone Number and enter the 10 digit phone number (area code plus seven digit number).
- Select Category, then Restaurant. Enter the keyword Star. The resulting list includes all restaurants that have the letters Star anywhere in the name.
- Select Name and enter Starbucks. For more common business names, like McDonalds, you may have to search through a list that includes other businesses like McDonalds welding. McDonalds Automotive, etc.

Precaution on Client Sneak Previews

Your client might request a look (or sneak preview) at features in the latest navigation software; You should never preview a navigation DVD in a client's vehicle. Inserting a new DVD installs the latest software from the DVD into the memory of the client's navigation system. When the original DVD is reinstalled, the newer software remains in memory and is often incompatible with the client's original DVD Map and POI database.

If your client wishes to see the latest navigation coverage or software features, demonstrate it on an in-stock vehicle that already has the latest DVD version.

If, by chance, a newer version is located accidentally, either by the dealer or the client, the only remedy is to enter the navigation diagnostic mode's Version screen and do a forced download. Refer to the iN for applicable patches that may need reinstalling.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING CHART

Symptom	Diagnostic procedure	Also check for
Navigation system stays on the GPS initialization screen	System Initialization (see <u>SYSTEM INITIALIZATION</u>)	• Navigation unit • GPS antenna/cable is disconnected or damaged • The wrong color DVD is installed • The DVD is damaged or dirty • Harness/fuses/switches
Vehicle position icon constantly leaves road, moves erratically, or is very far from actual	Symptom Troubleshooting (see <u>VEHICLE POSITION ICON CONSTANTLY LEAVES ROAD, MOVES ERRATICALLY, OR IS VERY FAR FROM ACTUAL</u>)	• Navigation unit • GPS antenna/cable • PCM (speed and fuel pulses)

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

position	<u>POSITION)</u>	• Harness/fuses/switches
System always comes up in in-line diagnostic mode	See factory Diagnostic screen In-Line Diag (see <u>FACTORY DIAGNOSTIC SCREEN "IN LINE DIAG")</u>	
Navigation system will not accept security code	Symptom Troubleshooting (see <u>NAVIGATION SYSTEM WILL NOT ACCEPT SECURITY CODE)</u>	Wrong color DVD
Navigation frequently asks for anti-theft code and needs GPS initialization	Symptom Troubleshooting (see <u>NAVIGATION FREQUENTLY ASKS FOR ANTI-THEFT CODE AND NEEDS GPS INITIALIZATION)</u>	• Loss of voltage or poor ground (G 605) • Navigation unit • Low battery voltage • Harness/fuses/switches
GPS icon is white or not shown	Symptom Troubleshooting (see <u>GPS icon is white or not shown)</u>	• Navigation unit • Aftermarket accessories connected to the system • The wrong color DVD is installed • The DVD is damaged or dirty • GPS antenna/cable • Harness/fuses/switches
Vehicle icon wanders across the map when driving (does not follow a displayed road) or map or vehicle ICON spins	Symptom Troubleshooting (see <u>VEHICLE ICON WANDERS ACROSS THE MAP WHEN DRIVING (DOES NOT FOLLOW A DISPLAYED ROAD) OR MAP VEHICLE ICON SPINS)</u>	• Navigation unit • GPS antenna/cable • PCM (speed signal)
No picture is displayed	Symptom Troubleshooting (see <u>NO PICTURE IS DISPLAYED)</u>	• Navigation unit • Display unit • The wrong color DVD is installed • The DVD is damaged or dirty • Harness/fuses/switches
Picture has lines or rolls	Symptom Troubleshooting (see <u>PICTURE HAS LINES OR ROLLS)</u>	• Navigation unit • Aftermarket accessories connected to the system • Display unit • Harness/fuses/switches
		• Navigation unit • The wrong color DVD is installed

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Picture is missing a color or tone or is an odd color	Symptom Troubleshooting (see <u>PICTURE IS MISSING A COLOR OR TONE OR IS AN ODD COLOR</u>)	• The DVD is damaged or dirty • Display unit • Aftermarket accessories connected to the system • Harness/fuses/switches
Traffic information is not being shown on map screen	Symptom Troubleshooting (see <u>TRAFFIC INFORMATION IS NOT BEING SHOWN ON MAP SCREEN</u>)	• Client account status • Area outage • Area not covered • Traffic icons are turned OFF • AcuraLink (XM receiver) • Navigation unit • Low or weak battery • Harness/fuses/switches
Display day/night mode does not work	Symptom Troubleshooting (see <u>DISPLAY DAY/NIGHT MODE DOES NOT WORK</u>)	• Display brightness set to High in day or night mode • Display unit • Gauge control module (CAN) • The wrong color DVD is installed • The DVD is damaged or dirty • Harness/fuses/switches
System locks up or freezes constantly	Symptom Troubleshooting (see <u>SYSTEM LOCKS UP OR FREEZES CONSTANTLY</u>)	• Navigation unit • The wrong color DVD is installed • The DVD is damaged or dirty • Harness/fuses/switches
Voice guidance cannot be heard, is broken up, or there is static	Symptom Troubleshooting (see <u>GPS icon is white or not shown</u>)	• Volume or voice feedback setting (See Owner's manual) • Navigation unit • Audio unit/amplifier • Harness/fuses/switches

SYSTEM DESCRIPTION

OVERVIEW

The navigation system is a highly-sophisticated, hybrid locating system that uses satellites and a map database to show you where you are and to help guide you to a desired destination.

The navigation system receives signals from the global positioning system (GPS), a network of 24 satellites in orbit around the earth. By receiving signals from several of these satellites, the navigation system can determine the latitude, longitude, and elevation of the vehicle. In addition, signals from the system's yaw rate sensor and the PCM (vehicle speed pulse) enable the system to keep track of the vehicle's direction and speed of travel.

This hybrid system has advantages over a system that is either entirely self-contained or one that relies totally on the GPS. For example, the self-contained portion of the system can keep track of vehicle position even when satellite signals cannot be received. When the navigation system is on, the GPS can keep track of the vehicle position even when the vehicle is transported by ferry.

The navigation system applies all location, direction, and speed information to maps and calculates a route to the destination entered. As you drive to that destination, the system provides both visual and audio guidance.

This navigation system also has voice recognition that allows voice control of most of the navigation functions.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

The Navigation TALK and BACK buttons on the steering wheel activate the voice control. The voice control also allows control of the audio and climate functions.

The illumination signal (headlights ON) is used by the navigation unit to automatically switch the display between Night and Day brightness modes. When the instrument panel brightness control is set to full brightness (hold both "+" and "-" key at the same time), the navigation system stays in the day mode, even with the headlights on.

The GA-NET II communication bus passes information back and forth between the display panel control unit, the navigation unit and the RES/audio system. The information passed on this bus is audio climate control settings directed by the navigation unit.

The Comm. Bus connects the HFL, XM (HIP) (AcuraLink), and navigation units. This bus supports these functions:

- The navigation control unit receives traffic and AcuraLink message information from the AcuraLink Control unit.
- The navigation control unit sends a POI phone number (on the Calculate route to screen) to the HandsFreeLink control unit for dialing.
- If vehicle problems are detected, and the client's cellular contract includes data service, then the AcuraLink control unit can send vehicle data to the HFL unit for transmitting back to the AcuraLink servers.
- The AcuraLink server can pass additional problem details back through the AcuraLink Control unit, to the navigation unit for display.

System Diagram

Fig. 6: Navigation System Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NAVIGATION FUNCTION

The navigation system is composed of the navigation unit, the PCM (vehicle speed signal), the GPS antenna, the microphone, the voice control switch, the audio unit, the display unit, and the interface dial.

Function Diagram

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Fig. 7: Navigation System Function Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GA-Net Bus Configuration

The GA-Net bus passes audio and navigation commands throughout the navigation and RES/audio components. These commands include navigation audio/XM selections by voice, and XM station and music title names. Because the entire bus is interconnected between components, an open or short in the GA-Net bus harness may cause any or all of these functions to become inoperative.

Fig. 8: GA-Net Bus Configuration Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Vehicle Speed Pulse

The vehicle speed pulse is sent by the PCM. The PCM receives a signal from the countershaft speed sensor,

then processes the signal and transmits it to the speedometer and other systems.

Fig. 9: Communication Diagram Between PCM And Navigation Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Charge Signal and Navigation Unit Cooling Fan Operation

The ECM/PCM sends a charge signal to the navigation unit via F-CAN. A thermister inside the navigation unit monitors the units internal temperature. This information combined with charge signal determines the control units internal cooling fan operation.

Fig. 10: Charge Signal And Navigation Unit Cooling Fan Operation
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Yaw Rate-Lateral Acceleration Sensor

The yaw rate-lateral acceleration sensor (located in the navigation unit) detects the direction change (angular speed) of the vehicle. The sensor is an oscillation gyro built into the navigation unit.

Sensor Element Structure

The sensor element is shaped like a tuning fork, and it consists of the piezoelectric parts, the metal block, and the support pin. There are four piezoelectric parts: one to drive the oscillators, one to monitor and maintain the oscillation at a regular frequency, and two to detect angular velocity. The two oscillators, which have a 90-degree twist in the center, are connected at the bottom by the metal block and supported by the support pin. A detection piezoelectric part is attached to the top of each oscillator. The driving piezoelectric part is attached to the bottom of one oscillator, and the monitoring piezoelectric part is attached to the bottom of the other oscillator.

Oscillation Gyro Principles

The piezoelectric parts have electric/mechanical transfer characteristics. They bend vertically when voltage is applied to both sides of the parts, and voltage is generated between both sides of the piezoelectric parts when they are bent by an external force. The oscillation gyro functions by utilizing this characteristic of the piezoelectric parts and Coriolis force. (Coriolis force deflects moving objects as a result of the earth's rotation.)

In the oscillation gyro, this force moves the sensor element when angular velocity is applied.

Operation

1. The driving piezoelectric part oscillates the oscillator by repeatedly bending and returning when an AC voltage of 6 kHz is applied to the part. The monitoring-side oscillator resonates because it is connected to the driving-side oscillator by the metal block.
2. The monitoring piezoelectric part bends in proportion to the oscillation and outputs voltage (the monitor signal). The navigation unit control circuit controls the drive signal to stabilize the monitor signal.
3. When the vehicle is stopped, the detecting piezoelectric parts oscillate right and left with the oscillators, but no signal is output because the parts are not bent (no angular force).
4. When the vehicle turns to the right, the sensor element moves in a circular motion with the right oscillator bending forward and the left oscillator bending rearward. The amount of forward/rearward bend varies according to the angular velocity of the vehicle.
5. The detecting piezoelectric parts output voltage (the yaw rate signal) according to the amount of bend. The amount of vehicle direction change is determined by measuring this voltage.

Fig. 11: Top View Of Sensor Element
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Global Positioning System (GPS)

The global positioning system (GPS) enables the navigation system to determine the current position of the vehicle by using the signals transmitted from the satellites in orbit around the earth. The satellites transmit the satellite identification signal, orbit information, transmission time signal, and other information. When the GPS receiver receives a signal from four or more satellites simultaneously, it calculates the current position of the vehicle based on the distance to each satellite and the satellite's position in its respective orbit.

Position detection Image with GPS satellite

Position detection Image with GPS satellite

Fig. 12: Position Detection Image With GPS Satellite
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Four satellites on each of 6 orbits.

Precision of GPS

The precision of the GPS varies according to the number of satellites from which signals are received and the view of the sky. The precision is indicated by the color of the GPS icon shown on the display.

GPS PRECISION CHART

GPS ICON COLOR	NUMBER OF SATELLITES	CONDITION	DESCRIPTION
White GPS icon	None	Faulty	The GPS can't be utilized due to a faulty GPS receiver, open in the wire, or other fault or interference.
	2 or less	Impossible to detect vehicle position	GPS function is normal. The satellite signals received by the GPS are too few to detect the vehicle position.
Green GPS icon	3	Vehicle position detectable in 2 dimensions	The longitude and latitude of the vehicle position can be detected. (Less precise than detection in three dimensions)
	4 or more	Vehicle position detectable in 3 dimensions (elevation displayed)	The longitude, latitude and the altitude of the vehicle position can be detected. (More precise than detection in two dimensions)

GPS Antenna

The GPS antenna amplifies and transmits the signals received from the satellites to the GPS receiver.

GPS Receiver and Clock

The GPS receiver is built into the navigation unit. It calculates the vehicle position by receiving the signal from the GPS antenna. The current time, vehicle position and signal reception condition is transmitted from the GPS receiver to the navigation control unit to adjust vehicle position.

Navigation Unit

The navigation unit calculates the vehicle position and guides you to the destination. The unit performs map matching correction, GPS correction, and distance tuning. It also controls the menu functions and the DVD-ROM drive, and interprets voice commands. With control of all these items, the navigation unit makes the navigation picture signal, then it transmits the signal to the display panel control unit and audio driving instructions to the audio unit.

Calculation of Vehicle Position

The navigation unit calculates the vehicle position (the driving direction and the current position) by receiving the directional change signals from the yaw rate sensor and the travel distance signals from vehicle speed pulse (VSP) signal of the PCM.

Map Matching Tuning

The map matching occurs when you drive the vehicle along a mapped road until the road name appears of the bottom of the screen. The map data transmitted from the DVD-ROM is checked against the vehicle position data, and the vehicle position is indicated on the nearest road. Map matching tuning does not occur when the vehicle travels on a road not shown on the map, or when the vehicle position is far away from a road on the map.

GPS Tuning

The GPS tuning is accomplished by indicating the vehicle position as the GPS's vehicle position. The navigation unit compares its calculated vehicle position data with the GPS vehicle position data. If there is large difference between the two, the indicated vehicle position is adjusted to the GPS vehicle position.

Distance Tuning

The distance tuning reduces the difference between the travel distance signal from the VSP and the distance data on the map. The navigation unit compares its calculated vehicle position data with the GPS vehicle position data. The navigation unit then decreases the tuning value when the vehicle position is always ahead of the GPS vehicle position, and it increases the tuning value when the vehicle position is always behind the GPS vehicle position.

Route Guidance

The navigation unit can calculate different routes to a selected destination. You have five options:

- Direct Route-Calculate a route that is the most direct.
- Easy Route-Calculate a route that minimizes the number of turns needed.
- Minimize Freeways-Calculate a route that avoids freeway travel. If that is not possible, keep the amount of freeway travel to a minimum.
- Minimize Toll Roads-Calculate a route that avoids or minimizes travel on toll roads.
- Maximize Freeways-Calculate a route that uses freeways as much as possible.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Audio Guidance

The navigation unit transmits audio driving instructions before entering an intersection or passing a junction. The audio instructions come through the audio unit to the center speaker.

NOTE: **The front speakers are muted whenever the navigation system is giving guidance commands, and all of the speakers are muted when the voice control system is being used.**

Solar Angle

The climate control unit uses the sun's angle, along with the sunlight sensor, to control the driver/passenger A/C air flow.

Off Road Tracking (bread-crumbs)

Off road tracking dots that can be followed on the map to retrace your route back to a mapped (digitized) road.

Clock and Time Zone

The clock set up allows you to set daylight savings time, auto time zone and time adjustment.

Muting Signal Logic

The audio muting logic is orchestrated by the audio unit. The audio unit determines what audio source has priority to use the speakers.

The priority of the audio sources is as follows:

HandsFreeLink has the highest priority, followed by, AcuraLink, navigation, and finally the radio/CD-DVD player. The priority is passed by HandsFreeLink and AcuraLink to the audio unit by dedicated mute wires. The navigation mute signal is passed to the stereo amplifier.

The navigation unit temporarily disables the voice control buttons, but allows guidance to be heard. In addition, the audio unit suppresses the output from the audio unit, XM receiver, disc player, or other audio accessories.

When the navigation system sends out a voice route guidance command, the door speakers are muted, and the navigation voice is heard in the center speaker.

When the navigation voice control system is in use, all of the speakers are muted, and the navigation voice prompts are heard from the center speaker.

DVD-ROM

The DVD includes:

- Map Database

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- Point of interest (POI) Database
- Navigation software

Audio Unit

The audio unit receives the voice guidance instructions from the navigation unit, and transmits the instructions through the center speaker even when the audio system is in use.

NOTE: If the navigation volume and/or voice feedback is turned OFF, this feature is disabled.

Display Unit

The display unit uses a liquid crystal display (LCD). The LCD is a 8-inch-diagonal, thin film transistor (TFT), strip type with 336,960 picture elements. The color film and fluorescent light are laid out on the back of the liquid crystal film.

Fig. 13: Identifying Display Unit

System Set-up

SYSTEM SET-UP CHART

Illumination control	Priority	Operation	Override conditions
Display mode button	1	Allows selection of Day, Night or Off display mode. This button has the highest priority and overrides all other display control adjustments listed below.	When the car is restarted, the display mode previously selected by this button is canceled, and the display mode is determined by one of the controls below.
Sunlight Sensor (Middle of dash near		If the sunlight sensor detects daylight and the headlights are turned on, the navi automatically overrides (cancels)	If desired, use the Display mode

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

the windshield).(See Owner's manual for location)	2	the Night display and displays the Day display mode. Once the vehicle begins to move, after the word mode.	button to override this automatic choice.
Dash illumination adjustment knob (See Owner's manual for location)	3	When headlight are turned on, and you wish to have the Day display mode, then adjust the illumination to the full bright setting (beeps).	When the headlights are turned ON, adjust the dash brightness down (counterclockwise) from the maximum brightness position.
Headlights (On/Off)	4	When turned on, it changes the display to the Night display mode. The previous 3 controls listed above can cancel this function.	Use the Display mode button , or adjust the dash illumination to full bright to set the display to your desired choice.
Map Day/Night screen color choice	N/A	The user can select the color of the screen that will be displayed for the Day, and Night display modes described above.	For best contrast, ensure that the Map color is white for Day, and black for Night.

Recommended Display mode Day/Night settings:

- With the headlights on, select mid range for the dash illumination (See Owner's manual for location of knob).
- With the headlights off, select mid range for the dash illumination (See Owner's manual for location of knob).
- On the Setup Color adjustment screen, choose white for the map Day display, and black for the map Night display. Inappropriate adjustment of these colors can cause the Day/Night modes to appear inoperative.

Microphone (Mic)

Receives voice commands and transmits them to the navigation unit or HandsFreeLink unit for interpretation. Both system share the same microphone.

TALK Button

Activates the voice control system in the navigation unit to accept voice commands.

BACK Button

Returns the display to the previous screen (similar function as the CANCEL button).

Glossary

The following is a glossary of terms pertaining to the Voice Recognition Navigation System.

GLOSSARY OF TERMS

Item	Definition
AcuraLink	This device receives information from the XM satellites and passes XM audio information to the audio unit. In addition, traffic information is sent to

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

	the navigation unit.
Address Book	The HFL system can import a copy of the phone book from an approved HFL compatible phone and can display the imported phone book on the navigation screen as the address book. See the Owner's Manual for more information.
B-CAN	Body CAN Bus (see CAN)
Bread-crumbs (White dots)	Off road tracking dots that can be followed on the map to retrace your route back to a mapped (digitized) road. This function can be turned on/off in Setup screen 1.
CAN	Controller Area Network. This communication network allows processors in the vehicle to send/receive information. The fuel pulses used by the MID trip computer are received from the PCM using the F-CAN (Fast Controller Area Network) bus.
CPU	Central Processing Unit. The main device within the navigation unit that coordinates the rest of the electronic functions.
CSS	Countershaft (Output) Speed Sensor. This sensor reads the output shaft speed at the transmission and provides a speed pulse to the PCM.
Database	This consists of the Map data, and the POI (Points Of Interest) data stored on the DVD.
DBW	Drive By Wire. Allows electrical control of the throttle without the need of a mechanical linkage.
DCA	Detailed Coverage Area. Main metropolitan areas in the Lower 48 states, and Canada are mapped to this level. See the navigation system manual for a list of these areas.
DTC	Diagnostic Trouble Codes. Use the PGM Tester, or HDS tablet to obtain, and troubleshoot the cause of these codes.
Dead reckoning	The use of the speed signal, and yaw rate sensor to position the vehicle on the map even when tall buildings, or driving in a tunnel obscures the GPS signal
Digitized road	A road that appears on the navigation screen. The road name will appear at the bottom of the navigation screen. If the user drives off road the navigation system will display Not on a digitized road, and after 1/2 mile, the bread-crumbs will appear.
Disclaimer screen	Screen containing cautionary information. It is meant to be read carefully, and acknowledged by the

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

	client when using the navigation system.
DVD or DVD-ROM	Digital Versatile Disk. The navigation program and database resides on this disk. See the Navigation Owner's Manual for information on how to order a replacement or an update DVD.
ECM	Engine Control Module. Typically referred to as the ECM.
FAQ	Frequency Asked Questions. See the navigation system manual for a list of the client FAQs, and troubleshooting information.
F-CAN	Fast CAN Bus (see CAN)
GA-NET	The GA-NET allows the audio unit to communicate with all the audio and navigation components in a vehicle. If there is an open in the GA-NET, components or the entire audio and navigation system may appear inoperative.
GPS	Global Positioning System. A network of 24 satellites in orbit around the earth. The navigation system can simultaneously receive signals from up to 12 satellites to accurately position the vehicle on the map.
HDS	Honda Diagnostic System. A hand held tablet PC used for diagnosing vehicle problems. This device can be used to obtain DTC codes for diagnosis of the navigation system and CAN related problems.
HFL	HandsFreeLink uses Bluetooth technology as a wireless link between it and an approved Bluetooth compatible cell phone. See the vehicle Owner's manual or Quick Start Guide for more information.
HIP (AcuraLink)	Honda Information Platform (see AcuraLink)
H/U	Head Unit. The audio unit in the dash.
Initialization	This refers to the period needed to re-acquire the GPS satellite orbital information whenever the navigation system power has been disconnected. This can take from 10 to 45 minutes.
Interface Dial	This control device consists of a rotating knob and the buttons surrounding it. This device allows control of the navigation, audio, and climate functions displayed on the screen.
LCD	Liquid Crystal Display (the navigation screen)
Map matching	The received GPS information allows the navigation system to position the vehicle on the map. Map matching has occurred if the map screen is displaying the current street name in the bottom-shaded area.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Mic	Abbreviation for the microphone used for receiving voice commands. It is located near the map light in the ceiling.
MID	Multi-Information Display
MW	Maneuver Window. While on-route to a destination, this window displays information about the next maneuver.
Navi	Abbreviation for the Navigation System.
Off-road tracking	See bread-crumbs.
Off route	This occurs when the user leaves mapped roads. Off road tracking dots (bread-crumbs) are displayed if the option is enabled in the setup menu. The user can use them to return to a mapped road. The bottom of the navigation screen will say Not on a digitized road.
Outlying areas	These are rural areas that typically have only their main roads mapped. All other roads are shown in light brown for reference only, since they have not been verified.
Paired	Linking your cell phone to the HFL.
PC Card Slot	The PC Card (PCMCIA, type II) slot is for factory use only. Make sure that the sliding door is closed at all times, if opened, an error message is displayed on the screen.
PCM	Powertrain Control Module. This unit supplies the navigation system speed signal, Also referred to as PCM.
PCMCIA	A computer industry defined term referring to the PC Card slot standard.
PIN	Personal Identification Number, a random 4 digit number created by the client to protect personal information.
POI	Point Of Interest. These are the businesses, schools, etc. found under the places option on the main menu.
Polygon	Colored areas on the map screen denoting parks, schools, etc. See the Navigation System Manual Driving to Your Destination for a list of the assigned colors.
QWERTY	Keyboard layout resembling the typewriter keys. The keyboard layout can be changed to an alphabetical layout in the Setup mode.
SCS connector	The service check signal 2-pin connector used to put the navigation system into the diagnostic mode.
Security code	Code needed to activate the navigation system. You can get the security code from the iN by entering the

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

	navigation unit serial number. You can find the serial number on the diagnostic screens (unit check, Navi ECU), or on the underside of the navigation unit.
Tuning	A continual update of internal navigation system scaling factors. See the individual sensor tuning discussions under either System Description, or System Diagnosis Mode (see SYSTEM DIAGNOSTIC MODE) in this manual.
Unverified streets	These streets have not been verified for turn restrictions, one-way, etc. They are shown in light brown on the map. You can enter address destinations in these areas, but depending on your Unverified Routing choice in setup, voice guidance may end at the last verified street closest to your destination.
Verified streets	These streets consist of the detailed metropolitan coverage areas, and all other inter-town connection roads. These roads are shown in black or red on the map. (interstates are red)
VP	Vehicle Position. When in map mode, this circular icon shows the vehicle position on the map.
VR	Voice Recognition. This allows voice control of many of the navigation functions. The hardware consists of the microphone, voice control switch (TALK/BACK buttons), and the center speaker. See the overview for more information.
VSP	Vehicle Speed Pulse. This pulse signal coming from the PCM (via the CSS) is used to update the Vehicle position on the map. These pulses do not indicate direction (forward or backward). When in reverse, the navigation receives a signal and directs the VP to move backwards on the map.
XM	This device receives information from the XM satellites and passes XM audio information to the audio unit. In addition, traffic information is sent to the navigation unit.
Yaw sensor	This device is located in the navigation system control unit and senses the side-to-side twisting force generated when the vehicle turns. See a detailed description of how this sensor works in this manual.

System Function Diagram

This diagram shows the features of the navigation system starting at the center and working outward in layers.

The navigation program starts at Key ON, and then displays the globe screen. Once the disclaimer screen is acknowledged, the next shaded portions of the diagram become active. However, some functions of the INFO and SET UP buttons, and all functions of the AUDIO and A/C buttons can be accessed immediately after the globe screen (white).

The items above the map screen show various ways to set a destination, such as Go Home. Once you begin driving to your destination, you are provided with map/voice guidance, routing cautions (in unverified areas), and a directions list. While driving to your destination, use the voice control system as much as possible to interact with the navigation, audio, and climate control systems.

- ☐ Functions accessible at any time
- ☐ Disclaimer screen
- ☐ Map screen/voice commands to enter a destination
- ☐ Driving to your destination
- ☐ Voice commands while driving to your destination
- ☐ Globe screen

Diagnostic System Diagram

This diagram represents the diagnostic slice in the Navigation Functional diagram. The diagram shows an overview of the navigation diagnostic features starting at the center and working outward in layers. The diagram starts with Key on. The diagram shows two ways to get to the diagnostic main menu:

- By starting the vehicle with the SCS connector plugged in, you will enter the diagnostic System Links screen, select Return to get to the main diagnostic menu.
- From any of the navigation Map or Menu screens, press and simultaneously hold the keys Menu + Map + Cancel.

The diagram shows the available diagnostic menu choices, starting at the bottom left, and moving clockwise. In most cases, do not clear or change settings in any diagnostic screen unless instructed to do so in the explanation, or by the factory.

If the factory asks you to insert a PCMCIA memory card into the PC Slot, insert the PC card and the menu options referring to the PC card become available.

- Before troubleshooting, make sure you have anti-theft code for the navigation system.
- Check any official Honda service website for more service information about the navigation system.
- For problems with the rearview camera, do the rearview camera does not come on or work properly troubleshooting.
- Always make sure that the correct DVD color and version are installed.
- Inspect the DVD for dirt or damage.

1. Check the No. 5 (10 A), No. 7 (10 A) fuse and No. 32 (10 A) fuse in the under-dash fuse relay box, and reinstall the fuses if they are OK.

Are the fuses OK?

YES - Go to step 2.

NO - Replace the fuse and recheck.

2. Turn the ignition switch to ON (II).
3. Operate the radio and listen to the audio.

Can you hear the audio?

YES - Go to step 4.

NO - Check the ACC circuit.

4. Turn the ignition switch to ON (II).
5. Measure the voltage between body ground and navigation unit connector C (8P) No. 1 and No. 2 terminals individually.

NAVIGATION UNIT CONNECTOR C (8P)

Wire side of female terminals

Fig. 31: Identifying Voltage Between Body Ground And Navigation Unit Connector C (8P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 6.

NO - If the +B wire does not have voltage, repair open in the wire between the under-dash fuse relay box and the navigation unit. If the ACC wire does not have voltage, repair open in the wire between the under-dash fuse/relay box and the navigation unit.

6. Measure the voltage between navigation unit connector C (8P) No. 4 terminal and body ground.

NAVIGATION UNIT CONNECTOR C (8P)

Wire side of female terminals

Fig. 32: Identifying Voltage Between Navigation Unit Connector C (8P) Terminal 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES - Go to step 7.

NO - Repair open in the wire between the navigation unit and body ground (G605) (see **FLOOR WIRE HARNESS (RIGHT BRANCH)**).

7. Do the forced starting of the display (see **FORCED STARTING OF DISPLAY**).

Is the diagnosis menu of the picture diagnosis displayed?

YES - Go into the Diagnostic mode and use the Navi System Link diagnostic (see **NAVI SYSTEM LINK**) to check the links.

NO - Go to step 8.

8. Shield the display unit from the sun with your hand, and check that the display is back lit (only back light is ON.)

Can you see the back light?

YES - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**) and

retest. If the problem is still present, replace the navigation display unit (see **DISPLAY UNIT REMOVAL/INSTALLATION**).

NO - Go to step 9.

9. Measure the voltage between body ground and navigation display unit 20P connector No. 1 and No. 2 terminals individually.

Fig. 33: Identifying Voltage Between Body Ground And Navigation Display Unit 20P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 10.

NO - If the +B wire does not have voltage, repair open in the wire between the under-dash fuse relay box and the navigation display unit 20P connector. If the ACC wire does not have voltage, repair open in the wire between the under-dash fuse/relay box and the navigation display unit 20P connector.

10. Measure the voltage between the navigation display 20P connector No. 10 terminal and body ground.

Fig. 34: Identifying Voltage Between Navigation Display 20P Connector Terminal 10 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES - Replace the navigation display unit (see **DISPLAY UNIT REMOVAL/INSTALLATION**).

NO - Repair open or poor connections between the navigation display and body ground (G506) (see **DASHBOARD WIRE HARNESS (VIEW OF PASSENGER'S SIDE)**).

Vehicle position icon constantly leaves road, moves erratically, or is very far from actual position

NOTE:

- This is not the same condition as when driving off-road (or on a fire or logging road). This condition is caused by a loss of map matching from a bad sensor input. Check for aftermarket or other objects that can block the GPS signal. Always do the Map matching (see **MAP MATCHING**) before proceeding with the troubleshooting.
- Always make sure that the correct DVD color and version are installed.
- Inspect the DVD for dirt or damage.
- Check any official Honda service website for more service information about the navigation system.

1. Check the GPS icon on the navigation picture.

Is the GPS icon white?

YES - Do the troubleshooting for GPS icon is white or not shown (see **GPS icon is white or not shown**).

NO - Go to step 2.

2. Go into the Diagnostic Menu, and use the Yaw Rate test (see **YAW RATE**) to check the yaw rate sensor.
3. Go into the Diagnostic Menu, and use the Car Status test (see **CAR STATUS**) to check the vehicle speed pulse.

Are the yaw rate sensor and vehicle speed pulse OK?

YES - The problem may be normal. Check to see if the problem occurs in the same place. If it does, the problem could be in the database. Go to step 4.

NO - If the problem is the yaw rate sensor, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**). If the problem is the vehicle speed pulse, check for an open in the wire between the navigation unit and the PCM. If the wire is OK, troubleshoot the vehicle speed signal circuit.

4. Substitute a known-good navigation unit, and check to see if the problem occurs in the same place.

Does the problem occur in the same place?

YES - The problem is in the database. Report the problem according to the Navigation System Manual

under Reporting Errors.

NO - Replace the original navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Picture is missing a color or tone or is an odd color

NOTE:

- Always check the connectors for poor connections or loose terminals.
- Check for aftermarket accessories that may interfere with the navigation system.
- Make sure that the correct DVD color and version are installed.
- Inspect the DVD for dirt or damage.
- Check any official Honda service website for more service information about the navigation system.
- Check the navigation screen settings for brightness, contrast, black level and the color screen for map color and menu color.
- For problems with the rearview camera, do the rearview camera does not come on or work properly troubleshooting.
- Before troubleshooting, make sure you have anti-theft code for the audio system and the navigation system.
- Check the vehicle battery condition first.

1. Go into the Diagnostic Menu, and use RGB Color test under Monitor Check (see **MONITOR CHECK**).

Are the red, green, and blue colored circles shown?

YES - The system is OK at this time.

NO - Go to step 2.

2. Turn the ignition switch to LOCK (0).
3. Disconnect navigation unit connector A (20P) and the navigation display unit 20P connector.
4. Check for loose terminals at navigation unit connector A (20P) and the navigation display unit 20P connector.

Are there loose terminals?

YES - Repair the terminal.

NO - Go to step 5.

5. Check for continuity between the appropriate terminals of navigation unit connector A (20P) and the navigation display unit 20P connector based on the missing color(s).

CONNECTOR TERMINAL REFERENCE

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Wire side of female terminals

Fig. 36: Identifying Navigation Display Unit 20P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 6.

NO - There is an open in the circuit between the navigation display unit and the navigation unit. Check for poor connections or loose terminals at the navigation display unit and navigation units. If a poor connection or loose terminal is found, replace the affected shielded harness.

- Check for continuity between the appropriate terminals of navigation unit connector A (20P) and the navigation display unit 20P connector based on the missing color(s).

CONNECTOR TERMINAL REFERENCE

Missing color	Navigation unit connector A (12P)	Navigation display unit 20P connector
Blue	A11	10, 20

Green	A2	10, 20
Red	A1	10, 20

NAVIGATION DISPLAY UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 38: Identifying Navigation Display Unit 20P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - There is a short to body ground in the circuit between the navigation display unit and the navigation unit. Replace the affected shielded harness.

NO - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**). If the problem is still unresolved, replace the navigation display unit (see **DISPLAY UNIT REMOVAL/INSTALLATION**).

Picture has lines or rolls

Diagnostic Test: Monitor Check

- NOTE:
- Always make sure that the correct DVD color and version are installed.
 - Inspect the DVD for dirt or damage.
 - Check any official Honda service website for more service information

about the navigation system.

- **Always check the navigation screen settings for brightness, contrast, black level and the color screen for map color and menu color.**
- **Always check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, make sure you have anti-theft code for the audio system and the navigation system.**
- **Check the vehicle battery condition first.**
- **Always compare the screen image to a known-good vehicle. If the screen looks the same, inform the client that it is characteristic of the system.**

1. Check for electronic aftermarket accessories (possibly hidden) mounted near the navigation display unit or the navigation unit.

Are there any electronic accessories?

YES - Disable the accessories, and recheck.

NO - Go to step 2.

2. Start up the navigation picture.

Is the picture scrolling horizontally (left to right or right to left)?

YES - Check for an open or short to ground in the C SIG wire from navigation unit connector A (20P) No. 12 terminal to navigation display unit 20P connector No. 19 terminal. Also check for a short to ground between navigation display unit 20P connector No. 19 terminal and No. 20 terminal.

NO - Go to step 3.

3. Go into the Diagnostic mode, and use RGB Color diagnostic under Monitor Check (see **MONITOR CHECK**).

Is the picture missing a red, green or blue color?

YES - Do troubleshooting for the picture is missing a color or tone or is an odd color (see **PICTURE IS MISSING A COLOR OR TONE OR IS AN ODD COLOR**).

NO - Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Substitute a known-good navigation display unit (see **DISPLAY UNIT REMOVAL/INSTALLATION**), and recheck.

Is the picture OK?

YES - Check for loose connections, then replace the original navigation display unit (see **DISPLAY UNIT REMOVAL/INSTALLATION**).

NO - Check for loose connections and recheck. If a poor connection or loose terminal is found, replace the shielded harness. If no poor or loose terminals are found, substitute a known-good navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**) and recheck. If the problem is gone, replace the original navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Interface dial buttons do not work

NOTE:

- Always make sure that the correct DVD color and version are installed.
- Inspect the DVD for dirt or damage.
- Check the vehicle battery condition first.
- Confirm the correct DVD color and version disc is installed in the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**) as the wrong DVD or software version can cause a hardware malfunction.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have the anti-theft code for the audio system and the navigation system.
- After troubleshooting, enter the anti-theft codes for the audio system and the navigation system (if equipped).

1. Start the vehicle.
2. Go into the Diagnostic mode, and use Hard Key test under Unit Check (see **UNIT CHECK**).

Does the interface dial and/or joystick work properly?

YES - The system is OK at this time.

NO - Go to step 3.

3. Measure the voltage between the interface dial 5P connector No. 4 terminal and body ground.

INTERFACE DIAL 5P CONNECTOR

Wire side of female terminals

Fig. 39: Identifying Voltage Between Interface Dial 5P Connector Terminal 4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 4.

NO - Repair open in the wire between the under-dash fuse/relay box and the interface dial.

4. Measure the voltage between interface dial 5P connector No. 3 terminal and body ground.

INTERFACE DIAL 5P CONNECTOR

Wire side of female terminals

Fig. 40: Identifying Voltage Between Interface Dial 5P Connector Terminal 3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES - Go to step 7.

NO - Repair open in the wire between the interface dial and body ground (G506) (see **DASHBOARD WIRE HARNESS (VIEW OF PASSENGER'S SIDE)**).

5. Turn the ignition switch to LOCK (0).
6. Disconnect the interface dial 5P connector and the navigation unit connector A (20P).
7. Check for continuity between navigation unit connector A (20P) No. 17 terminal and interface dial 5P connector No. 1 terminal.

NAVIGATION UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 41: Identifying Continuity Between Navigation Unit A (20P) And Interface Dial 5P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 8.

NO - There is an open in the circuit between the interface dial and the navigation unit. Replace the affected shielded harness.

8. Check for continuity between navigation unit connector A (20P) No. 17 and No. 19 terminals.

NAVIGATION UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 42: Identifying Continuity Between Navigation Unit Connector A (20P) Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - There is a short in the wire. Replace the affected shielded harness.

NO - Go to step 9.

9. Substitute a known-good interface dial (see **DISPLAY UNIT REMOVAL/INSTALLATION**), and recheck.

Is the system OK?

YES - Replace the original interface dial (see **DISPLAY UNIT REMOVAL/INSTALLATION**).

NO - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

GPS icon is white or not shown

Diagnostic Test: Navi System Link

NOTE:

- With good reception, the icon is normally green.
- Make sure the GPS antenna is plugged in.
- Check for any aftermarket accessories that may be interfering with the GPS signal.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- **Make sure the vehicle is parked outside and away from buildings.**
- **Refer to GPS INFORMATION (see) for real time satellite reception display.**
- **Check the vehicle battery condition first.**

1. Check for metallic window tint on the windshield and electronic aftermarket accessories (possibly hidden) mounted near the GPS antenna or the navigation unit.

Is there metallic window tint or electronic accessories?

YES - Remove tint or the accessories and recheck.

NO - Go to step 2.

2. Turn the ignition switch to ON (II).
3. Go into the Diagnostic mode, and use the Navi System Link diagnostic (see NAVI SYSTEM LINK) to check the GPS antenna.

Is the GPS Ant icon red?

YES - Check for a kinked, crushed, or disconnected GPS antenna wire. If icon is still red, replace the GPS antenna.

NO - Check that nothing is blocking the GPS antenna located under the rear shelf and recheck. Substitute a known-good GPS antenna, and recheck.

- If the symptom is gone, replace the GPS antenna.
- If the symptom is still present, substitute a known-good navigation unit and recheck. If the symptom is gone, replace the original navigation unit (see NAVIGATION UNIT REMOVAL/INSTALLATION).

Voice guidance cannot be heard, is broken up, or there is static

Diagnostic Test: Navi System Link

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Inspect the DVD for dirt or damage.**
- **Check the navigation volume level (See Owner's manual).**
- **Check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, make sure you have anti-theft codes for the audio system and navigation system.**
- **After troubleshooting, enter the anti-theft codes for the audio system and navigation system.**
- **Check the vehicle battery condition first.**

1. Turn the ignition switch to ON (II).
2. Press the display unit SET-UP button.
3. Check the volume and voice feedback setting for the navigation system in set-up.

Is either set to OFF?

YES - Set the voice feedback to ON and select an audible level for the volume.

NO - Go to step 4.

4. Check the radio operation.

Can you hear the radio?

YES - Go to step 5.

NO - Troubleshoot audio system.

5. Go into the Diagnostic mode, and use the Navi System Link diagnostic (see **NAVI SYSTEM LINK**) to check the radio.

Is the Radio icon red?

YES - Troubleshoot the audio system.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect navigation unit connector B (14P) and the stereo amplifier connector A (28P).
8. Check for continuity between body ground and navigation unit connector B (14P) No. 5 and No. 12 terminals individually.

NAVIGATION UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 43: Identifying Continuity Between Body Ground And Navigation Unit Connector B (14P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the navigation unit and stereo amplifier units.
Replace the affected shielded harness.

NO - Go to step 9.

9. Check for continuity between navigation unit connector B (14P) No. 11 terminal and No. 5 and No. 12 terminals individually.

NAVIGATION UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 44: Identifying Continuity Between Navigation Unit Connector B (14P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the navigation unit and stereo amplifier units.
Replace the affected shielded harness.

NO - Go to step 10.

10. Check for continuity between navigation unit connector B (14P) No. 5 terminal and the stereo amplifier unit connector A (28P) No. 21 terminal.

NAVIGATION UNIT CONNECTOR B (14P)

Wire side of female terminals

STEREO AMPLIFIER UNIT CONNECTOR A (28P)

Wire side of female terminals

Fig. 45: Identifying Continuity Between Navigation Unit B (14P) And Stereo Amplifier Unit Connector A (28P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - There is an open in the circuit between the navigation unit and stereo amplifier. Check for poor connections or loose terminals at the stereo amplifier and navigation unit. If a poor connection or loose terminal is found, replace the affected shielded harness.

11. Check for continuity between navigation unit connector B (14P) No. 12 terminal and the stereo amplifier unit connector A (28P) No. 9 terminal.

Fig. 46: Identifying Continuity Between Navigation Unit B (14P) And Stereo Amplifier Unit Connector A (28P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - There is an open in the circuit between the navigation unit and the stereo amplifier. Check for poor connections or loose terminals at the stereo amplifier and navigation unit. If a poor connection or loose terminal is found, replace the affected shielded harness.

12. Substitute a known-good stereo amplifier, and recheck.

Is the system OK?

YES - Replace the stereo amplifier.

NO - Replace the navigation unit (see NAVIGATION UNIT REMOVAL/INSTALLATION).

Voice control does not work/respond

Diagnostic Test: Mic Level

NOTE:

- Make sure that the correct DVD color and version are installed.
- Check any official Honda service website for more service information about the navigation system.
- Before assuming that a voice complaint is hardware related, ensure that the voice control system is being operated correctly.
 - Make sure you are on the correct screen when trying to issue a voice command. For instance, the command Find the nearest Italian Restaurant only works on Map screen. (See the Navigation System manual for a complete list of allowed voice commands for the information being displayed).
 - Close the windows and sunroof.
 - Set the fan speed to low (1 or 2).
 - Adjust the air flow from the air conditioning vents so that they do not blow against the microphone on the ceiling.
 - Pause after pressing the TALK button then give a voice command clearly in a natural speaking voice. If the system cannot recognize your command, speak louder.
 - If the microphone picks up voices other than yours, the system may not interpret your voice commands correctly.
 - If you speak a command with something in your mouth, or your voice is too husky, the system may misunderstand your command.
- Check the connectors for poor connections or loose terminals.
- Check for a loose roof console microphone; if it's loose, tighten it.
- Before troubleshooting, make sure you have the anti-theft codes for the audio system and navigation system (if equipped).
- After troubleshooting, enter the anti-theft codes for the audio system.
- Determine if the problem only happens to one person, or everyone who uses the system.
- If the system only has a problem with one person's voice, this should be considered a system limitation.

1. Turn the ignition switch to ON (II).
2. Go into the Diagnostic Menu, and use the Mic Level test the under Functional Setup (see **FUNCTIONAL SETUP**) to check the operation of the TALK and BACK buttons.

Are the TALK and BACK buttons operational?

YES - Go to step 3.

NO - Check for an open or short to ground on navigation unit connector B (14P) No. 10 terminal.

3. Use the Mic Level diagnostic under Functional Setup (see **FUNCTIONAL SETUP**) to check the

operation of the microphone.

Is the microphone operational?

YES - Check the operation of the voice control system (see the Navigation System Manual).

NO - Check for a loose front map light (microphone) assembly. If OK, check for an open or short to ground on navigation unit connector B (14P) No. 6 and No. 14 terminals.

DVD screen error messages

Diagnostic Test: Car Status

NOTE:

- Confirm the correct DVD color and version disc is installed in the navigation unit (see NAVIGATION UNIT REMOVAL/INSTALLATION).
- Refer to General Troubleshooting for a list of common DVD screen error messages and the probable causes (see ERROR MESSAGE TABLE).
- Go into the Diagnostic mode and use the Car Status diagnostic (see CAR STATUS) to check the status of the DVD lid.
- Inspect the navigation DVD for scratches or damage.
- The following troubleshooting is for the error messages shown on the error message table (see ERROR MESSAGE TABLE).

1. Check the DVD-ROM reading surface for scratches and finger prints.

Are there any scratches or finger prints on the DVD-ROM reading surface?

YES - Clean or replace the DVD-ROM (see DVD-ROM Replacement).

NO - If the problem occurs occasionally when the system is cold, this is normal. If the problem occurs frequently when driving, replace the navigation unit (see NAVIGATION UNIT REMOVAL/INSTALLATION).

Navigation cannot control HVAC by voice command

NOTE:

- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Always check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have anti-theft codes for the navigation system.
- After troubleshooting, enter the anti-theft codes for the navigation system.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see VERSION).
- Make sure that the correct DVD color and version are installed.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- **Check on-line for service bulletins or other service information for the navigation system.**

1. Connect the HDS to the DLC. Check for B-CAN or F-CAN DTCs in the data list.

Are there any DTCs in the B-CAN or F-CAN systems?

YES - Troubleshoot and repair all CAN related DTCs, and then retest.

NO - Go to step 2.

2. Check the navigation system for normal operation.

Does the navigation system function normally in all other operations?

YES - Go to step 3.

NO - Refer to the navigation symptom troubleshooting. Troubleshoot and repair any other problems, then retest.

3. Disconnect climate control unit connector A (40P) and navigation unit connector A (20P).
4. Check for continuity between climate control unit connector A (40P) and navigation unit connector A (20P) according to the table.

CONNECTOR TERMINAL REFERENCE

Climate control unit connector A (40P)	Navigation control unit connector A (20P)	Wire color
A2	A4	YEL
A22	A14	RED
A21	A15	BLU

NAVIGATION UNIT CONNECTOR A (20P)

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 48: Identifying Climate Control Unit Connector A (40P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity on all wires?

YES - Go to step 5.

NO - Repair open in the affected wire(s) between climate control unit connector A (40P) and navigation unit connector A (20P).

5. Check for continuity between each wire in the navigation unit connector A (20P) according to the table.

CONNECTOR TERMINAL REFERENCE

Navigation control unit connector A (20P)	Wire color
A4	YEL
A14	RED
A15	BLU

NAVIGATION UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 49: Identifying Navigation Control Unit Connector A (20P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity to any other wire?

YES - Repair short in the affected wire(s) between climate control unit connector A (40P) and navigation unit connector A (20P).

NO - Go to step 6.

6. Check for continuity between navigation unit connector A (20P) and body ground according to the table.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

CONNECTOR TERMINAL REFERENCE

Navigation control unit connector A (20P)	Wire color
A4	YEL
A14	RED
A15	BLU

NAVIGATION UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 50: Identifying Navigation Control Unit Connector A (20P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity to ground?

YES - Repair short to ground in the affected wire(s).

NO - Go to step 7.

- Turn the ignition switch to ON (II).
- Measure the voltage between navigation unit connector A (20P) No. 4, No. 14, and No. 15 terminals and body ground.

CONNECTOR TERMINAL REFERENCE

Navigation control unit connector A (20P)	Wire color
A4	YEL
A14	RED
A15	BLU

1	2	3	4	5				9	10
11	12	13	14	15		17		19	20

Wire side of female terminals

Fig. 51: Identifying Navigation Control Unit Connector A (20P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.2 V to ground on any wire?

YES - Repair short to power on the affected wire(s).

NO - Go to step 9.

9. Substitute and a known-good climate control unit. Reconnect all connectors and retest.

Does the symptom go away?

YES - Replace the original climate control unit.

NO - Replace the navigation unit (see NAVIGATION UNIT REMOVAL/INSTALLATION).

Display day/night mode does not work

NOTE:

- Turn the headlight on the check that the dash brightness setting is not set to high.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have anti-theft codes for the audio system and the navigation system (if equipped).
- After troubleshooting, enter the anti-theft codes for the audio system and the navigation system (if equipped).
- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see VERSION).
- Always make sure that the correct DVD color and version are installed.
- Check any official Honda service website for, more service information about the navigation system.

1. Adjust the A/C using voice commands.

Can you control the A/C by voice command?

YES - Go to step 2.

NO - Do navigation cannot control A/C by voice troubleshooting.

2. Turn the headlights on, and adjust the dash brightness up and down, then to the middle range.

Does the display change to day and night modes when turning the headlights on and off?

YES - The system is OK at this time.

NO - Go to step 3.

3. Cover the sunlight sensor on the dash, then turn the headlight on and off.

Does the navigation display dim and brighten normally?

YES - The system is OK at this time.

NO - Check the ILL+ circuit for an open or short to ground between the navigation display to the gauge control module. If OK, substitute known good units in this order and recheck the system:

- Navigation unit
- Climate control unit
- Gauge control unit

System locks up or freezes constantly

NOTE:

- Check the GPS and VSP signals in the GPS information check (see GPS INFORMATION) and car status (see CAR STATUS).
- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have the anti-theft codes for the navigation system.
- After troubleshooting, enter the anti-theft codes for the navigation system.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see VERSION).
- Make sure that the correct DVD color and version are installed.
- Check any official Honda service website for more service information about the navigation system.
- Check the DVD for damage or scratches.

1. Start the engine, turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II).

Does the system reboot, lock up, or freeze?

YES - The system is OK at this time.

NO - Check the DVD for the correct color, software version, scratches or damage and the navigation unit for water damage. If OK, go into the Diagnostic mode and do all of the Unit Check diagnostics (see

UNIT CHECK). If all tests are OK, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Vehicle icon wanders across the map when driving (does not follow a displayed road) or map vehicle ICON spins

NOTE:

- This is not the same condition as when driving off-road (or on a fire or logging road).
- This condition is caused by a loss of map matching from a bad sensor input. Check for aftermarket or other objects that can block the GPS signal. Always perform Map matching (see **MAP MATCHING**) before proceeding with the troubleshooting.
- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have the anti-theft codes for the navigation system.
- After troubleshooting, enter the anti-theft codes for the navigation system.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see **VERSION**).
- Make sure that the correct DVD color and version are installed.
- Check any official Honda service website for more service information about the navigation system.
- Check the DVD for damage or scratches.

1. Check the GPS icon on the navigation picture.

Is the GPS icon white or missing?

YES - Do the troubleshooting for GPS icon is white or not shown (see **GPS icon is white or not shown**).

NO - Go to step 2.

2. Go into the Diagnostic mode and use the Yaw Rate diagnostic (see **YAW RATE**) to check the yaw rate sensor.

Is the yaw rate sensor OK?

YES - Go to step 3.

NO - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

3. Go into the Diagnostic mode and use the Car Status diagnostic (see **CAR STATUS**) to check the vehicle speed pulse (VSP) and the BACK signals.

Are the vehicle speed pulse and the BACK signals OK?

YES - The problem may be a characteristic of the system. Check to see if the problem occurs in the same place in a known-good vehicle. If it does, the problem could be in the database. Go to step 4.

NO -

- If the problem is the vehicle speed pulse, troubleshoot the vehicle speed signal circuit. BLU wire for open or short. If OK, swap a known-good PCM. If the problem or symptom goes away, replace the original PCM.
 - If the BACK signal is indicated ON (I), when in any shift lever position other than reverse, troubleshoot the back-up light switch circuit or MICU.
4. Substitute a known-good navigation unit and check to see if the problem occurs in the same place.

Does the problem occur in the same place?

YES - The problem is in the database and should be considered a characteristic of the system. Report the problem according to the Navigation System Manual under Reporting Errors and look for improvements in future databases.

NO - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Navigation system will not accept security code

NOTE:

- **The system will not operate without the 4-digit security (anti-theft) code. Follow the this procedure. (After 10 consecutive tries, you must cycle the key to continue trying)**
- **The Navigation System Diagnosis and Core Return Form is available online, under Job aids and can be printed out for recording this information. This information will help the Reman facility determine what caused the failure.**
- **Check for and resolve all CAN DTCs before troubleshooting the navigation system.**
- **Check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, make sure you have the anti-theft codes for the navigation system.**
- **Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see **VERSION**).**
- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the vehicle battery condition first.**

1. Go into the System diagnosis menu (see **START-UP PROCEDURE AND DIAGNOSTIC MENU**),

select Unit check, and then Navi ECU. A brief diagnostic will run for 20 seconds, and the serial number is then displayed.

Is the serial number displayed?

YES - Go to step 2.

NO - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

2. Obtain the Serial Number (3 letters followed by 8 numbers) from the label on the underside of the navigation unit (not the display unit). Using the Serial Number, look up the navigation security code in the Interactive Network, (click: Service, Vehicle Information, Anti-Theft code Inquiry, and then select Navigation from the product dropdown box). Enter the serial number.

Is a 4-digit code displayed?

YES - Go to step 3.

NO - Call the Warranty Department, the telephone number is listed in the PDI/TQI bulletin, to obtain the code. Then go to step 4.

3. Check the obtained code work to bypass the code screen.

Does the code work?

YES - The system is OK at this time.

NO - Go to step 4.

4. Try entering four zeros (0000) in place for the code.

Do the four zeros work to bypass the code screen?

YES - Replace the control unit, and enter Security code is 0000 in the problem description field of the core return form.

NO - Replace the control unit, and enter Won't take security code (as proof, enclose the sticker that contains the Serial number and the Code) in the problem description field of the core return form.

Navigation display stays on with ignition switch OFF

NOTE:

- **Check for aftermarket accessories that may interfere with the navigation system.**
- **Check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, get the navigation system anti-theft codes.**

- After troubleshooting, re-enter the anti-theft code, and re-initialize the navigation system.
- The vehicle may have been used for a show event. Check for a short jumper harness in-line with the navigation unit connector C. If a jumper harness is present, remove it and return it to Tech Line.

1. Remove the key from the ignition.

Does the navigation screen stay on?

YES - Go to step 2.

NO - The system is OK at this time.

2. Check for a short to power on navigation unit connector C (8P) No. 2 terminal.

Is there a short?

YES - Troubleshoot the ACC circuit.

NO - Replace the navigation unit (see NAVIGATION UNIT REMOVAL/INSTALLATION).

Navigation cannot control audio/disc/rear entertainment

Diagnostic Test: Navi System Link

NOTE:

- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have the anti-theft codes for the navigation system.
- After troubleshooting, enter the anti-theft codes for the navigation system.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see VERSION).
- Make sure that the correct DVD color and version are installed.
- Check any official Honda service website for more service information about the navigation system.

1. Turn the ignition switch to ON (II).
2. Make sure the anti-theft code for the audio system is entered.
3. Go into the Diagnostic mode, and use the Navi System Link diagnostic (see NAVI SYSTEM LINK).

Is the Radio icon red?

YES - Do the troubleshooting for the voice guidance cannot be heard (see **GPS icon is white or not shown**).

NO - Go to step 4.

4. Substitute a known-good navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**), and recheck.

Can the navi control audio/disc?

YES - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO - Do the audio system troubleshooting.

Rearview camera image does not come on or work properly

NOTE:

- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, make sure you have the anti-theft codes for the navigation system.
- After troubleshooting, enter the anti-theft codes for the navigation system.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see **VERSION**).
- Make sure that the correct DVD color and version are installed.
- Check any official Honda service website for more service information about the navigation system.
- Check the vehicle battery condition first.

1. Turn the ignition switch to ON (II), and start the engine.

Does the Navigation screen come on and show an image when the vehicle is started?

YES - Go to step 2.

NO - Go to troubleshooting for **NO PICTURE IS DISPLAYED** .

2. Go into the diagnostic menu and use the Navi System Link test (see **NAVI SYSTEM LINK**) to check the connection between the navigation unit and the rearview camera.

Is the R-camera link on the screen?

YES - Go to step 3.

NO - Go to step 12.

3. Confirm the system connection.

Is the R-camera link red on the screen?

YES - Go to step 4.

NO - Go to **CAR STATUS** and check the BACK-Reverse indication status .

4. Check the connections between navigation unit connector D (7P) and the rearview camera connector (6P).

Are the connections OK?

YES - Go to step 5.

NO - Reconnect the connectors.

5. Disconnect navigation unit connector D (7P) and rearview camera connector (6P).
6. Check for continuity between the navigation unit connector D (7P) and the rearview camera connector (6P) according to the table.

CONNECTOR TERMINAL REFERENCE

Navigation unit connector	Rearview camera	Wire color
D1	6	WHT
D5	3	BLK
D7	1	RED
D6	2	GRY

NAVIGATION UNIT CONNECTOR D (7P)

Wire side of female terminals

REARVIEW CAMERA CONNECTOR (6P)

Terminal side of male terminals

Fig. 52: Identifying Navigation Unit D (7P) And Rearview Camera Connector (6P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 7.

NO - Repair open in the wire between navigation unit connector D (7P) and rearview camera connector (6P).

7. Check for continuity between navigation unit connector D (7P) and body ground according to the table. Then check for continuity between the navigation unit connector D (7P) No. 6 terminal, rearview camera 6P connector No. 2 terminal and same terminals.

CONNECTOR TERMINAL REFERENCE

Navigation unit connector	Wire color
D1	WHT
D5	BLK
D7	RED

NAVIGATION UNIT CONNECTOR D (7P)

Wire side of female terminals

Fig. 53: Identifying Navigation Unit Connector D (7P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between navigation unit and the rearview camera, or replace the appropriate shielded harness.

NO - Go to step 8.

8. Turn the ignition switch to ON (II), and measure the voltage between navigation unit connector D (7P) and body ground according to the table.

CONNECTOR TERMINAL REFERENCE

Navigation unit connector	Wire color
D1	WHT
D5	BLK
D7	RED
D6	GRY

NAVIGATION UNIT CONNECTOR D (7P)

Wire side of female terminals

Fig. 54: Identifying Navigation Unit Connector D (7P) Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES - Repair short to power in the wire between navigation unit and the rearview camera, or replace the appropriate shielded harness.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Reconnect the rearview camera connector (6P).
11. Substitute and connect a known-good navigation unit and check the rearview camera image in reverse.

Is the rear view image OK?

YES - Replace the original navigation unit.

NO - Replace the rearview camera.

12. Press the Return in the upper light corner of the screen to return the main menu, then go to **VERSION**.
13. Check the model code that is displayed.

Is the correct navigation unit model code displayed for this vehicle?

YES - Go to step 14.

NO - The wrong navigation unit is installed. Replace the navigation unit with the correct part.

14. Remove the DVD disc from the navigation unit and check the label color of the DVD disc.

Is the DVD disc label white (or possibly gray for Canada)?

YES - Reinsert the DVD disc, and go to step 4.

NO - Replace the DVD disc with the correct color. See the Obtaining a Navigation DVD in the General

Troubleshooting Information (see **GENERAL TROUBLESHOOTING INFORMATION**).

Navigation cannot control XM radio

Diagnostic Test: Navi System Link

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the vehicle battery condition first.**

1. Start the vehicle.
2. Make sure the anti-theft code for the audio system is entered.
3. Go into the Diagnostic mode, and use the Navi System Link diagnostic (see **NAVI SYSTEM LINK**).

Is the "XM" icon red?

YES - Do the troubleshooting for the voice guidance cannot be heard (see **GPS icon is white or not shown**).

NO - Go to step 3.

4. Substitute a known-good navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Can the navi control XM radio?

YES - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO - Do the audio system troubleshooting.

Navigation frequently asks for anti-theft code and needs GPS initialization

NOTE:

- **This is often caused by a loss of battery power or a poor ground.**
- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Turn the ignition switch to LOCK (0).
2. Disconnect navigation unit connector A (8P), and check for loose terminals.

Are any of the replace the terminals loose?

YES - Repair or replace the loose terminal(s).

NO -Go to step 3.

3. Turn the ignition switch to ON (II).
4. Measure the voltage between body ground and navigation unit connector C (8P) terminals No. 1 and No. 2 individually.

NAVIGATION UNIT CONNECTOR C (8P)

Wire side of female terminals

Fig. 55: Measuring Voltage Between Body Ground And Navigation Unit Connector C (8P) Terminals No. 1 And No. 2 .

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 5.

NO -If the +B wire does not have voltage, repair open in the wire between the under-hood fuse/relay box and navigation unit connector C (8P). If the ACC wire does not have voltage, repair open in the wire between the driver's under-dash fuse/relay box and navigation unit connector C (8P).

5. Measure the voltage between navigation unit connector C (8P) terminal No. 4 and body ground.

NAVIGATION UNIT CONNECTOR C (8P)

Wire side of female terminals

Fig. 56: Measuring Voltage Between Navigation Unit Connector C (8P) Terminals No. 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.2 V or less?

YES -Replace the navigation unit(See NAVIGATION UNIT REMOVAL/INSTALLATION).

NO -Repair open or high resistance in the wire between navigation unit connector C (8P) and body ground (G605)(See CONNECTOR TO HARNESS INDEX .

Traffic information is not being shown on map screen

If your client complains that traffic is not being displayed, it could be because a traffic setting is not correct.

NOTE:

- Check for and resolve all CAN DTCs before troubleshooting the navigation system.
- Check the connectors for poor connections or loose terminals.
- Before troubleshooting, get the navigation system anti-theft codes.
- After troubleshooting, enter the navigation system anti-theft codes.
- Verify that the correct navigation unit is installed for this model. Go into the Diagnostic mode and use Version (see VERSION).
- Make sure that the correct DVD color and version are installed.

- Check any official Honda service website for more service information about the navigation system.
- Check the vehicle battery condition first.
- A marginal battery or poorly performing charging system may cause the XM/HIP unit to malfunction.
- The vehicle is equipped with an auto start feature that keeps the starter motor engaged, even when you release the ignition switch. Due to the ignition design, if a client releases the ignition switch before the engine starts, the XM/HIP unit may receive unusually low voltage. This may cause the XM/HIP to malfunction. When starting the vehicle, hold the ignition switch in the START (III) position until the motor starts.

1. Test the battery condition (see **BATTERY TEST**).

Is the battery in good condition ?

YES - Go to step 2.

NO - Troubleshooting the battery and/or charging system and recheck.

2. Park the vehicle outside where you have a clear view of the southern sky.
3. Turn the ignition switch to LOCK (0).
4. Start the engine by holding the ignition switch in the START (III) position until the engine starts to override the auto-start feature.
5. Check the real-time traffic display of a known-good vehicle to make sure that the XM NavTraffic is being broadcast in your area.

You may have to wait 5 minutes for the traffic display to refresh. Is real-time traffic shown on the map of the known-good vehicle ?

YES - Go to step 6.

NO - Call Acura Client Services at (800) 382-2238, and check to see if there are any traffic system outages or blackouts in your area.

NOTE: **Some cities feature incident icons only. A temporary lack of incident icons may give the impression that the system is not working properly.**

6. Make sure the client's XM NavTraffic account status is active. This account is separate from the regular XM radio subscription, and it has a separate fee. For the '07-08 MDX, real-time traffic is free for the first 3 months.

To check the XM NavTraffic account status:

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- Call XM Satellite Radio at (800) 852-9696.
- Make sure you have:
 - VIN
 - XM Radio ID (shown on channel 000)
- From the automated phone menu, select tech support.
- Inform the agent that you are working on an Acura vehicle, and ask them to check the XM NavTraffic account status. It is possible the client owns more than one vehicle capable of displaying real-time traffic. Have the agent confirm that the XM NavTraffic subscription applies to the vehicle VIN you are working on.

Is the XM NavTraffic account status active?

YES - Go to step 7.

NO - If the free trial period is expired, return the vehicle to the client, and inform them how to renew their XM NavTraffic subscription by calling XM Radio at (800) 852-9696.

- If the free trial period has not expired, call XM Radio at (800) 852-9696 and reactivate the account for the remainder of the free trial period, then request a rapid refresh. To do a rapid refresh:
 - Park the vehicle outside in a clear area with the engine running.
 - Turn the audio system on, and tune to an XM radio channel.
 - Wait 30 minutes
- If the vehicle now receives real-time traffic information, return the vehicle to the client .

7. Updating the AcuraLink unit software.

Are there any applicable product updates or service bulletins?

YES - Do the applicable product updates and service bulletins, then retest the vehicle. If real-time traffic does not work. Go to step 4.

NO - Go to step 8.

8. Verify that you are receiving a signal from XM:

- Park the vehicle outside with a clear view of the southern sky.
- Turn on the audio system, and tune to XM channels 000, 001, 174, or 247.

Can you tune XM channels 000, 001, 174, or 247?

YES - Go to step 9.

NO - Refer to the applicable service manual, troubleshoot the XM radio, and retest. if real-time traffic does not work, go to step 5.

9. Make sure the navigation map is set to either the 1/2, 1, 2, or 5 mile scale, if the scale is not set to one of these values, either rotate the interface dial knob, or use the zoom in/zoom out buttons to adjust the map to proper scale.

Fig. 57: Identifying Navigation Map Scale

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do you see real-time traffic on the navigation display?

YES - Return the vehicle to the client, and explain the proper settings.

NO - Go to step 10.

10. Make sure the real-time traffic settings are correct.
- Press the **map/guide** button, then select the **map menu** by pressing in the selector button.
 - Select **Show Icon on Map** by turning the interface dial, then pressing in the selector button.
 - Select the **Traffic** icon from the **icon selection bar** at the bottom of the navigation display. The icon should turn **solid blue** when you select it. If it does not turn solid blue, go to step 7.
 - Select **icon options** by pushing the selector to the right.
 - From the **Select category for icon settings** menu, select the **Traffic** choice.
 - Select **traffic speeds** by pressing in the selector on the **Select Traffic info** screen. It should turn **solid blue**. Turn the interface dial to select **Traffic** icons, and press in the selector in again. Both **Traffic speeds** and **Traffic Icons** must be **solid blue**. Push the selector to the right (**DONE**) to complete the process.

Do you see real-time traffic on the navigation display?

YES - Return the vehicle to the client, and explain the proper settings.

NO - Go to step 11.

11. Do the diagnostic mode checks:
- Start the vehicle, and enter the navigation diagnostic mode by pressing and holding the **Menu**, **Map/Guide**, and **Cancel** buttons.

- Select **Navi System** from the **Navigation Diagnosis Items** menu, and verify that all the icons are green. If any links/icons are red, refer to the applicable service manual for repair information, then go to step 12.
- Return to the main **Navigation Diagnosis Items** menu and select **XM (HIP)** , then select **XM (HIP) System Link** , and verify that the links/icons are green. If any links/icons are red, refer to the applicable service manual for repair information, then go to step 12.

12. Confirm the Traffic Channel settings of the AcuraLink unit.

- Return to the **XM (HIP)** diagnostic menu.
- Select the **XM (HIP) ECU** choice.
- Select the **Traffic channel** choice.

NOTE: **Do not touch of select the *Data Reset* choice.**

- Confirm the settings:
 - SID = 255
 - APP ID = 8
- Adjust the setting(S) if necessary as any other setting will prevent real-time traffic from displaying. Press the **cancel** button twice to return to the **XM (HIP)** diagnostic menu Select the on-screen **Return** button to fully exit the diagnostic mode.
- Turn the vehicle off. Wait 20 seconds, and start the vehicle.
- Park the vehicle outside with a clear view of the southern sky, and verify you are receiving an XM radio signal (see step 8).

Do you see real-time traffic on the display?

YES - Return the vehicle to the client.

NO - Go to step 13.

13. Reset the AcuraLink unit:

- Make sure you have the anti-theft codes for the audio system and the navigation system.
- Turn the ignition switch to LOCK (0), then pull the back-up fuse from the underhood fuse/relay box. For underhood fuse/relay box location, refer to the applicable service manual. Wait 2 minutes, then re-install the fuse.
- Start the vehicle.
- Enter the anti-theft codes for the audio system and the navigation system.
- Let the navigation system boot, then select one of the traffic scales (1/2, 1, 2, 5 miles).
- Park the vehicle outside with a clear view of the southern sky, and verify you are receiving an XM radio signal (see step 8).

Do you see real-time traffic on the navigation display?

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

YES - Return the vehicle to the client.

NO - Go to step 14.

14. Substitute a known-good AcuraLink control unit, and retest the vehicle.

Park the vehicle outside with a clear view of the southern sky, and verify you are receiving an XM radio signal (see step 8).

Do you see real-time traffic on the navigation display?

YES - Replace the original AcuraLink control unit. Register the new AcuraLink control unit with XM radio and Acura Client Services. Return the vehicle to the client.

NO - Substitute a known-good navigation control unit. If the problem goes away, replace the original navigation control unit.

The Honda Globe Screen appears every time the vehicle is started

NOTE: **The navigation DVD and the navigation unit are correct for the vehicle, but earlier and possibly later versions of the navigation software may have been installed. When this happens, the software may not be recognized by the navigation unit, and could cause the navigation unit to revert to a Honda model profile.**

1. Remove the navigation unit and verify that the parts number printed on the navigation unit label is the correct one for the year/model vehicle you are working on.

Is the correct navigation unit installed based on the parts number?

YES - Go to step 2.

NO - Replace the navigation unit with the correct unit for the year/model vehicle you are working on.

2. Reinstall the navigation unit.
3. Remove the navigation DVD.
4. Note the software version marked on the DVD label and verify if it is the correct version for the vehicle year/model you are working on by checking any official Honda service Web site for more service information about the navigation system and navigation software.

Is the software version marked on the DVD label the correct one for the vehicle year/model you are working on?

YES - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO - Go to step 5.

5. Obtain the correct version DVD (see **MAP MATCHING**) and install it.

Does the navigation system boot-up with the Acura Globe Screen?

YES - The problem is resolved, troubleshooting is complete.

NO - The system still shows Honda Globe Screen. Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Navigation unit will not eject or accept the navigation DVD

1. Check No. 5 (10 A) and No. 32 (10 A) fuses in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 2.

NO - Replace the blown fuse(s) and recheck.

2. Turn the ignition switch to ON (II).
3. Eject the DVD from the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

Does the navigation DVD eject?

YES - Go to step 4.

NO - Go to step 5.

4. Reinsert the navigation DVD into the navigation unit.

Does the navigation unit accept the navigation DVD?

YES - No problems at this time, the system is normal. Inspect for loose or poor connections at No. 1, No. 2 and No. 4 terminals of navigation unit connector C (8P).

NO - Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

5. Measure the voltage between navigation unit connector C (8P) No. 4 terminal and body ground.

NAVIGATION UNIT CONNECTOR C (8P)

Wire side of female terminals

Fig. 58: Identifying Voltage Between Navigation Unit Connector C (8P) Terminal 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES - Go to step 6.

NO - Repair open or high resistance in the BLK wire between navigation unit connector C (8P) and body ground (G605).

6. Measure the voltage between navigation unit connector C (8P) No. 1 terminal and body ground.

NAVIGATION UNIT CONNECTOR C (8P)

Wire side of female terminals

Fig. 59: Identifying Voltage Between Navigation Unit Connector C (8P) Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the navigation unit (see [NAVIGATION UNIT REMOVAL/INSTALLATION](#)).

NO - Repair open in the WHT wire between navigation unit connector C (8P) terminal No. 1 and the No. 5 (10 A) fuse in the under-dash fuse/relay box.

SYSTEM DIAGNOSTIC MODE

START-UP PROCEDURE AND DIAGNOSTIC MENU

There are two ways to enter the diagnostic mode:

1. Connect the SCS connector (see **FORCED STARTING OF DISPLAY**) to the navigation service connector located in the trunk. Then turn the ignition switch to the ON (II). The display will go directly to the diagnostic menu screen shown below.

NOTE: When finished troubleshooting, make sure to remove the SCS connector.

2. Turn the ignition switch ON (II). Use the navigation display hard buttons as described below:

Make sure the battery is in good condition, then press and hold the three buttons (Menu, Map/ Guide, and Cancel), and keep them pressed for approximately 5 seconds. The display screen will go directly to the Select Diagnosis Items menu shown below.

Fig. 60: Diagnosis Screen Display - System Diagnostic Items Menu
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. After the display changes to the Select Diagnosis Items menu, select the item you want to check and the diagnostic will start. To return to the previous screen, select Return.
 - Navi System (Link)
 - Monitor Check
 - Unit Check
 - Car Status
 - XM (HIP)
 - GPS Information
 - Yaw Rate
 - Tire Calibrate
 - Functional Setup
 - Version

FACTORY DIAGNOSTIC SCREEN "IN LINE DIAG"

NOTE: If the vehicle left the factory in the factory diagnostic mode, you will see this

screen every time you turn on the ignition.

When a navigation control unit is powered up for the first time at the factory or after replacement with a new or remanufactured navigation unit, the factory diagnosis screen (In Line Diag) shows up. Normally the factory done the steps necessary to verify proper operation and terminate the factory diagnostic. Until the proper confirmation sequence is done, the screen will show up every time the vehicle is started.

Fig. 61: Diagnosis Screen Display - In Line Diag
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Follow the steps below to prevent the screen from showing up in the future:

- Press and hold the buttons (Menu + Map/Guide + Cancel) for about 5 seconds (the Select Diagnosis items screen appears).
- Press and hold the Map/Guide button for 5-10 seconds (A screen with a Complete button, appears).
- Select Complete, then Return, and then turn the key off for 5 seconds. Do not disconnect the battery during this period as the unit is saving the setting to the SRAM memory. The In Line Diag should not appear again.
- Restart the vehicle, and confirm normal operation by completing the TQI of the Navigation System Service Bulletin.

NAVI SYSTEM LINK

- This diagnostic tests the cables connecting the navigation components. Ensure that the ignition switch is in the ON (II) position. When the diagnostic begins, you hear a bong sound. The system is in a Detecting mode, and is waiting for all items in white to be tested. This includes the navigation voice control (TALK/BACK) buttons, and microphone. Press the navigation TALK button on the steering wheel, and in a normal voice, say testing. The TALK indicator on the screen should turn green, and the voice level indicator should move to at least the 6th bar to pass. Next, press the navigation BACK button. The Back indicator should turn green.
- If all of the communication lines connecting the system components, and the navigation TALK/BACK buttons/microphone check out OK (all block diagram items green), then the OK indicator turns green.
- If there is a problem with the system, the faulty system component item turns red, and the screen will show NG in red. Use the troubleshooting index, and other diagnostic screens to help locate the problem.
- The indication on the screen may not change until you cycle the ignition switch. After repairing the affected cable or system, repeat this diagnostic.

NOTE:

- Green boxes and a green OK indicate that the communications lines (cables) are intact. This diagnostic does not necessarily imply that the individual components are functioning properly. For instance, the GPS antenna wire may be crushed, but still show as green. A road test, or other diagnostic may be necessary to find the problem.
- A green box and link to the AcuraLink control unit (XM receiver) does not mean that the unit is receiving traffic information. Always verify that the client's account status is active, and compare to a known-good vehicle to ensure that there isn't local coverage problem.
- Select Return to return to the Diagnosis Menu.

USA model

Fig. 62: Diagnosis Screen Display - Navi System Link (USA Model)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Canada model

Fig. 63: Diagnosis Screen Display - Navi System Link (Canada Model)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- The mic level indicator must reach the 6th bar or greater to pass the test.
- If the XM link is red or flashing red, go to audio system symptom troubleshooting (see SELF-DIAGNOSTIC FUNCTION), or see XM (HIP) diagnostic screen.

Overview of display unit

- The illumination cancel signal is provided by the gauge via B-CAN to the HVAC unit, then to the navigation unit via the U-ART bus.
- The display unit communicates with the navigation unit over its own GA-Net bus. Information sent by the navigation unit to the display unit includes commands to control the LCD back light.
- The security system protects the navigation display unit by daisy-chaining the security signal through it, and then passing the signal to the audio unit.
- The illumination input from the gauge brightness control provides back lighting for the buttons surrounding the screen.

These screens allow you to troubleshoot the display unit. Select the item you want to troubleshoot, and follow the diagnostic instructions.

- RGB color
- Gray Tone
- White Raster
- Black Raster
- Color Pattern
- Monitor Adjustment

Fig. 64: Diagnosis Screen Display - Monitor Check
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RGB Color

This screen verifies that the display unit is receiving the video (R, G, B and Composite sync) signals properly. The three primary colors should all be shown without distortion. The combination of all three should produce a central white section. If any of the colors are missing, troubleshoot for the color signal (see **PICTURE IS MISSING A COLOR OR TONE OR IS AN ODD COLOR**). If the picture has lines in it or scrolls horizontally, or vertically, troubleshoot for a Composite sync problem (see **PICTURE HAS LINES OR ROLLS**).

Fig. 65: Diagnosis Screen Display - RGB Color
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Gray Tone

This screen diagnoses problems with contrast. You should be able to see the changes from bar to bar across the scale. It is normal for the two bars on either side to appear the same.

Fig. 66: Diagnosis Screen Display - Gray Tone
Courtesy of AMERICAN HONDA MOTOR CO., INC.

White Raster

This diagnostic screen checks for pixels that may be dead (off). The entire display must be white. If there are dead pixels, replace the navigation unit.

Fig. 67: Diagnosis Screen Display - White Raster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Black Raster

This diagnostic screen checks for pixels that may be stuck on. The entire display must be black. If pixels are stuck on, replace the navigation unit.

Fig. 68: Diagnosis Screen Display - Black Raster

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Color Pattern

The chart below shows the colors being used for the map and menu screens. This is for factory use only. To check the color signal use the RGB Color diagnostic found under the Monitor Check.

**Fig. 69: Diagnosis Screen Display - Color Pattern**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Monitor Adjustment

This allows you to center the navigation display. Use the joystick to move the picture up/down or left/right. It is unlikely that you will ever need to adjust the monitor position. The Default button will reset the display position to factory specifications.

**Fig. 70: Diagnosis Screen Display - Monitor Adjustment**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Unit Check

To start the test, select the item you want to check starts.

- Display
- Radio
- Navi ECU
- PC Card Info
- Hard Key
- Smart Card

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Fig. 71: Diagnosis Screen Display - Unit Check

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Display

This diagnostic does additional checks on the communication bus between the control unit and the display. In addition, the internal electronics functionality are confirmed.

- When the connection is NG, first check for loose terminals at the navigation unit and the display unit connections. Next check for an open or short in the communication line between the navigation unit and the display unit. If you find the line has an open or short, replace the affected shielded harness.
- If the ROM or RAM is NG, replace the display unit.
- The version represents the software version in the display.

Fig. 72: Diagnosis Screen Display - Display

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Radio

If the NG is indicated, check for loose audio unit connector.

NOTE: If the XM link was displayed red, but the radio link was displayed green in the navigation system link, refer to audio system symptom troubleshooting.

Fig. 73: Diagnosis Screen Display - Radio
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Navi ECU

This screen looks for problems with the navigation unit. When you initiate this diagnosis, the navigation unit may delay up to a minute while the diagnosis runs.

NOTE: Do not try to end this diagnostic by pressing OK or Mem clear before it finishes, otherwise the system may reboot.

- If V-RAM or D-RAM is NG, then replace the navigation unit.
- If GPS indicates NG (ANT), then check the entire GPS antenna wire from the navigation unit to the antenna. If the wire is crushed or damaged, try a known good antenna. If this diagnostic reads OK, then order a new GPS antenna. If the diagnostic still reads NG (ANT), then replace the navigation unit.
- DVD ROM represents the database version on the DVD. You can find this information in either the Setup Screen Version, or in the Diagnostic Screen Version.
- Serial No. should be the same as the serial number found on the underside of the navigation unit. You need this number to obtain the security code from the Interactive Network (iN) system.
- The Mem Clr is for factory use and should not be used unless instructed by the factory.

Selecting this will clear the client's settings, personal information, GPS orbital data, and anything else stored in memory.

Fig. 74: Diagnosis Screen Display - Navi ECU
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

PC Card info.

There is no PC Card in the PC slot, and the screen should say, PC Card is not inserted.

NOTE: Do not insert any card or object into the slot.

Fig. 75: Diagnosis Screen Display - PC Card Info.
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If the factory provides a PC card and instructs you to insert a card, then the screen displays the Manufacturer, and Product Name as shown in the following screen.

Fig. 76: Diagnosis Screen Display - PC Card Info.
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Hard Key

This diagnostic tests the interface dial, and the buttons that surround it. For this model, the interface dial and buttons do not use the GA-Net bus for communications.

To complete the test, touch each button on the vehicle's control panel, and move the interface dial to each indicated position. As each function is tested, the corresponding button on the display should highlight. To exit, push in and hold the selector knob.

NOTE: You cannot use the onscreen return button to exit this function.

Fig. 77: Diagnosis Screen Display - Hard Key

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Smart Card

If the smart card is being used, you can check the card condition.

**Fig. 78: Diagnosis Screen Display - Smart Card**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Car Status

Use this screen to confirm that the navigation unit is properly receiving input signals. Signals equal to (0) are OFF, and signals equal to (1) are ON. If the value on the display does not match the actual vehicle status, then check the wire carrying the signal.

- VSP-Vehicle Speed Pulse from PCM (Pin 6 of C-connector)
 - a. OFF (0) when vehicle is not moving
 - b. ON (1) when vehicle is moving

The VSP comes from the PCM as a dedicated signal. Internally, the navigation unit compares the actual VP on the map against street data to adjust the pulse to speed scaling factor. As this scaling factor becomes more accurate, the Level gradually increases from 0 to 10 (see the Tire Calibrate diagnostic screen).

- BACK-Reverse indication from taillight relay (Pin 5 of C-connector)
 - a. OFF (0) when the shift lever is in any position other than reverse
 - b. ON (1) when the shift lever is in reverse

The Back signal is used by the navigation unit to allow the map screen to show the VP moving backwards when in reverse. This signal is needed because the Speed Pulse has no direction indication.

Fig. 79: Diagnosis Screen Display - Car Status

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- ILL CANCEL

This function is not applied to this model.

- ILL-Illumination Indication (Pin 5 of navigation unit A-connector)
 - OFF (0) when parking lights, or headlights are off
 - ON (1) when parking lights, or headlights are on

The navigation uses the signal to determine whether to put the navigation screen into the Day or Night brightness mode. (Setup screen 1)

- DVD Lid-senses if the DVD door is open
 - (Close) when the door is closed
 - (Open) when the door is open

The navigation unit has a micro switch to detect this. If open is indicated when the door is closed, replace the navigation unit.

GPS Information

This screen shows the current status of GPS reception. The circular diagram shows the current location of the GPS satellites (yellow numbers) as they would appear in the sky. The outer circle represents the horizon (0 degrees elevation). The middle and inner circles represents 30 and 60 degrees respectively. The very center of the diagram (90 degrees elevation) is directly overhead. Nearby obstructions, like tall buildings will block satellites in that direction. That is why it is necessary to be in an open area to effectively troubleshoot GPS reception issues. The satellite numbers shown on the diagram correspond to the PRN number in the GPS Details screen. There are always at least 24 active GPS satellites in orbit. Because satellites fail, and have to be removed from service, spares are always parked in orbit, ready to be activated. This is why the PRN (satellite ID number) can be greater than 24.

NOTE: To use this screen for troubleshooting, the vehicle should be outside away from buildings, tall trees, and high-tension wires for at least 10 minutes with the engine running.

- The Number of Satellites box shows the number of acquired satellites (maximum of 12). It should contain four or more icons. If not troubleshoot for GPS icon is white or not shown (see **GPS icon is white or not shown**).
- The Current Position shows latitude, longitude, and elevation (in feet). If there are less than four satellites, the elevation can be grossly inaccurate.
- The Date/Time field shows the current date, and also GMI time.

Fig. 80: Diagnosis Screen Display - GPS Information
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Pressing the map guide button displays the satellite number on each circle.

GPS Detail

By pressing and holding the MENU button for 10 seconds, a GPS Detail screen appears. This screen displays real time incoming satellite positional data when the vehicle is outside in the open. The information shown on this screen is for factory use.

Fig. 81: Diagnosis Screen Display - GPS Detail
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- The box TS/AS and H Dop/V Dop is for factory use.
- The Speed and Direction information is updated in real time when driving.
- The Date/Time Information is the same as in Setup screen 2 Adjust Time Zone/Clock.
- If the 3D icon is shown above the yellow dots, this implies that at least four satellites are available for map positioning, and the GPS indicator on the map screen will be green. See the Global Positioning System detailed explanation in the System Description.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

- If the row of data in the table below begins with a yellow dot, the AZI and EL fields can be used to locate each satellite on the circular GPS diagram (see prior screen).

NOTE: The data shown in the GPS Detail screen is an example only.

The table of values shown on the screen below has the following columns:

GPS DETAIL CHART

Column	Description	Problem indication
Active	Active satellites (Yellow Dot)	If 3D or 2D is missing when the vehicle is parked outside, do the GPS icon is white or not shown troubleshooting (see <u>GPS icon is white or not shown</u>).
PRN	The satellite ID number	
ST	The status: 0 = cannot view or searching, 2 = acquiring	If all 0, then, do the GPS icon is white or not shown troubleshooting (see <u>GPS icon is white or not shown</u>).
AZI	Azimuth, the angle (0-360) clockwise from north	
EL	Elevation from the horizon (90 deg is overhead)	
C/N	N/A	Healthy signal is 49-52, no signal: 27-33
ACC	N/A	
delta 1/2 or 2/2 delta	Shows view of all satellites in two screen views 1/2 or 2/2	

Yaw Rate

This diagnostic checks the yaw rate sensor in the control unit. This device detects when the vehicle turns, and repositions the vehicle position icon on the map screen. For more detailed information, see the yaw rate sensor theory of operation under System Description (see **OPERATION**).

- Sensor indicates the voltage output from the yaw rate sensor. It should indicate about 2.500 volts when stopped.
- Offset is the reference voltage or standard within the yaw rate sensor. It also should indicate about 2.500 volts when stopped.
- A sensor output voltage LOWER than the Offset voltage indicates that the vehicle is turning to the right.
- A sensor output voltage HIGHER than the Offset voltage indicates that the vehicle is turning to the left.
- The yaw rate offset, and sensor should both indicate about 2.500 volts when stopped. If either reads zero, or 5.000 volts, replace the navigation unit.
- The yaw rate offset and sensor should be within +/-0.01 V of each other when stopped. The sensor value should change relative to the offset as the car is turned while driving. If not, replace the navigation unit.

Example: Car stopped

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Normal

Offset	2.526 V
Sensor	2.516-2.536 V

Abnormal

Offset	2.526 V
Sensor	2.623 V

Example: Car turning

Normal

Offset	2.526 V
Sensor	2.678 V (left turn) 2.478 V (right turn)

Abnormal

Offset	2.526 V
Sensor	2.623 V (no change on turns)

- Sensitivity study represents the status of the internal tuning function. At initialization, this value starts at 6 and increases to # 10 as the internal correction values become more accurate.
- The settings CCW Cal Factor, CW Cal Factor, and Set are for factory use only. THIS SHOULD NEVER BE ADJUSTED.
- For detailed analysis of the yaw rate select tuning.

Fig. 82: Diagnosis Screen Display - Yaw Rate

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Yaw Rate Tuning

This diagnostic allows you to graphically display problems with the yaw rate sensor.

- The ANG-Disp value accumulates any differences between the offset, and sensor voltages (see Yaw Rate diagnostic). When the sensor is functioning normally, the random changes in these two voltages generally cancels out, so the value is 0. However if one voltage is consistently higher than the other, then the ANG-Disp value accumulates the constant change.
- The Reset button temporarily clears the angular accumulation (ANG-Disp), and clears the display dots.
- Do not touch the CCW, CW, or Set buttons. These are used for factory setup only.

Two tests are explained below. For gross problems with the sensor, the stationary test usually confirms whether the sensor is defective. For yaw rate issues related to driving, do the road test described below.

1. Stationary test: If the VP icon spins in place and the ANG-Disp value slowly increases or decreases, the yaw rate sensor is defective. Replace the navigation control unit.
2. Road test: Drive the vehicle on a very straight road. Enter the diagnostic mode, select Yaw rate, and touch

the Tuning button. While driving down a straight road, the white dots should trace a straight line across the screen. However, if you are driving on a straight road, and you notice the dots constantly dropping down or heading up as you drive, the navigation control unit's yaw sensor is defective. You can touch Reset to clear ANG-Disp, and dotted lines.

If either test above fails, please enter Yaw rate sensor defective for the problem description, on the Navigation core return form.

Fig. 83: Diagnosis Screen Display - Yaw Rate Tuning
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Tire Calibrate

As the vehicle moves, the navigation system receives speed pulses from the PCM. These pulses are converted using a conversion factor to a mph speed that moves the vehicle position (VP) on the map. The navigation system has an internal tuning function that generates and refines this factor based on actual driving. The Study indicates the status of the tuning. At navigation initialization, it begins at 0, and increases to 10 as the navigation system is used.

- The Auto Tuning is factory set to ON, and should remain on.
- The Study indicates the tuning status. If it is less than 10, the unit is still calibrating.
- The Tire-Cal. Tuning and Set should not be used. It is for factory use only.

Fig. 84: Diagnosis Screen Display - Tire Calibrate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Functional Setup

Select the item you want to check.

- Log Data

- GPS Send Time
- Demo Mode
- Mic Level
- Solar Angle
- Save Users Data

Fig. 85: Diagnosis Screen Display - Functional Setup
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Solar Angle

This screen graphically displays the sun's position as determined by GPS. The HVAC system uses the navigation systems sun's angle, along with the sunlight sensor to control the driver/passenger A/C airflow. The heat that the climate control unit removes varies, depending on the angle of the sun entering the vehicle. This screen is for factory use only, and should not be adjusted.

- The screen shows a circular diagram of the sky oriented in the direction that the vehicle is pointing. During daylight hours a red dot is shown, representing the direction and elevation of the sun. The outer circle represents the horizon (0 degrees elevation). The middle circle is 30 degrees, the center circle is 60 degrees, and the very center is directly overhead (90 degrees).
- The manual tuning button should always be OFF.
- The Angle is the angle that the sun (shown with red dot) is above the horizon.
- The vehicle value represents the angle, clockwise from North, to the direction that the vehicle position (VP) icon is pointing (always points straight up).
- The direction value is the angle, measured clockwise from the VP (straight up) to the sun's position.
- The reliability ranges from 1 to 3, and represents the accuracy of the Vehicle Position relative to the sun.

Fig. 86: Diagnosis Screen Display - Solar Angle

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Log Data

This screen allows the factory to select log data to troubleshoot navigation system issues.

- Normally there is no card in the PC Card Slot, and the PC slot door should always be closed. The screen should appear as shown.

**Fig. 87: Diagnosis Screen Display - Log Data**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- However, if the factory provides a PC card and instructs you to insert it into the card slot (label side up). If instructed by the factory, select Gyro. Sensor Logs ON. Follow the factory procedure for gathering test data, and properly ending the test.

**Fig. 88: Diagnosis Screen Display - Log Data**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Send GPS Time

This screen is for factory use only. It allows adjustment of the GPS time. This display updates in real time.

- GPS Time is the time as received from the GPS satellites. It is in Greenwich Mean Time (GMT).
- Date, Hour, Minute, and Set should not be used.

Fig. 89: Diagnosis Screen Display - Send GPS Time
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Demo Mode

This screen is for factory use only, and should always be set to OFF. Occasionally the DEMO setting is turned ON when vehicles are being used at Auto Shows or similar events. Turning this feature on, allows the navigation system to automatically follow a route to a destination when the vehicle is stationary. The Speed changes the speed of the demo mode.

Fig. 90: Diagnosis Screen Display - Demo Mode
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mic Level

This diagnostic allows you to independently test the microphone and the NAVI TALK and BACK buttons. They are used to activate the voice control system. The microphone is located near the map light in the roof console. It is directional, and works best with the voice coming from the drivers seat.

- Press the TALK button on the steering wheel, and in a normal voice say testing. The TALK indicator on the screen should momentarily turn green, and the text Now Recording... should appear in yellow. If the TALK indicator on the screen does not briefly turn green, then check the wiring from the steering wheel TALK button to the navigation unit. If there is no Mic Level movement when you speak, then you should check the wires running from the microphone in the roof console to the HFL unit and the navigation unit. If the wires are OK, the microphone must be faulty; replace the roof console (see **HEADLINER REMOVAL/INSTALLATION**).
- Press the BACK button on the steering wheel. This should cause the BACK indicator on the screen to momentarily turn green. If it does not briefly turn to green, then check the wiring from the steering wheel BACK button to the navigation unit.

Fig. 91: Diagnosis Screen Display - Mic Level
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Version

This screen displays the current version information for the navigation system software. In addition, this screen allows the loading of updated software if requested by the factory, or instructed by a Service Bulletin. Software may be loaded from a CD or a PC card.

- Program Flash: Displays the version of the navi software in memory.
- Program Disc: If displayed, this value represents the version of the navi software on the navi DVD.

NOTE: The last two letters of the Program Flash or DVD fields indicate which DVD is installed in the unit. The letters KA imply that a United States DVD is installed. If the letters are KC, then a Canada DVD is installed. (See coverage discussion below.)

- IPL, APL, DBOOT, and System uCom, are all for factory use.
- Model: For this model, the field should begin with STX.
- Download: Do not touch, unless instructed by the factory.

Fig. 92: Diagnosis Screen Display - Version
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

There are two navigation DVDs produced for this model.

- The white DVD labeled United States is for the US market and contains maps for the contiguous 48 US states, and some southern portions of Canada. Clients wanting additional northern coverage in Canada,

can purchase a Canada, DVD by contacting the DVD fulfillment desk.

- The gray DVD labeled Canada, is for the Canada market, and contains maps for all of Canada, plus some of the northern US states. If clients with this DVD require full US coverage (including states like Florida and Texas), they may purchase a United States DVD by contacting the DVD fulfillment desk.

XM (HIP)

These screens allow troubleshooting of XM or HIP (AcuraLink) problems. Select the item you want to troubleshoot, and follow the diagnostic instructions.

Fig. 93: Diagnosis Screen Display - XM (HIP)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

XM (HIP) System Link

This diagnostic tests the cables connecting the XM (HIP) components.

Fig. 94: Diagnosis Screen Display - XM (HIP) System Link
Courtesy of AMERICAN HONDA MOTOR CO., INC.

XM (HIP) ECU

Select the item you want to troubleshoot, and follow the diagnostic instructions.

NOTE: Only select DATA RESET when instructed. Selecting DATA RESET will clear the AcuraLink registration, and the AcuraLink service will reset to the factory default. If the vehicle was already registered for the AcuraLink service, it will have to be reactivated by calling Acura Client Services before all features will be available. The reactivation will cause the Feature Guide to start over at the

first message, which will result in the client getting repeated messages.

Select Telematics diagnosis item

Fig. 95: Diagnosis Screen Display - Telematics Diagnosis Item
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Telematics Self-Diagnosis

This screen used to do self-diagnosis for the XM (HIP).

Fig. 96: Diagnosis Screen Display - Telematics ECU
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC Log Data

You can check the DTC log data in this screen.

Select the DTC logdata

Fig. 97: Diagnosis Screen Display - DTC Log Data
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: When DTC B2200-B2249 is displayed. It is in engineering mode and is not for trouble diagnosis.

Save users Memory

When replacing the navigation unit, this function allows the dealer to transfer the client's personal data to the new navigation unit

This is similar to saving and entering the client's audio presets when replacing an audio core. The transferred information includes their Setup settings, and personal addresses. The dealer inserts a PC card (like the PC card in the HDS), and then selects the Save users Memory function. The two functions in this diagnostic screen are Export and Import saves the client's data to the PC card, and Import moves the PC card files to the new core.

See the FAQs below for information regarding PC cards, and the use of this function.

Fig. 98: Diagnosis Screen Display - Save Users Memory
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Export

Select this button to move the client's data from the original navigation unit to the PC card. Select YES on the Export User Data Confirmation screen. The process takes only a couple of seconds. The system stores two small files on the card.

Fig. 99: Save Users Memory Screen Display - Export
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Import

After installing the client's original DVD in the new core, allow the system to boot up. Insert the PC card in the new core and enter the navigation diagnostic mode.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Fig. 100: Save Users Memory Screen Display - Import
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Select YES on the Import Confirmation screen.

Import moves the two files stored by the Export process from the PC card to the new navigation unit. When the transfer is finished (a few seconds) the system will automatically reboot. After the system reboots, remove the PC card from the PC slot.

If the Import button is grayed out, follow the troubleshooting in the FAQs below. The client's files can only be transferred to a new core if the Model and the Program Flash shown on the Version screen are the same. These files cannot be transferred from TSX to MDX, or from a MDX with version 1.07.00 to a MDX with version 1.32.00.

PC Card FAQs

PC CARD FAQs

Question	Answer
Where do we buy the flash memory or adaptors, and what do we ask for?	You needs a PCMCIA type II adaptor and a flash memory chip (see below for memory chip types). They can be purchased at a computer, or office supply store. The card will have the same size and shape as the PC card in the HDS. Adaptors that accept multiple flash types are not recommended.
What memory flash chips will work with what adaptors?	The flash memory devices that have been tested include Compact Flash (CF), and ATA style (like the card in the HDS). Other card types and flash memory chips may work, but have not been tested.
What capacity card do I need for this function?	A memory chip with capacity of 64 MB to 2 GB will work. The two files moved to the card during export are less than a Megabyte in size. An adaptor and flash memory can be obtained for less than 50 dollars.
Should the dealer have a dedicated card for the Export and Import navigation function?	Yes, treat the card as a dedicated special tool that should be used anytime a '07 or later vehicle needs the navi personal files transferred to a new ECU core.
What device can I use to maintain the card, and delete files	Any computer store sells USB style PC card readers that accept the card, and allow you to perform file maintenance on your card. Most laptops will also accept the card.
Can we move the client's data to different models (like	No, the files are model specific and will only load into a navi ECU with

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

moving TSX navi data to a MDX)?	the same part number.
Can we move the client's data to the same vehicle with a different software version? (Like moving version 4.51)	The client's files can only be transferred to a new core, if the Model and the Program Flash shown on the Version screen are the same. Files cannot be transferred from TSX to MDX (different model code), or '07 MDX to '08 MDX (different versions)
The Export button is grayed out. Why?	• A PC card with its media memory chip is not inserted properly. • Check the card's edge connector, and the pins inside the navigation unit (with a flashlight) for damage
The Import button is grayed out. Why is this?	• A PC card with it's media memory chip is not inserted • The model code of the files stored during export do not match the model code of the new navi ECU • The version of the files from the original navi ECU are not the same as the version in the new ECU
Will other files on the card like images or music files prevent the Export/Import function from working?	No, the system simply adds two small files that are recognized by the new core when performing the Import function. However, if the card is full, the Export function won't work correctly.
Do I have to delete the files on the card after each transfer of the client's data?	After the transfer of client data to the new core, the files remain on the card. Since this is confidential information, we recommend that you delete these files after each use. Please note that each time you export navi files of the same model and version, the files are overwritten. If you do not delete the files after use, over time the card will accumulate two files for each version of the 5 or so Acura navi models.
What format should be used if the card needs reformatting?	It is unlikely that the card will ever need formatting, however the FAT file system should be used
I can't enter the navi diagnostic mode to do the Export/Import function. How can I transfer the client's data?	Some internal navi ECU failures may make it impossible to use the Export/Import function.
	• The card may not be fully inserted into the slot. Eject the card, and inspect for warping or damage to the edge connector. Never use excessive force to insert a card. This can result in damage to the pins in the rear of the slot. • The card may not contain files that are recognized by the new core. Navi data can only be transferred between cores with the same Model code, and with the same navi Program flash version. • The flash memory chip type may not be accepted by the system. Only Compact Flash, and ATA cards have been tested. • The card's PCMCIA adaptor may be preventing a known good card from being recognize. Avoid multi slot type PCMCIA adaptors that

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

Why won't the Export or Import functions work? What do I check as part of troubleshooting?	accept several different flash memory types • The card may be full and as a result the files are stored, but without any data. Export and import appear to function, but move nothing. Delete unused files from the card. • There may not be any files on the card. If the card has a write protection switch, make sure it is turned off before attempting to use the Export function. • Although flash memory chips are reliable, occasionally they develop bad sectors or other formatting errors that prevents them from accepting files. The card should be reformatted using the FAT format. • The card may have been formatted using the format NTFS. Only the FAT format is accepted by the system. • Hard Disc Drive (HDD) cards may not work properly in the system and can overheat or quit functioning, particularly in a hot vehicle. They are not recommended. • Before doing the import function, ensure that the client's original DVD is loaded into the new core and working properly.
Are there any error messages to tell me what is wrong?	There are no error messages associated with the Import/Export feature. Follow the troubleshooting steps above.

Error Message Table

ERROR MESSAGE CHART

Screen Error Message	Solution
Navigation system is unable to acquire a proper GPS signal.	Make sure there is nothing on the dashboard blocking the GPS antenna. If not, move the vehicle to an open space away from tall buildings, trees, etc. Window tinting and after-market devices can affect the GPS reception.
Navigation unit door is open or No DVD disc installed. Please check system.	Make sure the navigation DVD is the correct color and is not scratched or damaged. Make sure it is installed with the label side up and the navigation unit door is snapped fully closed.
No DVD disc, please check system.	Check that the navigation DVD is installed with the label side up.
Display temp is too high. System will shut down until display cools down.	This message will appear briefly when the display temperature is too high, and then the display will turn off until the temperature cools down. The system will turn back on when the display cools down.
Outside temperature is low, system will take a while to start up.	The temperature is below -30°C and the navigation unit has difficulties reading the DVD. The system will start up when the temperature warms up.
DVD disc reading error (unformatted), please consult your dealer.	Check the DVD for the correct color and software version. Also check for deep scratches or other damage. Make sure you are using an official Honda navigation DVD (white in color). The system cannot read other mapping databases or video DVDs. If the problem persists, see your dealer. Check any

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Navigation System - MDX

	official Honda service website for more service information about the navigation system.
Route has not been completed. Please try again from a different location.	Routing to or from a place (new area) that is not in the database. Try planning a different route to or from a different location that is clearly displayed on the map (map matched).
No alternate route found. Original route will be guided.	No alternate route method was found. The original route method will be used.
This destination cannot be found in database.	The destination was not found in the database. Try another destination nearby, or select the destination with the joystick.

VOICE CONTROL SWITCH TEST

1. Remove the driver's airbag assembly (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Remove the 20P connector from the cable reel.

Fig. 101: Identifying Voice Control Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the resistance between the No. 8 and No. 10 terminals in each switch position according to the table.

RESISTANCE CHART

Position	Resistance
No buttons pressed	About 10 kohms
Talk button pressed	About 2.2 kohms
Back button pressed	About 640 ohms

4. If the resistance is not as specified, replace the voice control switch (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**).
5. Use a diode tester between the terminals in each switch position according to the table.

Terminal	18		17
	○	⊕	○

Fig. 102: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the diode test is not as specified, replace the voice control switch (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**).

FORCED STARTING OF DISPLAY

Special tools required

SCS Service Connector 07PAZ-0010100

1. Turn the ignition switch to LOCK (0).
2. Connect the SCS service connector (A) to the navigation service connector (B) located behind the navigation unit.

Fig. 103: Identifying SCS Service Connector And Navigation Service Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Check that the diagnosis menu for the picture diagnosis starts up, and then changes to the system link

menu.

NOTE: If the display fails to display the system link screen, refer to **NO PICTURE IS DISPLAYED** (see).

DVD-ROM REPLACEMENT

NOTE: Check any official Honda service website for more service information about the navigation system.

1. Turn the ignition switch to ON (II).
2. Push the open button (A) of the navigation unit located under the driver's seat.

Fig. 104: Removing DVD-ROM

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Press the EJECT button (B).
4. Remove the DVD-ROM.
5. Insert the new DVD-ROM with the white label facing up.
6. Close the front cover. Do not turn the ignition switch to LOCK (0); watch the navigation screen until the data is downloaded to the navigation unit.
7. Do the Map Matching (see **MAP MATCHING**).

NOTE: After servicing, the front cover and PC card slot door must be closed. If you start up the navigation system with the front cover or PC card slot door open, the display will indicate an error message.

NAVIGATION UNIT REMOVAL/INSTALLATION

- NOTE:**
- Before you replace the navigation unit, back-up the client data using system diagnostic mode save users memory under the functional set up (see **SAVE USERS MEMORY**).

- If the navigation unit is replaced or disconnected, a Map Matching must be done (see MAP MATCHING).

1. Turn the ignition switch to ON (II).
2. Eject the DVD from the original navigation unit (see DVD-ROM Replacement). To avoid scratching or damaging the DVD, temporarily place the DVD in a jewel case.

NOTE: If the DVD will not eject, refer to symptom troubleshooting Navigation unit will not eject or accept the navigation DVD (see NAVIGATION UNIT WILL NOT EJECT OR ACCEPT THE NAVIGATION DVD).

3. Turn the ignition switch to LOCK (0).
4. Remove the Driver's seat (see FRONT SEAT ACTIVE HEAD RESTRAINT INSPECTION).
5. Remove the two mounting nuts (A) from the navigation unit (B).

Fig. 105: Identifying Mounting Nuts, Navigation Unit, Cover And Navigation Unit Connectors
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the cover (C), then disconnect the navigation unit connectors (D).
7. Remove the bolts, and the brackets (A).

Fig. 106: Identifying Brackets

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the unit in the reverse order of removal.
9. Install in the reverse order of removal.
10. Turn the ignition switch to ON (II), then reinstall the client's original DVD, verifying that the DVD is free of scratches or smudges.
11. Check any official Honda service website for more service information about patches for the navigation system. Apply any prescribed patches to the new navigation unit.

NOTE: Simply transferring the DVD from the original navigation unit to the new navigation unit does not assure the correct software for the vehicle will be loaded into the new navigation unit. Doing the DVD transfer without doing software patches may cause the new navigation unit to appear to be malfunctioning.

12. Enter the new navigation anti-theft code.
13. Park the vehicle outside, and do the GPS initialization (see **GPS INITIALIZATION**).
14. Give the new navigation anti-theft code to the client.

GPS ANTENNA REMOVAL/INSTALLATION

1. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).
2. Remove the display unit (see **DISPLAY UNIT REMOVAL/INSTALLATION**).
3. Disconnect the GPS antenna connector (A), and remove the bolt (B).

Fig. 107: Identifying GPS Antenna And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the GPS antenna (C).
5. Install the antenna in the reverse order of removal.

DISPLAY UNIT REMOVAL/INSTALLATION

1. Remove the dashboard upper visor (see [SPEAKER TEST/REPLACEMENT](#)).
2. Remove the two screws (A) and bolt (B), then remove the display unit (C).

Fig. 108: Identifying Display Unit, Screws And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the navigation display connector (D).
4. Install the unit in the reverse order of removal. Be careful not to drop the forward bolt behind the dashboard.

INTERFACE DIAL REMOVAL/INSTALLATION

1. Remove the audio unit (see [AUDIO UNIT REMOVAL/INSTALLATION](#)).
2. Remove the harness cover (A).

Fig. 109: Identifying Harness Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the interface dial connector (A), then remove the interface dial (B).

NOTE: If the hard buttons do not work, but the jog dial does, recheck the interface dial connector (A) connection.

Fig. 110: Identifying Interface Dial Connector And Interface Dial
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the dial in reverse order of removal.

REARVIEW CAMERA REMOVAL/INSTALLATION

1. Remove the rear license trim (see **REAR LICENSE TRIM REPLACEMENT**) and tailgate lower trim panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. Disconnect the connector (A), then remove the screws and the rearview camera (B).

Fig. 111: Identifying Rearview Camera And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install in the reverse order of removal.

2007-09 ACCESSORIES AND EQUIPMENT

Openers - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Openers Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOOD OPENER CABLE REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body and its related parts.

1. Remove these items:

- Front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**)
- Front inner fender, left side as needed (see **FRONT INNER FENDER REPLACEMENT**)
- Driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
- Kick panel, driver's side (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**)

2. Disconnect the hood opener cable (A) from the hood latch (B) (see **HOOD LATCH**

REPLACEMENT).**Fastener Locations**

▷ : Clip, 6

Fig. 2: Identifying Hood Release Handle, Grommet And Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the hood release handle (C) (see **HOOD RELEASE HANDLE REPLACEMENT**), and disconnect the hood opener cable.
4. Using a clip remover, detach the clips, and remove the grommet (D) from the body, then remove the hood opener cable from the vehicle. Take care not to kink the cable.
5. Install the cable in the reverse order of removal.

NOTE: If the clips are damaged or stress-whitened, replace them with new ones.

HOOD LATCH REPLACEMENT

1. Remove the front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. Disconnect the hood latch switch connector (A), then remove the connector clip from the body.

Fig. 3: Identifying Hood Latch Switch Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts, then remove the hood latch (A) from the body.

Fig. 4: Identifying Hood Latch And Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the hood opener cable (B) from the hood latch. Take care not to kink the cable.
5. Install the latch in the reverse order of removal, and note these items:
 - Apply multipurpose grease to the hood latch as indicated by the arrows.
 - Make sure the hood opener cable is connected properly and the hood latch switch connector is plugged in properly.
 - Make sure the cable actuates the latch before you close the hood.
 - Adjust the hood latch alignment (see step 4 on **HOOD ADJUSTMENT**).
 - Make sure the hood opens properly and locks securely.

Fig. 5: Identifying Hood Latch Grease Area

Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOOD RELEASE HANDLE REPLACEMENT

1. Remove the driver's kick panel (see [TRIM REMOVAL/INSTALLATION - DOOR AREAS](#)).
2. Remove the bolts, then remove the hood release handle (A).

Fastener Locations

► : Bolt, 2

Fig. 6: Identifying Hood Release Handle And Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the hood opener cable (B) from the hood release handle. Take care not to kink the cable.
4. Install the hood release handle in the reverse order of removal, and note these items:
 - Make sure the hood opener cable is connected properly.
 - Make sure the hood opens properly.

FUEL FILL DOOR LATCH REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the rear bumper.

1. Remove these items:
 - Left rear side trim panel (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA)
 - Left rear fender cover (see REAR FENDER COVER REPLACEMENT)
2. From inside the vehicle, disconnect the actuator rod (A) from the fuel fill door latch (B).

Fig. 7: Identifying Actuator Rod And Fuel Fill Door Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the fuel door latch (A).
 1. Turn the latch 45° counterclockwise.
 2. First pull out the end of the latch from the grommet (B).
 3. Remove the latch from the fuel fill door adapter (C).

Fig. 8: Identifying Fuel Door Latch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If necessary, remove the grommet (A) by releasing the tabs (B) from inside the vehicle.

Fig. 9: Identifying Grommet And Tabs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the fuel door latch in the reverse order of removal, and note these items:
 - Install the grommet with the arrow mark on the grommet pointing up.
 - Make sure the fuel fill door opens properly and locks securely.

FUEL FILL DOOR ACTUATOR REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the rear bumper.

1. Remove the left rear side trim panel (see **TRIM REMOVAL/INSTALLATION - REAR SIDE AREA**).
2. Disconnect the actuator rod (A) and the actuator connector (B).

Fig. 10: Identifying Actuator Rod And Actuator Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosen the bolts, then remove the actuator (A) and the bracket (B) together by sliding it upward.

Fastener Locations

► : Bolt, 2

6 x 1.0 mm
 9.8 N·m
 (1.0 kgf·m, 7.2 lbf·ft)

Fig. 11: Identifying Actuator, Bracket And Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the fuel door actuator in the reverse order of removal, and note these items:
 - Make sure the actuator connector is plugged in properly, and the rod is connected securely.
 - Make sure the fuel fill door opens properly and locks securely.

TAILGATE LATCH REPLACEMENT

WITHOUT POWER TAILGATE

- Put on gloves to protect your hands.
- If the tailgate latch can't be unlocked by using the keyless entry transmitter or the inside/outside tailgate switches, or by unlocking the driver's door lock, remove the maintenance lid (A) from the tailgate lower trim panel, then turn the emergency lever (B) clockwise as shown.

Fig. 12: Identifying Maintenance Lid And Emergency Lever
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the tailgate lower trim panel (see TRIM REMOVAL/INSTALLATION - TAILGATE AREA).
2. Disconnect the tailgate latch switch connector (A) and tailgate actuator connector (B).

Fastener Locations

► : Bolt, 2

Fig. 13: Identifying Tailgate Latch Switch Connector And Tailgate Actuator Connector With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts.
4. Pull the tailgate latch (A) out, then remove it.

Fig. 14: Identifying Tailgate Latch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the latch in the reverse order of removal, and note these items:
 - Make sure the connectors are plugged in properly.
 - Make sure the tailgate opens properly and looks securely. .

WITH POWER TAILGATE

- Put on gloves to protect your hands.
- If the tailgate latch can't be unlocked by using the keyless entry transmitter or the inside/outside tailgate switches, remove the maintenance lid (A) from the tailgate lower trim panel, then turn the emergency lever (B) clockwise as shown.

Fig. 15: Identifying Maintenance Lid And Emergency Lever
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Do the battery terminal disconnection procedure (See **DISCONNECTION**)

NOTE: If you remove the tailgate latch while the negative battery cable is still connected, the vehicle goes into the failsafe mode.

2. Remove the tailgate lower trim panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
3. Disconnect the tailgate latch connector (A) and actuator connector (B).

Fastener Locations

C ▶ : Bolt, 2 D ▶ : Bolt, 1

6 x 1.0 mm
 9.8 N·m (1.0 kgf-m, 7.2 lbf-ft)

Fig. 16: Identifying Tailgate Latch Connector And Actuator Connector With Torque Specification

DTC TROUBLESHOOTING

DTC P2279: INTAKE AIR SYSTEM LEAK

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If DTC P0443 is stored at the same time as DTC P2279, troubleshoot DTC P0443 first, then recheck for DTC P2279.

1. Check for vacuum leaks at these parts:

- PCV valve
- PCV hose
- Purge (PCS) line
- Throttle body

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PCV System - MDX

- Intake manifold
- Brake booster hose

Are the parts OK?

YES - Go to step 2.

NO - Repair or replace any damaged parts, then go to step 4.

2. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 1 minute.
3. Monitor the OBD STATUS for DTC P2279 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Check the camshaft timing (see **TIMING BELT INSTALLATION**), then go to step 4.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates NOT COMPLETED, go to step 2 and recheck.

4. Reset the PCM with the HDS.
5. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
6. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 1 minute.
7. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2279 indicated?

YES - Check for vacuum leaks at the PCV valve, the PCV hose, the purge (PCS) line, the throttle body, the intake manifold, and the brake booster hose, then go to step 1.

NO - Go to step 8.

8. Monitor the OBD STATUS for DTC P2279 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 7, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

PCV VALVE INSPECTION

1. Remove the engine cover (see step 1 on **REMOVAL**).
2. Check the PCV valve (A), hoses (B), and connections for leaks or restrictions.

Fig. 2: Identifying PCV Valve And Hoses

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At idle, listen to the PCV valve (A) with a stethoscope as you lightly pinch the PCV hose (B) with your fingers or pliers several times. Each time the hose is pinched, the valve should click.

If there is no clicking sound, check the PCV valve grommet (C) for cracks or damage. If the grommet is OK, replace the PCV valve (see **PCV VALVE INSPECTION**) and recheck.

Fig. 3: Pinching PCV Hose With Pliers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCV VALVE REPLACEMENT

1. Remove the engine cover (see step 1 on **REMOVAL**).

2. Remove the bolt (A).

NOTE: Take care not to spill oil on the hot exhaust manifold.

Fig. 4: Identifying PCV Valve And Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the PCV valve (B).
4. Install the parts in the reverse order of removal.

NOTE:

- When installing a new PCV valve, make sure the O-rings (C) are in place.
- When installing a used PCV valve, use new O-rings (C).

2007-09 ENGINE PERFORMANCE

PGM-FI System - MDX

DTC TROUBLESHOOTING

DTC P0101: MAF SENSOR RANGE/PERFORMANCE PROBLEM**NOTE:**

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If DTC P1128, P1129, P2228, and/or P2229 are stored at the same time as DTC P0101, troubleshoot those DTCs first, then recheck for DTC P0101.

1. Check for poor connections or damage to these parts:

- PCV valve
- PCV hose
- EVAP canister purge valve
- Throttle body
- Intake manifold
- Brake booster
- Brake booster hose
- Air intake duct

Are the parts OK?

YES - Go to step 2.

NO - Repair or replace the damaged parts, then go to step 15.

2. Check for damage or looseness at the air duct in the air cleaner.

Is it OK?

YES - Go to step 3.

NO - Reconnect or replace the air duct in the air cleaner, then go to step 15.

3. Check for a dirty air cleaner element.

Is it dirty?

YES - Replace the air cleaner element (see AIR CLEANER ELEMENT INSPECTION/REPLACEMENT), then go to step 15.

NO - Go to step 4.

4. Turn the ignition switch OFF.

5. Turn the ignition switch ON (II).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

6. Check the MAF SENSOR in the DATA LIST with the HDS.

Is there about 0.2 gm/s or 0.5 V?

YES - Go to step 7.

NO - Go to step 13.

7. Start the engine.
8. Vary the engine speed between 2,000 rpm and 3,000 rpm.
9. Check the MAF SENSOR in the DATA LIST with the HDS.

Does the reading change?

YES - Go to step 10.

NO - Go to step 13.

10. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
11. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - MAP SENSOR
 - MAF SENSOR
12. Monitor the OBD STATUS for DTC P0101 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 13.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the screen indicates NOT COMPLETED, go to step [11](#) and recheck.

13. Turn the ignition switch OFF.
14. Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

- MAP SENSOR
- MAF SENSOR

19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0101 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM, then go to step 1.

NO - Go to step 20.

20. Monitor the OBD STATUS for DTC P0101 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 19, go to the indicated DTCs troubleshooting.

NO -If the screen indicates FAILED, check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 18.

DTC P0102: MAF SENSOR CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

Is about 0 gm/s, or 0.1 V or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/I AT sensor and the PCM.

3. Check the No. 18 ACG (10 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?

YES - Go to step 4.

NO - Repair short in the wire between the MAF sensor and the No. 18 ACG (10 A) fuse. Also replace the No. 18 ACG (10 A) fuse, then go to step 20.

4. Turn the ignition switch OFF.
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Turn the ignition switch ON (II).
7. Measure voltage between MAF sensor/IAT sensor 5P connector terminal No. 5 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 4: Identifying Voltage Between MAF Sensor 5P Connector Terminal 5 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 8.

NO - Repair open in the wire between the No. 18 ACG (10 A) fuse and the MAF sensor, then go to step 20.

8. Turn the ignition switch OFF.
9. Measure resistance between MAF sensor/IAT sensor 5P connector terminal No. 3 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 5: Identifying Resistance Between MAF Sensor 5P Connector Terminal 3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 190-210 kohms?

YES - Go to step 14.

NO - Go to step 10.

10. Jump the SCS line with the HDS.
11. Disconnect PCM connector A (49P).
12. Check for continuity between PCM connector terminal A20 and body ground.

Fig. 6: Identifying Continuity Between PCM Connector Terminal A20 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A20) and the MAF sensor, then go to step 21.

NO - Go to step 13.

13. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 3 and PCM connector terminal A20.

Fig. 7: Identifying Continuity Between MAF Sensor 5P Connector Terminal 3 And PCM Connector Terminal (A20)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Is there continuity?

YES - Go to step 26.

NO - Repair open in the wire between the PCM (A20) and the MAF sensor, then go to step 21.

14. Substitute a known-good MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
15. Reconnect all connectors.
16. Turn the ignition switch ON (II).
17. Clear the DTC with the HDS.
18. Start the engine. Hold the engine speed at 2,000 rpm without load (in Park or neutral).
19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?

YES - Go to step 26.

NO - Replace the original MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**), then go to step 20.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Turn the ignition switch ON (II).
23. Reset the PCM with the HDS.
24. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

26. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0102 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If

the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0103: MAF SENSOR CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II), and wait 2 seconds.
2. Check the MAF SENSOR in the DATA LIST with the HDS.

Is about 202 gm/s, or 4.89 V or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM.

3. Turn the ignition switch OFF.
4. Jump the SCS line with the HDS.
5. Disconnect the MAF sensor/IAT sensor 5P connector.
6. Disconnect PCM connector A (49P).
7. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 4 and PCM connector terminal A9.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Fig. 8: Identifying Continuity Between MAF Sensor 5P Connector Terminal 4 And PCM Connector Terminal A9

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 8.

NO - Repair open in the wire between the PCM (A9) and the MAF sensor, then go to step 15.

8. Reconnect PCM connector A (49P).
9. Connect MAF sensor/IAT sensor 5P connector terminals No. 3 and No. 4 with a jumper wire.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 9: Identifying MAF Sensor/IAT Sensor 5P Connector Terminals 3 And 4 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Turn the ignition switch ON (II).
11. Clear the DTC with the HDS.
12. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0103 indicated?

YES - Go to step 20.

NO - Go to step 13.

13. Turn the ignition switch OFF.
14. Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
15. Reconnect all connectors.
16. Turn the ignition switch ON (II).
17. Reset the PCM with the HDS.
18. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0103 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM, then go to step 1.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0103 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0107: MAP SENSOR CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

Is about 3 kPa (1.0 in.Hg, 26 mmHg), or 0.23 V or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the MAP sensor 3P connector.
5. Turn the ignition switch ON (II).
6. Check the MAP SENSOR in the DATA LIST with the HDS.

Is about 3 kPa (1.0 in.Hg, 26 mmHg), or 0.23 V or less indicated?

YES - Go to step 12.

NO - Go to step 7.

7. Measure voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

Fig. 10: Identifying Voltage Between MAP Sensor 3P Connector Terminals 1 And 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 16.

NO - Go to step 8.

8. Turn the ignition switch OFF.
9. Jump the SCS line with the HDS.
10. Disconnect PCM connector B (49P).
11. Check for continuity between PCM connector terminal B36 and MAP sensor 3P connector terminal No. 1.

Fig. 11: Identifying Continuity Between PCM Connector Terminal B36 And MAP Sensor 3P Connector Terminal 1
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 23.

NO - Repair open in the wire between the PCM (B36) and the MAP sensor, then go to step 18.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector B (49P).
15. Check for continuity between MAP sensor 3P connector terminal No. 2 and body ground.

MAP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 12: Identifying Continuity Between MAP Sensor 3P Connector Terminal 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B35) and the MAP sensor, then go to step 18.

NO - Go to step 23.

16. Turn the ignition switch OFF.
17. Replace the MAP sensor (see **MAP SENSOR REPLACEMENT**).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0107 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

23. Reconnect all connectors.

24. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0107 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0108: MAP SENSOR CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check the MAP SENSOR in the DATA LIST with the HDS.

Is about 160 kPa (47.1 in.Hg, 1,197 mmHg), or 4.49 V or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the MAP sensor 3P connector.
5. Connect MAP sensor 3P connector terminals No. 2 and No. 3 with a jumper wire.

MAP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 13: Identifying MAP Sensor 3P Connector Terminals 2 And 3 With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the ignition switch ON (II).
7. Check the MAP SENSOR in the DATA LIST with the HDS.

Is about 160 kPa (47.1 in.Hg, 1,197 mmHg), or 4.49 V or more indicated?

YES - Go to step 8.

NO - Go to step 18.

8. Remove the jumper wire from the MAP sensor 3P connector.
9. Measure voltage between MAP sensor 3P connector terminals No. 1 and No. 3.

MAP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 14: Identifying Voltage Between MAP Sensor 3P Connector Terminals 1 And 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 14.

NO - Go to step 10.

10. Turn the ignition switch OFF.
11. Jump the SCS line with the HDS.
12. Disconnect PCM connector B (49P).
13. Check for continuity between PCM connector terminal B34 and MAP sensor 3P connector terminal No. 3.

Fig. 15: Identifying Continuity Between PCM Connector Terminal B34 And MAP Sensor 3P Connector Terminal 3

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 25.

NO - Repair open in the wire between the PCM (B34) and the MAP sensor, then go to step 20.

14. Turn the ignition switch OFF.
15. Jump the SCS line with the HDS.
16. Disconnect PCM connector B (49P).
17. Check for continuity between PCM connector terminal B35 and MAP sensor 3P connector terminal No. 2.

Fig. 16: Identifying Continuity Between PCM Connector Terminal B35 And MAP Sensor 3P Connector Terminal 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 25.

NO - Repair open in the wire between the PCM (B35) and the MAP sensor, then go to step 20.

18. Turn the ignition switch OFF.
19. Replace the MAP sensor (see **MAP SENSOR REPLACEMENT**).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the PCM with the HDS.
23. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0108 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

25. Reconnect all connectors.
26. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0108 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0111: IAT SENSOR CIRCUIT RANGE/ PERFORMANCE PROBLEM

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Check for poor connections or loose terminals at ECT sensor 1/2 and the MAF sensor/IAT sensor.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Are the connections and terminals OK?

YES - Go to step 2.

NO - Repair the connections or terminals, then go to step 15.

2. Remove the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
3. Allow the IAT sensor to cool to ambient temperature.
4. Note the ambient temperature.
5. Connect the MAF sensor/IAT sensor to its 5P connector, but do not install the sensor onto the air cleaner.
6. Turn the ignition switch ON (II).
7. Note the value of the IAT SENSOR quickly in the DATA LIST with the HDS.
8. Compare the value of the IAT SENSOR to the ambient temperature.

Does the value of the IAT SENSOR differ 5.4°F (3°C) or more?

YES - Go to step 13.

NO - Go to step 9.

9. Disconnect the MAF sensor/IAT sensor from the 5P connector.
10. Using a heat gun, blow hot air on the MAF sensor/ IAT sensor for a few seconds. Do not apply the heat longer than a few seconds or you will damage the sensor.
11. Connect the MAF sensor/IAT sensor to its 5P connector, but do not install the sensor onto the air cleaner.
12. Check the IAT SENSOR in the DATA LIST with the HDS.

Does the IAT SENSOR change 58°F (32°C) or more?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IAT sensor and the PCM.

NO - Go to step 13.

13. Turn the ignition switch OFF.
14. Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0111 indicated?

YES - Check for poor connections or loose terminals at the IAT sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0112: IAT SENSOR CIRCUIT LOW VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

Is about 356°F (180°C) or more, or 0.08 V or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Turn the ignition switch ON (II).
6. Check the IAT SENSOR in the DATA LIST with the HDS.

Is about 356°F (180°C) or more, or 0.08 V or less indicated?

YES - Go to step 7.

NO - Go to step 11.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector C (49P).
10. Check for continuity between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 17: Identifying Continuity Between MAF Sensor 5P Connector Terminal 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the IAT sensor and the PCM (C24), then go to step 13.

NO - Go to step 18.

11. Turn the ignition switch OFF.
12. Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0112 indicated?

YES - Check for poor connections or loose terminals at the IAT sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

18. Reconnect all connectors.
19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0112 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0113: IAT SENSOR CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check the IAT SENSOR in the DATA LIST with the HDS.

Is about -40°F (-40°C) or less, or 4.92 V or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the MAF sensor/IAT sensor 5P connector.
5. Connect MAF sensor/IAT sensor 5P connector terminals No. 1 and No. 2 with a jumper wire.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 18: Identifying MAF Sensor/IAT Sensor 5P Connector Terminals 1 And 2 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the ignition switch ON (II).
7. Check the IAT SENSOR in the DATA LIST with the HDS.

Is about -40°F (-40°C) or less, or 4.92 V or more indicated?

YES - Go to step 8.

NO - Go to step 20.

8. Turn the ignition switch OFF.
9. Remove the jumper wire from the MAF sensor/IAT sensor 5P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between MAF sensor/IAT sensor 5P connector terminal No. 2 and body ground.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 19: Identifying Voltage Between MAF Sensor 5P Connector Terminal 2 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 12.

NO - Go to step 16.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector C (49P).
15. Check for continuity between PCM connector terminal C16 and MAF sensor/IAT sensor 5P connector terminal No. 1.

MAF SENSOR/IAT SENSOR 5P CONNECTOR

Fig. 20: Identifying Continuity Between PCM Connector Terminal C16 And MAF Sensor Connector Terminal 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (C16) and the MAF sensor/IAT sensor, then go to step 22.

16. Turn the ignition switch OFF.
17. Jump the SCS line with the HDS.
18. Disconnect PCM connector C (49P).
19. Check for continuity between PCM connector terminal C24 and MAF sensor/IAT sensor 5P connector terminal No. 2.

Fig. 21: Identifying Continuity Between PCM Connector Terminal C24 And MAF Sensor Connector Terminal 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (C24) and the MAF sensor/IAT sensor, then go to step 22.

20. Turn the ignition switch OFF.
21. Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**).
22. Reconnect all connectors.
23. Turn the ignition switch ON (II).
24. Reset the PCM with the HDS.
25. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).

26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0113 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0113 indicated?

YES - Check for poor connections or loose terminals at the MAF sensor/IAT sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0116: ECT SENSOR 1 RANGE/ PERFORMANCE PROBLEM

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 176°F (80°C) or more, or 0.78 V or less indicated?

YES - Go to step 6.

NO - Go to step 3.

3. Note the value of ECT SENSOR 1 in the DATA LIST with the HDS.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Check ECT SENSOR 1 in the DATA LIST with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Does ECT SENSOR 1 change 18°F (10°C) or more?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

NO - Go to step 11.

6. Note the value of ECT SENSOR 1 in the DATA LIST with the HDS.
7. Turn the ignition switch OFF.
8. Open the hood, and let the engine cool for 3 hours.
9. Turn the ignition switch ON (II).
10. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Does ECT SENSOR 1 change 18°F (10°C) or more?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

NO - Go to step 11.

11. Turn the ignition switch OFF.
12. Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**).
13. Turn the ignition switch ON (II).
14. Reset the PCM with the HDS.
15. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0116 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to .

DTC P0117: ECT SENSOR 1 CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 356°F (180°C) or more, or 0.08 V or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the ECT sensor 1 2P connector.
5. Turn the ignition switch ON (II).
6. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 356°F (180°C) or more, or 0.08 V or less indicated?

YES - Go to step 7.

NO - Go to step 11.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector C (49P).
10. Check for continuity between ECT sensor 1 2P connector terminal No. 1 and body ground.

ECT SENSOR 1 2P CONNECTOR

Wire side of female terminals

Fig. 22: Identifying Continuity Between ECT Sensor 1 2P Connector Terminal No 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between ECT sensor 1 and the PCM (C32), then go to step 13.

NO - Go to step 18.

11. Turn the ignition switch OFF.
12. Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**).
13. Reconnect all connectors.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0117 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

18. Reconnect all connectors.
19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0117 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1 and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0118: ECT SENSOR 1 CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about -40°F (-40°C) or less, or 4.92 V or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1 and the PCM.

3. Turn the ignition switch OFF.

4. Disconnect the ECT sensor 1 2P connector.
5. Connect ECT sensor 1 2P connector terminals No. 1 and No. 2 with a jumper wire.

ECT SENSOR 1 2P CONNECTOR

Fig. 23: Identifying ECT Sensor 1 2P Connector Terminals 1 And 2 With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the ignition switch ON (II).
7. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about -40°F (-40°C) or less, or 4.92 V or more indicated?

YES - Go to step 8.

NO - Go to step 20.

8. Turn the ignition switch OFF.
9. Remove the jumper wire.
10. Turn the ignition switch ON (II).
11. Measure voltage between ECT sensor 1 2P connector terminal No. 1 and body ground.

ECT SENSOR 1 2P CONNECTOR

Wire side of female terminals

Fig. 24: Identifying Voltage Between ECT Sensor 1 2P Connector Terminal 1 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 12.

NO - Go to step 16.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector C (49P).
15. Check for continuity between PCM connector terminal C16 and ECT sensor 1 2P connector terminal No. 2.

Fig. 25: Continuity Between PCM Connector Terminal C16 And ECT Sensor Connector Terminal 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (C16) and ECT sensor 1, then go to step 22.

16. Turn the ignition switch OFF.
17. Jump the SCS line with the HDS.
18. Disconnect PCM connector C (49P).
19. Check for continuity between PCM connector terminal C32 and ECT sensor 1 2P connector terminal No. 1.

Fig. 26: Identifying Continuity Between PCM Connector Terminal C32 And ECT Sensor Connector Terminal 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (C32) and ECT sensor 1, then go to step 22.

20. Turn the ignition switch OFF.
21. Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**).
22. Reconnect all connectors.
23. Turn the ignition switch ON (II).
24. Reset the PCM with the HDS.
25. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0118 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0118 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1 and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0125: ECT SENSOR 1 MALFUNCTION/SLOW RESPONSE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Start the engine, and let it idle for 5 minutes or more.
2. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 10°F (-12°C) or less, or 4.45 V or more indicated?

YES - Go to step 9.

NO - Go to step 3.

3. Allow the engine to cool to 104°F (40°C) or less.
4. Note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.
5. Start the engine, and let it idle.
6. Let the engine idle until ECT SENSOR 1 goes up 49°F (27°C) or more from the recorded temperature.
7. Note the value of ECT SENSOR 2 in the DATA LIST with the HDS.
8. Compare ECT SENSOR 2 and the recorded temperature.

Did ECT SENSOR 2 change 17°F (9.5°C) or more?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

NO - Check the thermostat (see **FAN MOTOR TEST**). If the thermostat is OK, go to step 9. If the thermostat is faulty, replace it (see **THERMOSTAT REPLACEMENT**), then go to step 11.

9. Turn the ignition switch OFF.
10. Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**).
11. Turn the ignition switch ON (II).
12. Reset the PCM with the HDS.
13. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
14. Allow the engine to cool to ambient temperature.

15. Start the engine, and let it idle for 20 minutes.
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0125 indicated?

YES - Check for poor connections or loose terminals at the ECT sensor 2 and the PCM, then go to step 1.

NO - Go to step 17.

17. Monitor the OBD STATUS for DTC P0125 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 16, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the ECT sensor 2 and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 14.

DTC P0128: COOLING SYSTEM MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the blower switch OFF.
4. Check the FAN CTRL in the DATA LIST with the HDS.

Is it OFF?

YES - Go to step 5.

NO - Wait until the FAN CTRL is off, then go to step 5.

5. Check the radiator fan operation.

Does the radiator fan keep running?

YES - Check the radiator fan circuit (see **CIRCUIT DIAGRAM**), and the radiator fan relay (see **POWER RELAY TEST**). If the circuits and the relay are OK, go to step 19.

NO - Go to step 6.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

6. Let the engine cool until the coolant temperature is 104°F (40°C) or less.
7. Note the value of ECT SENSOR 1 and ECT SENSOR 2 in the DATA LIST with the HDS.
8. Start the engine, and let it idle.
9. Let the engine idle until ECT SENSOR 1 goes up 49°F (27°C) or more from the recorded temperature.
10. Check ECT SENSOR 2 in the DATA LIST with the HDS.
11. Compare the value of recorded ECT SENSOR 2 and the present value of ECT SENSOR 2.

Did the temperature rise 17°F (9.5°C) or more?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

NO - Test the thermostat (see **FAN MOTOR TEST**), then go to step 12.

12. Turn the ignition switch ON (II).
13. Reset the PCM with the HDS.
14. Let the engine cool until the coolant temperature is between 21°F (-6°C) and 104°F (40°C).
15. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
16. Test-drive at a steady speed between 15-75 mph (24-120 km/h) for 10 minutes.
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0128 indicated?

YES - Check the cooling system, then go to step 1.

NO - Go to step 18.

18. Monitor the OBD STATUS for DTC P0128 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 17, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check the cooling system, then go to step 1. If the screen indicates NOT COMPLETED, go to step 14.

19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Let the engine cool until the coolant temperature is between 21°F (-6°C) and 104°F (40°C).
21. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
22. Test-drive at a steady speed between 15-75 mph (24-120 km/h) for 10 minutes.

23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0128 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 20. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P0128 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 20. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 20.

DTC P0133: REAR A/F SENSOR (BANK 1, SENSOR 1) RESPONSE MALFUNCTION/SLOW RESPONSE; DTC P0153: FRONT A/F SENSOR (BANK 2, SENSOR 1) RESPONSE MALFUNCTION/SLOW RESPONSE

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- If DTC P0139 and/or P0159* is stored at the same time as DTC P0133 and/or P0153*, troubleshoot DTC P0139 and/or P0159* first, then recheck for DTC P0133 and/ or P0153*.
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Drive the vehicle at 25 mph (40 km/h) or less for 5 minutes, then drive at a steady speed between 26-81 mph (41-130 km/h)

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

5. Monitor the OBD STATUS for DTC P0133 and/or P0153* in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 6.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.

6. Turn the ignition switch OFF.
7. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
8. Turn the ignition switch ON (II).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Drive the vehicle at 25 mph (40 km/h) or less for 5 minutes, then drive at a steady speed between 26-81 mph (41-130 km/h)
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0133 and/or P0153 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 14.

14. Monitor the OBD STATUS for DTC P0133 and/or P0153* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 13, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 12.

DTC P0134: REAR A/F SENSOR (BANK 1, SENSOR 1) HEATER SYSTEM MALFUNCTION; DTC

P0154: FRONT A/F SENSOR (BANK 2, SENSOR 1) HEATER SYSTEM MALFUNCTION**NOTE:**

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If DTC P2251 and/or P2254* is stored at the same time as DTC P0134 and/or P0154*, troubleshoot DTC P2251 and/or P2254* first, then recheck for P0134 and/or P0154*.
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle 1 minute.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0134 and/or P0154 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/ relay box (PGM-FI subrelay) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between A/F sensor (Sensor 1) 6P connector terminal No. 4 and PCM connector terminal B13 (B14)*.

Fig. 27: Identifying Continuity Between A/F Sensor Connector Terminal 4 And PCM Connector

Terminal B13

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the PCM (B13 (B14)*) and the A/F sensor (Sensor 1), then go to step 14.

10. Reconnect PCM connector B (49P).
11. Start the engine, then let it idle for 1 minute.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 4 and body ground.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Wire side of female terminals

Fig. 28: Identifying Voltage Between A/F Sensor 6P Connector Terminal 4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.2 V or less?

YES - Go to step 20.

NO - Go to step 13.

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0134 and/or P0154 Indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P0134 and/or P0154* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Start the engine, then let it idle 1 minute.
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0134 and/or P0154 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 23. If the PCM was substituted, go to step 1.

NO - Go to step 25.

25. Monitor the OBD STATUS for DTC P0134 and/or P0154* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 24, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 23. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P0135: REAR A/F SENSOR (BANK 1, SENSOR 1) HEATER CIRCUIT MALFUNCTION; DTC P0155: FRONT A/F SENSOR (BANK 2, SENSOR 1) HEATER CIRCUIT MALFUNCTION

NOTE:

- Before you troubleshoot, record all freeze data and any on-board

snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 and/or P0155 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/ relay box (PGM-FI subrelay), and the PCM.

5. Turn the ignition switch OFF.
6. Check these fuses:
 - No. 11 A/F sensor (AFHT+) (15 A) fuse in the under-hood fuse/relay box
 - No. 3 R/B 1 (30 A) fuse in the main under-hood fuse box.
 - No. 7 +B FAN TIMER (7.5 A) fuse in the under-hood fuse/relay box

Are any of the above fuses blown?

YES - Repair short in the wire between the A/F sensors, the under-hood fuse/relay box (PGM-FI subrelay), then replace the blown fuse(s), and go to step 23.

NO - Go to step 7.

7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. At the sensor side, measure resistance between A/F sensor (Sensor T) 6P connector terminals No. 1 and No. 2.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Terminal side of male terminals

Fig. 29: Identifying Resistance Between A/F Sensor 6P Connector Terminals 1 And 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.5-3.2 ohms at room temperature?

YES - Go to step 9.

NO - Go to step 21.

9. At the sensor side, check for continuity between each terminal at the A/F sensor (Sensor 1) 6P connector and body ground.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Fig. 30: Identifying Continuity Between Terminal A/F Sensor 6P Connector And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Go to step 10.

10. At the sensor side, check for continuity between A/F sensor (Sensor 1) 6P connector terminals No. 1 and No. 4, No. 1 and No. 5, No. 1 and No. 6 individually.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Fig. 31: Identifying Continuity Between A/F Sensor 6P Connector Terminals 1 And 4
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Go to step 11.

11. Jump the SCS line with the HDS.
12. Disconnect PCM connector C (49P).
13. Check for continuity between PCM connector terminal C6 (C8)* and body ground.

Fig. 32: Identifying Continuity Between PCM Connector Terminal C6 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C6 (C8)*) and the A/F sensor (Sensor 1), then go to step 22.

NO - Go to step 14.

14. Check for continuity between A/F sensor (Sensor 1) 6P connector terminal No. 2 and PCM connector terminal C6 (C8)*.

Fig. 33: Identifying Continuity Between A/F Sensor Connector Terminal 2 And PCM Connector Terminal C6

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair open in the wire between the PCM (C6 (C8)*) and the A/F sensor (Sensor 1), then go to step 22.

15. Disconnect the under-hood fuse/relay box 9P connector.
16. Check for continuity between A/F sensor (Sensor 1) 6P connector terminal No. 1 and under-hood fuse/relay box 9P connector No. 9.

Fig. 34: Identifying Continuity Between A/F Sensor Connector Terminal 1 And Under-Hood Fuse Connector 9

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 17.

NO - Repair open in the wire between the A/F sensor (Sensor 1) and the under-hood fuse/relay box, then go to step 22.

17. Disconnect PCM connector A (49P).
18. Disconnect the under-hood fuse/relay box 14P connector.
19. Check for continuity between under-hood fuse/ relay box 14P connector terminal No. 13 and PCM connector terminal A40.

Fig. 35: Identifying Continuity Between Under-Hood Fuse Connector Terminal 13 And PCM Connector Terminal A40

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Repair open in the wire between the PCM (A40) and the under-hood fuse/relay box, then go to step 22.

20. Test the PGM-FI subrelay in the under-hood fuse/ relay box (see **POWER RELAY TEST**).

Is the PGM-FI subrelay OK?

YES - Go to step 28.

NO - Replace the relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**), then go to step 22.

21. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
22. Reconnect all connectors.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

23. Turn the ignition switch ON (II).
24. Reset the PCM with the HDS.
25. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 and/or P0155 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay) and the PCM, then go to step 1.

NO - Go to step 27.

27. Monitor the OBD STATUS for DTC P0135 and/or P0155* in the DTCs MENU with the HDS.

Does the screen Indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 26, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

28. Reconnect all connectors.
29. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0135 and/or P0155 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 31.

31. Monitor the OBD STATUS for DTC P0135 and/or P0155* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 30, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor

(Sensor 1), the under-hood fuse/relay box (PGM-FI subrelay) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P0137: REAR SECONDARY HO2S (BANK 1, SENSOR 2) CIRCUIT LOW VOLTAGE; DTC P0157: FRONT SECONDARY HO2S (BANK 2, SENSOR 2) CIRCUIT LOW VOLTAGE

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
4. Check the HO2S S2 in the DATA LIST with the HDS.

Does the voltage stay at 0.05 V or less?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM.

5. Turn the ignition switch OFF.
6. Disconnect the secondary HO2S (Sensor 2) 4P connector.
7. Turn the ignition switch ON (II).
8. Check the HO2S S2 in the DATA LIST with the HDS.

Does the voltage stay at 0.05 V or less?

YES - Go to step 9.

NO - Go to step 13.

9. Turn the ignition switch OFF.
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector B (49P).
12. Check for continuity between secondary HO2S (Sensor 2) 4P connector terminal No. 1 and body ground.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR

Wire side of female terminals

Fig. 36: Identifying Continuity Between Secondary HO2S Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B25 (B16)*) and the secondary HO2S (Sensor 2), then go to step 15.

NO - Go to step 23.

13. Turn the ignition switch OFF.
14. Replace the secondary HO2S (Sensor 2) (see **SECONDARY HO2S REPLACEMENT**).
15. Reconnect all connectors.
16. Turn the ignition switch ON (II).
17. Reset the PCM with the HDS.
18. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
19. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
20. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Engine speed at 1,500-3,000 rpm
 - Drive 1 minute or more

21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0137 and/or P0157 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1.

NO - Go to step 22.

22. Monitor the OBD STATUS for DTC P0137 and/or P0157* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 21, go to the indicated DTCs troubleshooting.

NO - If the screen indicates **FAILED**, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1. If the screen indicates **EXECUTING**, keep driving until a result comes on. If the screen indicates **OUT OF CONDITION**, go to step 19.

23. Reconnect all connectors.
24. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
25. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
26. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Engine speed at 1,500-3,000 rpm
 - Drive 1 minute or more
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0137 and/or P0157 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 25. If the PCM was substituted, go to step 1.

NO - Go to step 28.

28. Monitor the OBD STATUS for DTC P0137 and/or P0157* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 27, go to the indicated DTCs troubleshooting.

NO - If the screen indicates **FAILED**, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 25. If the PCM was substituted, go to step 1. If the screen indicates **EXECUTING**, keep driving until a result comes on. If the screen indicates **OUT OF CONDITION**, go to step 25.

DTC P0138: REAR SECONDARY HO2S (BANK 1, SENSOR 2) CIRCUIT HIGH VOLTAGE; DTC P0158: FRONT SECONDARY HO2S (BANK 2, SENSOR 2) CIRCUIT HIGH VOLTAGE

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
4. Check the HO2S S2 in the DATA LIST with the HDS.

Does the voltage stay at 1.27 V or more?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM.

5. Turn the ignition switch OFF.
6. Disconnect the secondary HO2S (Sensor 2) 4P connector.
7. Connect secondary HO2S (Sensor 2) 4P connector terminals No. 1 and No. 2 with a jumper wire.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR

Wire side of female terminals

Fig. 37: Identifying Secondary HO2S Connector Terminals 1 And 2 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Turn the ignition switch ON (II).
9. Check the HO2S S2 in the DATA LIST with the HDS.

Does the voltage stay at 1.27 V or more?

YES - Go to step 10.

NO - Go to step 19.

10. Turn the ignition switch OFF.

11. Remove the jumper wire from the secondary HO2S (Sensor 2) 4P connector.
12. Connect secondary HO2S (Sensor 2) 4P connector terminal No. 1 to body ground with a jumper wire.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR

Wire side of female terminals

Fig. 38: Identifying Secondary HO2S Connector Terminal 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Turn the ignition switch ON (II).
14. Check the HO2S S2 in the DATA LIST with the HDS.

Does the voltage stay at 1.27 V or more?

YES - Go to step 15.

NO - Repair open in the wire between the PCM (C16) and the secondary HO2S (Sensor 2), then go to step 21.

15. Turn the ignition switch OFF.
16. Jump the SCS line with the HDS.
17. Disconnect PCM connector B (49P).
18. Check for continuity between PCM connector terminal B25 (B16)* and body ground.

Terminal side of female terminals

Fig. 39: Identifying Continuity Between PCM Connector Terminal B25 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Is there continuity?

YES - Go to step 29.

NO - Repair open in the wire between the PCM (B25 (B16) *) and the secondary HO2S (Sensor 2), then go to step 21.

19. Turn the ignition switch OFF.
20. Replace the secondary HO2S (Sensor 2) (see **SECONDARY HO2S REPLACEMENT**).
21. Reconnect all connectors.
22. Turn the ignition switch ON (II).
23. Reset the PCM with the HDS.
24. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
25. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
26. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Engine speed at 1,500-3,000 rpm
 - Drive 1 minute or more
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0138 and/or P0158 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1.

NO - Go to step 28.

28. Monitor the OBD STATUS for DTC P0138 and/or P0158* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 27, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 25.

29. Reconnect all connectors.
30. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
31. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

32. Test-drive under these conditions:

- Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
- Transmission in D position
- Engine speed at 1,500-3,000 rpm
- Drive 1 minute or more

33. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0138 and/or P0158 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 32. If the PCM was substituted, go to step 1.

NO - Go to step 34.

34. Monitor the OBD STATUS for DTC P0138 and/or P0158* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 33, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 31. If the PCM was substituted, go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 31.

DTC P0139: REAR SECONDARY HO2S (BANK 1, SENSOR 2) SLOW RESPONSE; DTC P0159: FRONT SECONDARY HO2S (BANK 2, SENSOR 2) SLOW RESPONSE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
4. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

- Vehicle speed between 35-55 mph (56-88 km/h)
 - Drive 5 minutes or more
5. Monitor the OBD STATUS for DTC P0139 and/or P0159* in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 6.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.

6. Turn the ignition switch OFF.
7. Replace the secondary HO2S (Sensor 2) (see **SECONDARY HO2S REPLACEMENT**).
8. Turn the ignition switch ON (II).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
11. Start the engine, then let it idle without load (in Park or neutral) until the radiator fan comes on.
12. Test-drive under these conditions:
- Engine coolant temperature above 176°F (80°C)
 - Transmission in D position
 - Vehicle speed between 35-55 mph (56-88 km/h)
 - Drive 5 minutes or more
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0139 and/or P0159 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1.

NO - Go to step 14.

14. Monitor the OBD STATUS for DTC P0139 and/or P0159* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 13, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 11.

**DTC P0141: REAR SECONDARY HO2S (BANK 1, SENSOR 2) HEATER CIRCUIT MALFUNCTION;
DTC P0161: FRONT SECONDARY HO2S (BANK 2, SENSOR 2) HEATER CIRCUIT
MALFUNCTION****NOTE:**

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 and/or P0161 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2), the under-hood fuse/relay box (PGM-FI subrelay) and the PCM.

5. Turn the ignition switch OFF.
6. Check these fuses:
 - No. 11 A/F sensor (AFHT+) (15 A) fuse in the under-hood fuse/relay box
 - No. 3 R/B 1 (30 A) fuse in the main under-hood fuse box.
 - No. 7 +B FAN TIMER (7.5 A) fuse in the under-hood fuse/relay box

Are any of the fuses blown?

YES - Repair short in the wire between the A/F sensors, the under-hood fuse/relay box (PGM-FI subrelay) and the fuse, then go to step 21.

NO - Go to step 7.

7. Disconnect the secondary HO2S (Sensor 2) 4P connector.
8. At the secondary HO2S (Sensor 2) side, measure resistance between secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR

Terminal side of male terminals

Fig. 40: Identifying Resistance Between Secondary HO2S Connector Terminals 3 And 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 5.4-6.6 ohms at room temperature?

YES - Go to step 9.

NO - Go to step 20.

9. At the secondary HO2S (sensor 2) side, check for continuity between body ground and secondary HO2S (Sensor 2) 4P connector terminals No. 3 and No. 4 individually.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR

Terminal side of male terminals

Fig. 41: Identifying Continuity Between Body Ground And Secondary HO2S Connector Terminals 3 And 4

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Go to step 10.

10. Jump the SCS line with the HDS.
11. Disconnect PCM connector C (49P).
12. Check for continuity between PCM connector terminal C5 (C7)* and body ground.

Fig. 42: Identifying Continuity Between PCM Connector Terminal C5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C5 (C7)*) and the secondary HO2S (Sensor 2), then go to step 21.

NO - Go to step 13.

13. Check for continuity between secondary HO2S (Sensor 2) 4P connector terminal No. 3 and PCM connector terminal C5 (C7)*

Fig. 43: Identifying Continuity Between Secondary HO2S Connector Terminal 3 And PCM Connector Terminal C5

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair open in the wire between the PCM (C5 (C7)*) and the secondary HO2S (Sensor 2), then go to step 21.

14. Disconnect the under-hood fuse/relay box 9P connector.
15. Check for continuity between secondary HO2S (Sensor 2) 4P connector terminal No. 4 and under-hood fuse/relay box 9P connector No. 9.

SECONDARY HO2S (SENSOR 2) 4P CONNECTOR

Fig. 44: Identifying Continuity Between Secondary HO2S Connector Terminal 4 And Under-Hood Fuse Connector 9

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 16.

NO - Repair open in the wire between the secondary HO2S (Sensor 2) and the under-hood fuse/relay box, then go to step 21.

16. Disconnect PCM connector A (49P).
17. Disconnect the under-hood fuse/relay box 14P connector.
18. Check for continuity between under-hood fuse/ relay box 14P connector terminal No. 13 and PCM connector terminal A40.

Fig. 45: Identifying Continuity Between Under-Hood Fuse Connector Terminal 13 And PCM Connector Terminal A40

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair open in the wire between the PCM (A40) and the under-hood fuse/relay box, then go to step 21.

19. Test the PGM-FI subrelay in the under-hood fuse/ relay box (see **POWER RELAY TEST**).

Is the PGM-FI subrelay OK?

YES - Go to step 27.

NO - Replace the relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**), then go to step 21.

20. Replace the secondary HO2S (Sensor 2) (see **SECONDARY HO2S REPLACEMENT**).
21. Reconnect all connectors.
22. Turn the ignition switch ON (II).
23. Reset the PCM with the HDS.
24. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 and/or P0161 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM, then go to step 1.

NO - Go to step 26.

26. Monitor the OBD STATUS for DTC P0141 and/or P0161* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 25, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0141 and/or P0161 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 30.

30. Monitor the OBD STATUS for DTC P0141 and/or P0161* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 29, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2), the under-hood fuse/relay box (PGM-FI subrelay), and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P0171: REAR BANK (BANK 1) FUEL SYSTEM TOO LEAN; DTC P0172: REAR BANK (BANK 1) FUEL SYSTEM TOO RICH; DTC P0174: FRONT BANK (BANK 2) FUEL SYSTEM TOO LEAN; DTC P0175: FRONT BANK (BANK 2) FUEL SYSTEM TOO RICH

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see

GENERAL TROUBLESHOOTING INFORMATION).

- If some of the DTCs listed below are stored at the same time as DTC P0171, P0172, P0174, and/or P0175, troubleshoot those DTCs first, then recheck for P0171, P0172, P0174, and/or P0175.

P0101, P0102, P0103: Mass air flow (MAF) sensor

P0107, P0108, P1128, P1129: Manifold absolute pressure (MAP) sensor

P0133, P0153, P1172, P1174, P2195, P2197, P2237, P2238, P2240, P2241, P2243, P2245, P2247, P2249, P2251, P2252, P2254, P2255, P2A00, P2A03: Air fuel ratio (A/F) sensor (Sensor 1)

P0134, P0135, P0154, P0155: Air fuel ratio (A/F) sensor (Sensor 1) heater

P0137, P0138, P0139, P0157, P0158, P0159, P2270, P2271, P2272, P2273: Secondary HO2S (Sensor 2)

P0141, P0161: Secondary HO2S (Sensor 2) heater

P2646, P2647, P2648, P2649: VTEC system

P0401, P0404, P0406, P2413: Exhaust gas recirculation (EGR) system

P2279: Intake air leakage

1. Check the fuel pressure (see **FUEL PRESSURE TEST**).

Is the fuel pressure OK?

YES - Go to step 2.

NO -

- If the pressure is too high, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**), then go to step 7.
- If the pressure is too low, check the fuel pump, the fuel feed pipe and the fuel filter. If they are OK, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**), then go to step 7.

2. Check for vacuum leaks at these parts:

- PCV valve
- PCV hose
- EVAP canister purge valve
- Throttle body

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

- Intake manifold
- Brake booster
- Brake booster hose
- Air intake duct

Are the parts OK?

YES - Go to step 3.

NO - Repair or replace parts with leaks, then go to step 7.

3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 176°F (80°C)
 - Transmission in Park or neutral
 - All electrical loads off
5. Monitor the ENGINE SPEED in the DATA LIST with the HDS, and hold the engine speed at 2,500 rpm. Once the engine speed is met, hold the accelerator pedal steady for more than 10 seconds.

Did the engine speed vary more than 100 rpm from 2,500 rpm?

YES - Repeat step 5.

NO - Go to step 6.

6. While holding the engine speed at 2,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

Is there about 9.8- 11.9 gm/s?

YES - Check the engine valve clearances and adjust if necessary (see **VALVE CLEARANCE ADJUSTMENT**). If the valve clearances are OK, replace the injectors (see **INJECTOR REPLACEMENT**), then go to step 7.

NO - Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**), then go to step 7.

7. Turn the ignition switch ON (II).
8. Reset the PCM with the HDS.
9. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
10. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

11. Test-drive under these conditions:

- Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
- Transmission in D position
- Drive at a steady speed between 15-75 mph (24-120 km/h) for 15 minutes.

NOTE: DTC P0171, P0172, P0174, and/or P0175 may take up to 80 minutes of test driving to set. Using the HDS, monitor the long term fuel trim (LT FUEL TRIM) or the air fuel feed back average (AF FB AVE). If the long term fuel trim/air fuel feed back average stays within 0.84-1.18, there is no problem at this time.

12. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0171, P0172, P0174, or P0175 indicated?

YES - Go to step 1 and recheck.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0300: RANDOM MISFIRE AND ANY COMBINATION OF THE FOLLOWING: DTC P0301: NO. 1 CYLINDER MISFIRE DETECTED; DTC P0302: NO. 2 CYLINDER MISFIRE DETECTED; DTC P0303: NO. 3 CYLINDER MISFIRE DETECTED; DTC P0304: NO. 4 CYLINDER MISFIRE DETECTED; DTC P0305: NO. 5 CYLINDER MISFIRE DETECTED; DTC P0306: NO. 6 CYLINDER MISFIRE DETECTED

Special Tools Required

- Pressure gauge adapter 07NAJ-P07010A
- A/T low pressure gauge w/panel 07406-0070301
- A/T pressure hose 07406-0020201
- A/T pressure hose, 2,210 mm 07MAJ-PY4011A
- A/T pressure adapter 07MAJ-PY40120
- Oil pressure hose 07ZAJ-S5AA200

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If the misfire is frequent enough to trigger detection of increased emissions during two consecutive driving cycles, the MIL will come on, and DTC P0300 (and some combination of P0301 through P0306) will be stored.
- If the misfire is frequent enough to damage the catalyst, the MIL will blink

whenever the misfire occurs, and DTC P0300 (and some combination of P0301 through P0306) will be stored. When the misfire stops, the MIL will remain on.

- Troubleshoot the following DTCs first, if any of them were stored along with the random misfire DTC(s) (Because parts can sometimes fail without setting DTC's you should also do a physical inspection of the below systems.):

P0101, P0102, P0103: Mass air flow (MAF)

P0107, P0108, P1128, P1129: Manifold absolute pressure (MAP) sensor

P0171, P0172, P0174, P0175: Fuel system

P0335, P0339, P0385, P0389: Crankshaft position (CKP) sensor A/B

P0506, P0507: Idle control system

P0340, P0344: Camshaft position (CMP) sensor

P2646, P2647, P2648, P2649: VTEC system

P0401, P0404, P0406, P2413: Exhaust gas recirculation (EGR) system

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load (in Park or neutral).
4. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 9.

NO - If the screen indicates PASSED, go to step 5. If the screen indicates EXECUTING, let it idle until a result comes on. If the screen indicates OUT OF CONDITION, wait for several minutes, then recheck.

5. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 9.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Go to step 6.

6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - ECT SENSOR 1
 - APP SENSOR
7. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 9.

NO - If the screen indicates PASSED, go to step 8. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6 and recheck.

8. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 9.

NO - Intermittent failure, the system is OK at this time.

9. Turn the ignition switch OFF.
10. Check the fuel quality.

Is the quality good?

YES - Go to step 11.

NO - Drain the tank, and fill it with a known-good fuel, then go to step 24.

11. Inspect the spark plugs (see **SPARK PLUG INSPECTION**). If the spark plugs are fouled or worn, replace them.
12. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - REL TP SENSOR

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

- CLV (calculated load value)
- ECT SENSOR 1
- APP SENSOR

13. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 14.

NO - Go to step 24.

14. Check the fuel pressure (see **FUEL PRESSURE TEST**).

Is the fuel pressure OK?

YES - Go to step 15.

NO -

- If the pressure is too high, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**), then go to step 24.
- If the pressure is too low, check the fuel pump, the fuel feed lines, and the fuel filter. If they are OK, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**), then go to step 24.

15. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.

16. Check for these conditions:

- Engine coolant temperature (ECT SENSOR 1) above 176°F (80°C)
- Transmission in Park or neutral
- All electrical loads off

17. Monitor the ENGINE SPEED in the DATA LIST with the HDS, and hold the engine speed at 2,500 rpm. Once the engine speed is met, hold the accelerator pedal steady for more than 10 seconds.

Did the engine speed vary more than 100 rpm from 2,500 rpm?

YES - Repeat step 17.

NO - Go to step 18.

18. While holding the engine speed at 2,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

Is there about 9.8-11.9 gm/s?

YES - Go to step 19.

NO - Replace the MAF sensor/IAT sensor (see MAF SENSOR/IAT SENSOR REPLACEMENT), then go to step 24.

19. Turn the ignition switch OFF.
20. Remove the rocker arm oil pressure switch (A), and install the special tools as shown, then install the rocker arm oil pressure switch in the pressure gauge adapter (B).

NOTE: Install the parts in the reverse order of removal with a new O-ring.

Fig. 46: Identifying Rocker Arm Oil Pressure Switch And Pressure Gauge Adapter With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Reconnect the rocker arm oil pressure switch 2P connector.
22. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on.
23. Check the oil pressure at engine speeds of 1,000 and 2,000 rpm. Keep the measuring time as short as possible (less than 1 minute) because the engine is running without load.

Is the oil pressure below 49 kPa (0.5 kgf/cm² , 7 psi)?

YES - Remove the oil pressure gauge, and reinstall the rocker arm oil pressure switch, then go to step 24.

NO - Inspect the VTEC system (see VTEC ROCKER ARM TEST), then go to step 24.

24. Turn the ignition switch ON (II).
25. Reset the PCM with the HDS.
26. Clear the CKP pattern with the HDS.
27. Do the PCM idle learn procedure (see PCM IDLE LEARN PROCEDURE).

28. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
29. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
- ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - ECT SENSOR 1
 - APP SENSOR
30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0300 and any combination of DTC P0301, P0302, P0303, P0304, P0305, or P0306 indicated?

YES - Check for poor connections or loose terminals at the ignition coil, the injector, and the PCM, then go to **DTC P0301, P0302, P0303, P0304, P0305, or P0306** troubleshooting.

NO - Go to step 27.

31. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 30, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connection or loose terminals at the ignitions coil, the injector, and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 29.

DTC P0301: NO. 1 CYLINDER MISFIRE DETECTED; DTC P0302: NO. 2 CYLINDER MISFIRE DETECTED; DTC P0303: NO. 3 CYLINDER MISFIRE DETECTED; DTC P0304: NO. 4 CYLINDER MISFIRE DETECTED; DTC P0305: NO. 5 CYLINDER MISFIRE DETECTED; DTC P0306: NO. 6 CYLINDER MISFIRE DETECTED

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle without load for 2 minutes (in Park or neutral).
4. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

with the HDS.

Does the screen indicate FAILED?

YES - Go to step 9.

NO - If the screen indicates PASSED, go to step 5. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, wait for several minutes, and recheck.

5. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 9.

NO - Go to step 6.

6. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - APP SENSOR
7. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 9.

NO - If the screen indicates PASSED, go to step 8. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6.

8. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 9.

NO - Intermittent failure, the system is OK at this time. Check the fuel and ignition system circuit connectors for loose wires or poor connections.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

9. Turn the ignition switch OFF.
10. Exchange the ignition coil from the problem cylinder with one from another cylinder.
11. Reconnect all connectors.
12. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - APP SENSOR

13. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 14.

NO - Intermittent failure due to poor contact at the ignition coil contactor (no misfire at this time). Make sure that the ignition coil connectors are secure.

14. Determine which cylinder had the misfire.

Does the misfire occur in the cylinder where the ignition coil was moved?

YES - Replace the faulty ignition coil (see **IGNITION COIL REMOVAL/INSTALLATION**), then go to step 53.

NO - Go to step 15.

15. Turn the ignition switch OFF.
16. Exchange the spark plug from the problem cylinder with the one from another cylinder.
17. Reconnect all connectors.
18. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - APP SENSOR

19. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6

MISFIRE show misfire counts?

YES - Go to step 20.

NO - Intermittent failure due to spark plug fouling (no misfire at this time).

20. Determine which cylinder had the misfire.

Does the misfire occur in the cylinder where the spark plug was moved?

YES - Replace the faulty spark plug, then go to step 53.

NO - Go to step 21.

21. Turn the ignition switch OFF.
22. Disconnect the ignition coil 3P connector from the problem cylinder.
23. Turn the ignition switch ON (II).
24. Measure voltage between ignition coil 3P connector terminal No. 3 and body ground.

IGNITION COIL 3P CONNECTOR

Wire side of female terminals

Fig. 47: Identifying Voltage Between Ignition Coil 3P Connector Terminal 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 25.

NO - Repair open in the wire between the ignition coil and the under-hood fuse/relay box, then go to step 53.

25. Turn the ignition switch OFF.
26. Check for continuity between ignition coil 3P connector terminal No. 2 and body ground.

IGNITION COIL 3P CONNECTOR

Wire side of female terminals

Fig. 48: Identifying Continuity Between Ignition Coil 3P Connector Terminal 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the ignition coil, G101, then go to step 53.

27. Jump the SCS line with the HDS.
28. Disconnect PCM connector B (49P).
29. Check for continuity between body ground and the appropriate PCM connector terminal (see table).

PCM TERMINAL AND WIRE COLOR REFERENCE

PROBLEM CYLINDER	DTC	PCM TERMINAL	WIRE COLOR
No. 1	P0301	B29	YEL/GRN
No. 2	P0302	B30	BLU/RED
No. 3	P0303	B22	WHT/BLU
No. 4	P0304	B23	BRN
No. 5	P0305	B11	BLK/RED
No. 6	P0306	B12	BRN/WHT

Fig. 49: Identifying Continuity Between Body Ground And PCM Connector Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM and the ignition coil, then go to step 53.

NO - Go to step 30.

30. Check for continuity between appropriate ignition coil 3P connector terminal No. 1 and the appropriate PCM connector terminal of the problem cylinder (see table).

PCM TERMINAL AND WIRE COLOR REFERENCE

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 51: Identifying Continuity Between Ignition Coil 3P Connector Terminal 1 And PCM Connector Terminal 12

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 31.

NO - Repair open in the wire between the PCM and the ignition coil, then go to step 53.

31. Remove the intake manifold (see **REMOVAL**).
32. Turn the ignition switch ON (II).

33. Measure voltage between body ground and the appropriate PCM connector terminal (see table).

PCM TERMINAL AND WIRE COLOR REFERENCE

PROBLEM CYLINDER	DTC	PCM TERMINAL	WIRE COLOR
No. 1	P0301	B4	BRN
No. 2	P0302	B8	RED

No. 6	P0306	B9	WHT/BLU

Fig. 52: Identifying Voltage Between Body Ground And PCM Connector Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 41.

NO - Go to step 34.

34. Turn the ignition switch OFF.
35. Disconnect the injector 2P connector from the problem cylinder.
36. Turn the ignition switch ON (II).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

37. Measure voltage between injector 2P connector terminal No. 1 and body ground.

INJECTOR 2P CONNECTOR

Wire side of female terminals

Fig. 53: Identifying Voltage Between Injector 2P Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 38.

NO - Repair open in the wire between the injector and under-hood fuse/relay box (PGM-FI main relay 1), then go to step 51.

38. Turn the ignition switch OFF.
39. Check for continuity between body ground and the appropriate PCM connector terminal (see table).

PCM TERMINAL AND WIRE COLOR REFERENCE

PROBLEM CYLINDER	DTC	PCM TERMINAL	WIRE COLOR
No. 1	P0301	B4	BRN
No. 2	P0302	B8	RED

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 56: Identifying Continuity Between Injector 2P Connector Terminal 2 And PCM Connector Terminal 5

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for poor connections or loose terminals at the injector and under-hood fuse/relay box (PGM-FI main relay 1), then go to step 41.

NO - Repair open in the wire between the PCM and the injector, then go to step 53.

41. Measure resistance between injector 2P connector terminals No. 1 and No. 2.

INJECTOR 2P CONNECTOR

Terminal side of male terminals

Fig. 57: Identifying Resistance Between Injector 2P Connector Terminals 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 10-13 ohms?

YES - Go to step 42.

NO - Replace the injector (see **INJECTOR REPLACEMENT**), then go to step 53.

42. Exchange the injector from the problem cylinder with the one from another cylinder. Also check the injector fuel inlet screen for debris, and clean if needed.
43. Reconnect all connectors, and install the intake manifold (see **INTAKE MANIFOLD REMOVAL AND INSTALLATION**).
44. Turn the ignition switch ON (II).
45. Clear the DTCs with the HDS.
46. Start the engine, and let it idle without load (in Park or neutral) for 2 minutes.
47. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - APP SENSOR
48. Check the CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE in the DATA LIST for 10 minutes with the HDS.

Does CYL1 MISFIRE, CYL2 MISFIRE, CYL3 MISFIRE, CYL4 MISFIRE, CYL5 MISFIRE, and/or CYL6 MISFIRE show misfire counts?

YES - Go to step 49.

NO - Intermittent failure due to poor contact in the injector connector (no misfire at this time). Check for poor connections or loose terminals at the injector.

49. Determine which cylinder had the misfire.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Does the misfire occur in the cylinder where the injector was moved?

YES - Replace the faulty injector (see **INJECTOR REPLACEMENT**), then go to step 53.

NO - Go to step 50.

50. Turn the ignition switch OFF.

51. Do an engine compression and a cylinder leakdown test (see **ENGINE COMPRESSION INSPECTION**).

Did the engine pass both tests?

YES - Go to step 52.

NO - Repair the engine, then go to step 53.

52. Do the VTEC rocker arm test (see **VTEC ROCKER ARM TEST**).

Did the engine pass the test?

YES - Go to step 61.

NO - Repair the VTEC rocker arm, then go to step 53.

53. Reconnect all connectors.

54. Reset the PCM with the HDS.

55. Clear the CKP pattern with the HDS.

56. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).

57. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

58. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:

- ENGINE SPEED
- VSS
- REL TP SENSOR
- CLV (calculated load value)
- APP SENSOR

59. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0301, P0302, P0303, P0304, P0305, or P0306 indicated?

YES - Check for poor connections or loose terminals at the ignition coil, the injector, and the PCM, then go to **P0301, P0302, P0303, P0304, or P0305** .

NO - Go to step 60.

60. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 59, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the ignition coil, the injector, and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 58.

61. Reconnect all connectors.
62. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**),
63. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
- ENGINE SPEED
 - VSS
 - REL TP SENSOR
 - CLV (calculated load value)
 - APP SENSOR
64. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0301, P0302, P0303, P0304, P0305, or P0306 indicated?

YES - Check for poor connections or loose terminals at the ignition coil, the injector, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 63. If the PCM was substituted, go to step 1.

NO - Go to step 65.

65. Monitor the OBD STATUS for DTC P0301, P0302, P0303, P0304, P0305, or P0306 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**), If any other Temporary DTCs or DTCs were indicated in step 64, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the ignition coil, the injector, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 63. If the PCM was substituted, go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 63.

DTC P0325: KNOCK SENSOR CIRCUIT MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Hold the engine speed at 3,000-4,000 rpm for at least 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the knock sensor and the PCM.

6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect the knock sensor subharness 1P connector.
9. Disconnect PCM connector C (49P).
10. Check for continuity between PCM connector terminal C47 and body ground.

Terminal side of female terminals

Fig. 58: Identifying Continuity Between PCM Connector Terminal C47 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C47) and the knock sensor subharness, then go to step 19.

NO - Go to step 11.

11. Connect the knock sensor subharness 1P connector terminal to body ground with a jumper wire.

KNOCK SENSOR SUBHARNESS 1P CONNECTOR

Wire side of female terminals

Fig. 59: Identifying Knock Sensor Subharness 1P Connector Terminal To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check for continuity between PCM connector terminal C47 and body ground.

Terminal side of female terminals

Fig. 60: Identifying Continuity Between PCM Connector Terminal C47 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is Mere continuity?

YES - Go to step 13.

NO - Repair open in the wire between the PCM (C47) and the knock sensor subharness, then go to step 19.

13. Remove the intake manifold (see **REMOVAL**), and the injector base (see **INJECTOR BASE REMOVAL AND INSTALLATION**).
14. Disconnect the knock sensor 1P connector.
15. Check for continuity between the knock sensor subharness 1P connector terminal and body ground.

KNOCK SENSOR SUBHARNESS 1P CONNECTOR

Wire side of female terminals

Fig. 61: Identifying Continuity Between Knock Sensor Subharness 1P Connector Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the knock sensor subharness, then go to step 18.

NO - Go to step 16.

16. Check for an open in the knock sensor subharness.

Is the harness OK?

YES - Go to step 17.

NO - Repair open in the knock sensor subharness, then go to step 19.

17. Replace the knock sensor (see **KNOCK SENSOR REPLACEMENT**).
18. Install the injector base (see **INJECTOR BASE REMOVAL AND INSTALLATION**), and the intake manifold (see **INTAKE MANIFOLD REMOVAL AND INSTALLATION**).
19. Reconnect all connectors.
20. Turn the ignition switch ON (II).
21. Reset the PCM with the HDS.
22. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
23. Hold the engine speed at 3,000-4,000 rpm for at least 10 seconds.
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?

YES - Go to step 26.

NO - Go to step 25.

25. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 24, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the knock sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 23.

26. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
27. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
28. Hold the engine speed at 3,000-4,000 rpm for at least 10 seconds.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0325 indicated?

YES - Check for poor connections or loose terminals at the ignition coil, the injector, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 28. If the PCM was substituted, go to step 1.

NO - Go to step 30.

30. Monitor the OBD STATUS for DTC P0325 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 29, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the ignition coil, the injector, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 28. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 28.

DTC P0335: CKP SENSOR A NO SIGNAL; DTC P0385: CKP SENSOR B NO SIGNAL

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Information marked with an asterisk (*) applies to CKP sensor B.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.

3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 and/or P0385 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at CKP sensor A/B and the PCM.

5. Turn the ignition switch OFF.
6. Disconnect CKP sensor A/B 6P connector (see **CKP SENSOR REPLACEMENT**).
7. Turn the ignition switch ON (II).
8. Measure voltage between CKP sensor A/B 6P connector terminal No. 6 (No. 3)* and body ground.

Wire side of female terminals

Fig. 62: Identifying Voltage Between CKP Sensor A/B 6P Connector Terminal 6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Repair open in the wire between CKP sensor A/B and the under-hood fuse/relay box (PGM-FI main relay 1), then go to step 18.

9. Measure voltage between CKP sensor A/B 6P connector terminal No. 5 (No. 2)* and body ground.

Fig. 63: Identifying Voltage Between CKP Sensor A/B 6P Connector Terminal 5 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 10.

NO - Go to step 11.

10. Measure voltage between CKP sensor A/B 6P connector terminals No. 4 (No. 1)* and No. 6 (No. 3)*.

Fig. 64: Identifying Voltage Between CKP Sensor A/B 6P Connector Terminals 4 And 6
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 16.

NO - Repair open in the wire between CKP sensor A/B and G101, then go to step 18.

11. Turn the ignition switch OFF.
12. Jump the SCS line with the HDS.
13. Disconnect PCM connector B (49P).
14. Check for continuity between PCM connector terminal B45 (B44)* and CKP sensor A/B 6P connector No. 5 (No. 2)*.

Fig. 65: Identifying Continuity Between PCM Connector Terminal B45 And CKP Sensor A/B 6P Connector 5

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair open in the wire between the PCM (B45 (B44)*) and CKP sensor A/B, then go to step 18.

15. Check for continuity between PCM connector terminal B45 (B44)* and body ground.

Fig. 66: Identifying Continuity Between PCM Connector Terminal B45 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B45 (B44) *) and CKP sensor A/B, then go to step 18.

NO - Go to step 25.

16. Turn the ignition switch OFF.
17. Replace CKP sensor A/B (see **CKP SENSOR REPLACEMENT**).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Clear the CKP pattern with the HDS.
22. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
23. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 and/or P0385 indicated?*

YES - Check for poor connections or loose terminals at CKP sensor A/B and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to .

25. Reconnect all connectors.
26. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0335 and/or P0385 indicated?*

YES - Check for poor connections or loose terminals at CKP sensor A/B and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0339: CKP SENSOR A INTERMITTENT INTERRUPTION; DTC P0389: CKP SENSOR B INTERMITTENT INTERRUPTION

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Information marked with an asterisk (*) applies to CKP sensor B.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle for 10 minutes in the range of these recorded freeze data parameters:

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

- ENGINE SPEED
- VSS

4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0339 and/or P0389 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at CKP sensor A/B and the PCM.

5. Check for poor or loose connections at these connectors and terminals:

- CKP sensor A/B
- PCM
- Engine ground
- Body ground

Are the connections OK?

YES - Go to step 6.

NO - Reconnect the connectors or terminals, then go to step 9.

6. Check for damage to the CKP sensor A/B pulse plate on the timing belt drive pulley (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).

Is there damage?

YES - Replace the CKP sensor A/B pulse plate/ timing belt drive pulley (see **TIMING BELT DRIVE PULLEY REPLACEMENT**), then go to step 9.

NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Replace CKP sensor A/B (see **CKP SENSOR REPLACEMENT**).
9. Turn the ignition switch ON (II).
10. Reset the PCM with the HDS.
11. Clear the CKP pattern with the HDS.
12. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
13. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
14. Test-drive the vehicle for 10 minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED

- VSS

15. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0339 and/or P0389 indicated?*

YES - Check for poor connections or loose terminals at CKP sensor A/B and the PCM, then go to step 1.

NO - Troubleshooting is complete; If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0340: CMP SENSOR NO SIGNAL

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0340 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CMP sensor and the PCM.

5. Turn the ignition switch OFF.
6. Disconnect the CMP sensor 3P connector.
7. Turn the ignition switch ON (II).
8. Measure voltage between CMP sensor 3P connector terminal No. 3 and body ground.

CMP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 67: Identifying Voltage Between CMP Sensor 3P Connector Terminal 3 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Repair open in the wire between the CMP sensor and under-hood fuse/relay box (PGM-FI main relay 1), then go to step 18.

9. Measure voltage between CMP sensor 3P connector terminal No. 1 and body ground.

CMP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 68: Identifying Voltage Between CMP Sensor 3P Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 10.

NO - Go to step 11.

10. Measure voltage between CMP sensor 3P connector terminals No. 2 and No. 3.

CMP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 69: Identifying Voltage Between CMP Sensor 3P Connector Terminals 2 And 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 16.

NO - Repair open in the wire between the CMP sensor and G101, then go to step 18.

11. Turn the ignition switch OFF.
12. Jump the SCS line with the HDS.
13. Disconnect PCM connector B (49P).
14. Check for continuity between PCM connector terminal B46 and CMP sensor 3P connector terminal No. 1.

Fig. 70: Identifying Continuity Between PCM Connector Terminal B46 And CMP Sensor 3P Connector Terminal 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair open in the wire between the PCM (B46) and the CMP sensor, then go to step 18.

15. Check for continuity between CMP sensor 3P connector terminal No. 1 and body ground.

Fig. 71: Identifying Continuity Between CMP Sensor 3P Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B46) and the CMP sensor, then go to step 18.

NO - Go to step 26.

16. Turn the ignition switch OFF.
17. Replace the CMP sensor (see **CMP SENSOR REPLACEMENT**).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Clear the CKP pattern with the HDS.
22. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
23. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
24. Start the engine.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0340 indicated?

YES - Check for poor connections or loose terminals at the CMP sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

26. Reconnect all connectors.
27. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0340 indicated?

YES - Check for poor connections or loose terminals at the CMP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle for 10 minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0344 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the CMP sensor and the PCM.

5. Check for poor or loose connections at these connectors and terminals:
 - CMP sensor
 - PCM
 - Engine ground
 - Body ground

Are the connections OK?

YES - Go to step 6.

NO - Reconnect or repair the connectors or terminals, then go to step 9.

6. Check for damage to the CMP sensor pulse projection on the front camshaft pulley (see **CMP SENSOR REPLACEMENT**).

Is there damage?

YES - Replace the front camshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**), then go to step 9.

NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Replace the CMP sensor (see **CMP SENSOR REPLACEMENT**).
9. Turn the ignition switch ON (II).

10. Reset the PCM with the HDS.
11. Clear the CKP pattern with the HDS.
12. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
13. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
14. Test-drive the vehicle for 10 minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
15. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0344 indicated?

YES - Check for poor connections or loose terminals at the CMP sensor and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P050A: COLD START IDLE AIR CONTROL SYSTEM PERFORMANCE PROBLEM

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs other than P050A indicated?

YES - Go to the indicated DTCs troubleshooting.

NO - Go to step 3.

3. Check for poor connections or blockage at the intake air duct.

Is it OK?

YES - Go to step 4.

NO - Reconnect or repair the intake air duct, then go to step 19.

4. Check for damage at the air cleaner housing.

Is it OK?

YES - Go to step 5.

NO - Replace the air cleaner housing (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**), then go to step 19.

5. Check for dirt or debris in the air cleaner element.

Is it dirty?

YES - Replace the air cleaner element or remove the debris (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**), then go to step 19.

NO - Go to step 6.

6. Let the engine cool until the value of ECT SENSOR 1 is 122°F (50°C) or less.
7. Clear the DTC with the HDS.
8. Start the engine, and let it idle for 10 seconds or more.
9. Monitor the OBD STATUS for DTC P050A in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 10.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6 and recheck.

10. Do the ETCS TEST in the INSPECTION MENU with the HDS.

Is the THROTTLE ACTUATOR CONTROL VALVE normal?

YES - Go to step 11.

NO - Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**), then go to step 19.

11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. While holding the engine speed at 2,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

Is there about 9.6- 12.9 gm/s?

YES - Go to step 13.

NO - Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**),

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

then go to step 19.

13. Turn the ignition switch OFF.
14. Allow the engine to cool to ambient temperature.
15. Note the ambient temperature.
16. Turn the ignition switch ON (II).
17. Note the value of IAT SENSOR quickly in the DATA LIST with the HDS.
18. Compare the value of the IAT SENSOR and the ambient temperature.

Does the value of the IAT SENSOR differ 5.4°F (3°C) or more?

YES - Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**), then go to step 19.

NO - Check for dirt, carbon, or damage in the throttle bore. If there is dirt or carbon, clean the throttle body (see **THROTTLE BODY CLEANING**), then go to step 19. If there is damage in the throttle bore, replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**), then go to step 19.

19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Let the engine cool until the value of ECT SENSOR 1 is 122°F (50°C) or less.
22. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P050A indicated?

YES - Check for poor connections or loose terminals at the throttle body, the MAF sensor/IAT sensor, and the PCM, then go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P050A in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the throttle body, the MAF sensor/IAT sensor, and the PCM, then go to step 1. If the screen indicates EXECUTING, let the engine idle until a result comes on. if the screen indicates OUT OF CONDITION, go to step 22.

DTC P050B: COLD START IGNITION TIMING PERFORMANCE PROBLEM

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs other than P050B indicated?

YES - Go to the indicated DTCs troubleshooting.

NO - Go to step 3.

3. Check for poor connections or blockage at the intake air duct.

Is it OK?

YES - Go to step 4.

NO - Reconnect or repair the intake air duct, then go to step 25.

4. Check for damage at the air cleaner housing.

Is it OK?

YES - Go to step 5.

NO - Replace the air cleaner housing (see AIR CLEANER REMOVAL/INSTALLATION), then go to step 25.

5. Check for dirt or debris in the air cleaner element.

Is it dirty?

YES - Replace the air cleaner element or remove the debris (see AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT), then go to step 25.

NO - Go to step 6.

6. Let the engine cool until the value of ECT SENSOR 1 is 122°F (50°C) or less.
7. Clear the DTC with the HDS.
8. Start the engine, and let it idle for 10 seconds or more.
9. Monitor the OBD STATUS for DTC P050B in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

YES - Go to step 10.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, let the engine idle until a result comes on. If the screen indicates OUT OF CONDITION, go to step 6 and recheck.

10. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).

Is the ignition timing OK?

YES - Go to step 12.

NO - Go to step 11.

11. Check for damage at CKP sensor A/B (see **CKP SENSOR REPLACEMENT**) and the timing belt drive pulley (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).

Is CKP sensor A/B and/or the CKP sensor pulser plate damaged?

YES - Replace the CKP sensor (see **CKP SENSOR REPLACEMENT**) and/or the timing belt drive pulley (see **TIMING BELT DRIVE PULLEY REPLACEMENT**), then go to step 6.

NO - Go to step 30.

12. Do the ETCS TEST in the INSPECTION MENU with the HDS.

Is the THROTTLE ACTUATOR CONTROL VALVE normal?

YES - Go to step 13.

NO - Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**), then go to step 25.

13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
14. While holding the engine speed at 2,500 rpm, check the MAF SENSOR in the DATA LIST with the HDS.

Is there about 9.6-12.9 gm/s?

YES - Go to step 15.

NO - Replace the MAF sensor/IAT sensor (see **MAF SENSOR/IAT SENSOR REPLACEMENT**), then go to step 25.

15. Turn the ignition switch OFF.

16. Drain the coolant (see **COOLANT CHECK**).
17. Remove ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), and ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**).
18. Allow the sensors to cool to ambient temperature.
19. Note the ambient temperature.
20. Connect ECT sensor 1 to its 2P connector, and ECT sensor 2 to its 2P connector, but do not install them on the engine.
21. Turn the ignition switch ON (II).
22. Note the value of ECT SENSOR 1 and ECT SENSOR 2 quickly in the DATA LIST with the HDS.
23. Compare the value of ECT SENSOR 1 and the ambient temperature, and the value of ECT SENSOR 2 and the ambient temperature individually.

Does either sensor differ more than 5.4°F (3°C) from the ambient temperature?

YES - Replace the sensor that differed more than 5.4°F (3°C) from the ambient temperature, then go to step 24.

NO - Check and repair any problems with the following items, then go to step 25.

- Engine compression and cylinder leakdown
- VTEC system
- Engine oil
- A/C system
- Power steering

24. Refill the engine coolant (see **COOLANT CHECK**).
25. Turn the ignition switch ON (II).
26. Reset the PCM with the HDS.
27. Let the engine cool until the value of ECT SENSOR 1 is 122°F (50°C) or less.
28. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P050B indicated?

YES - Check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the PCM, then go to step 1.

NO - Go to step 30.

30. Monitor the OBD STATUS for DTC P050B in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 28, go to the indicated DTCs troubleshooting.

NO - If the screen indicates **FAILED**, check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the PCM, then go to step 1. If the screen indicates **EXECUTING**, keep driving until a result comes on. If the screen indicates **OUT OF CONDITION**, go to step 27.

31. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
32. Let the engine cool until the value of ECT SENSOR 1 is 122°F (50°C) or less.
33. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
34. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P050B indicated?

YES - Check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 32. If the PCM was substituted, go to step 1.

NO - Go to step 35.

35. Monitor the OBD STATUS for DTC P050B in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 34, go to the indicated DTCs troubleshooting.

NO - If the screen indicates **FAILED**, check for poor connections or loose terminals at the CKP sensor, the throttle body, the MAF sensor/IAT sensor, ECT sensor 1, ECT sensor 2, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 32. If the PCM was substituted, go to step 1. If the screen indicates **EXECUTING**, keep driving until a result comes on. If the screen indicates **OUT OF CONDITION**, go to step 32.

DTC P0562: CHARGING SYSTEM LOW VOLTAGE

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- If any high current load accessories are installed, this DTC can be set.
- If DTC P16BB and/or P16BC is stored at the same time as DTC P0562, troubleshoot DTC P16BB and/or P16BC first, then recheck for DTC P0562.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check under these conditions:
 - A/C on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
5. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0562 indicated?

YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), then go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator and the main under-hood fuse box, and check the battery performance (see **BATTERY TEST**).

7. Turn the ignition switch ON (II).
8. Reset the PCM with the HDS.
9. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
10. Start the engine.
11. Check under these conditions:
 - A/C on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
12. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0562 indicated?

YES - Check for poor connections or loose terminals at the alternator and the main under-hood fuse box, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0563: PCM POWER SOURCE CIRCUIT UNEXPECTED VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Wait 10 seconds.
5. Turn the ignition switch ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals under-hood fuse/relay box (PGM-FI main relay 1) and the No. 8 IGP (15 A) fuse in the under-hood fuse/relay box and the PCM.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Measure voltage between PCM connector terminal A6 and body ground.

Fig. 72: Identifying Voltage Between PCM Connector Terminal A6 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 13.

NO - Go to step 11.

11. Disconnect the under-hood fuse/relay box 14P connector.
12. Check for continuity between PCM connector terminal A6 and body ground.

Fig. 73: Identifying Continuity Between PCM Connector Terminal A6 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A6) and under-hood fuse/relay box (PGM-FI main relay 1), then go to step 19.

NO - Go to step 18.

13. Reconnect PCM connector A (49P).
14. Disconnect PCM connector B (49P).
15. Measure voltage between PCM connector terminal B3 and body ground.

Fig. 74: Identifying Voltage Between PCM Connector Terminal B3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 16.

NO - Go to step 18.

16. Disconnect the under-hood fuse/relay box 9P connector.
17. Measure voltage between PCM connector terminal B3 and body ground.

Fig. 75: Identifying Voltage Between PCM Connector Terminal B3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair short to power in the wire between the PCM (B3) and under-hood fuse/relay box (PGM-FI main relay 1), then go to step 19.

NO - Go to step 18.

18. Test PGM-FI main relay 1 in the under-hood fuse/ relay box (see **POWER RELAY TEST**).

Is PGM-FI main relay 1 OK?

YES - Go to step 26.

NO - Replace relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**), then go to step 19.

19. Reconnect all connectors.
20. Turn the ignition switch ON (II).
21. Reset the PCM with the HDS.
22. Turn the ignition switch OFF.
23. Wait 10 seconds.
24. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?

YES - Check for poor connections or loose terminals at under-hood fuse/relay box (PGM-FI main relay 1) and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

26. Reconnect all connectors.
27. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0563 indicated?

YES - Check for poor connections or loose terminals at under-hood fuse/relay box (PGM-FI main relay 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0602: PCM PROGRAMMING ERROR

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**
- **This DTC is indicated when a PCM update is not completed.**
- **Do not turn the ignition switch OFF while updating the PCM. If you turn the ignition switch OFF before completion, the PCM can be damaged.**

1. Do the PCM update procedure (see **PCM UPDATE**).
2. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0602 indicated?

YES - Replace the original PCM (see **PCM REPLACEMENT**).

NO - Update is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P060A: PCM (A/T SYSTEM) INTERNAL CONTROL MODULE MALFUNCTION

NOTE:

Before you troubleshoot, record all freeze data and any on-board snapshot, and

review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P060A indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM).
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P060A indicated?

YES - If the PCM was updated, substitute a known-good PCM (see SUBSTITUTING THE PCM), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete; If the PCM was substituted, replace the original PCM (see PCM REPLACEMENT). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0615: STARTER CUT RELAY STRLD CIRCUIT MALFUNCTION

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0615 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at starter cut relay 1, starter cut relay 2, and the PCM.

5. Turn the ignition switch OFF

6. Check the STRLD (7.5 A) fuse in the auxiliary under-dash fuse holder 2.

Is the fuse OK?

YES - Go to step 7.

NO - Replace the STRLD (7.5 A) fuse in the auxiliary under-dash fuse holder 2, then go to step 12.

7. Jump the SCS line with the HDS.
8. Disconnect PCM connector A (49P).
9. Remove starter cut relay 1 (A) from auxiliary under-dash relay box A.

Fig. 76: Identifying Starter Cut Relay

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Connect starter cut relay 1 4P connector terminal No. 2 to body ground with a jumper wire.

STARTER CUT RELAY 1 4P CONNECTOR

Terminal side of female terminals

Fig. 77: Identifying Starter Cut Relay 4P Connector Terminal 2 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between PCM connector terminal A28 and body ground.

Fig. 78: Identifying Continuity Between PCM Connector Terminal A28 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 17.

NO - Repair open in the wire between the PCM (A28) and starter cut relay 1, then go to step 12.

12. Reconnect all connectors.
13. Turn the ignition switch ON (II).
14. Reset the PCM with the HDS.
15. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0615 indicated?

YES - Check for poor connections or loose terminals at starter cut relay 1 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

17. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0615 indicated?

YES - Check for poor connections or loose terminals at starter cut relay 1 and the PCM, then go to step 1. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go

to the indicated DTCs troubleshooting.

DTC P062F: PCM INTERNAL CONTROL MODULE KEEP ALIVE MEMORY (KAM) ERROR

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM).
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P062F indicated?

YES - If the PCM was updated, substitute a known-good PCM (see SUBSTITUTING THE PCM), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see PCM REPLACEMENT). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0630: VIN NOT PROGRAMMED OR MISMATCH

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- This DTC is stored only when the PCM does not have the VIN information of the vehicle. Use the HDS to input the missing VIN information.

1. Turn the ignition switch ON (II).
2. Check the VIN with the HDS.

Does the HDS show the vehicle's VIN?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

YES - Go to step 5.

NO - Go to step 3.

3. Input the VIN to the PCM with the HDS.

Does the screen show COMPLETE?

YES - Go to step 5.

NO - Go to step 4.

4. Check for DTCs with the HDS.

Is DTC P062F indicated?

YES - Do the troubleshooting for P062F (see **DTC P062F: PCM Internal Control Module Keep Alive Memory (KAM) Error**).

NO - Go to step 9.

5. Clear the DTC with the HDS.
6. Turn the ignition switch OFF.
7. Turn the ignition switch ON (II), and wait 5 seconds.
8. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0603 indicated?

YES - Go to step 9.

NO - Intermittent failure, the system is OK at this time.

9. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
10. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0630 indicated?

YES - If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0685: PCM POWER CONTROL CIRCUIT/ INTERNAL CIRCUIT MALFUNCTION

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If the problem doesn't return after you clear the DTC, or if this DTC is stored intermittently, check for loose terminals at the IGP line connectors before replacing the PCM.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle for 30 seconds.
4. Turn the ignition switch OFF.
5. Start the engine, then let it idle for 30 seconds.
6. Turn the ignition switch OFF.
7. Turn the ignition switch ON (II).
8. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0685 indicated?

YES - Go to step 9.

NO - Intermittent failure, the system is OK at this time.

9. Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM).
10. Start the engine, then let it idle for 30 seconds.
11. Turn the ignition switch OFF.
12. Start the engine, then let it idle for 30 seconds.
13. Turn the ignition switch OFF.
14. Turn the ignition switch ON (II).
15. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0685 indicated?

YES - If the PCM was updated, substitute a known-good PCM (see SUBSTITUTING THE PCM), then go to step 10. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see PCM REPLACEMENT). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1109: BARO SENSOR CIRCUIT OUT OF RANGE HIGH

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Reset the PCM with the HDS.
2. Start the engine.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1109 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

4. Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM).
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1109 indicated?

YES - If the PCM was updated, substitute a known-good PCM (see SUBSTITUTING THE PCM), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see PCM REPLACEMENT). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1116: ECT SENSOR 1 RANGE/ PERFORMANCE PROBLEM

- NOTE:**
- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
 - If DTC P0111 is stored at the same time as DTC P1116, troubleshoot DTC P0111 first, then recheck for DTC P1116.

1. Check for poor connections or loose terminals at ECT sensor 1 and ECT sensor 2.

Are the connections and terminals OK?

YES - Go to step 2.

NO - Repair the connectors or terminals, then go to step 27.

2. Turn the ignition switch ON (II).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

3. Check for Temporary DTCs or DTCs with the HDS.

Are DTC P1116 and P2183 indicated at the same time?

YES - Go to step 15.

NO - Go to step 4.

4. Start the engine, and let it idle for 10 minutes.
5. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 129°F (54°C) or less, or 1.54 V or more indicated?

YES - Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), then go to step 28.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Drain the coolant (see **COOLANT CHECK**).
8. Remove ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**).
9. Allow ECT sensor 1 to cool to ambient temperature.
10. Note the ambient temperature.
11. Connect ECT sensor 1 to its 2P connector, but do not install it on the engine.
12. Turn the ignition switch ON (II).
13. Note the value of ECT SENSOR 1 quickly in the DATA LIST with the HDS.
14. Compare the value of ECT SENSOR 1 and the ambient temperature.

Does the value of ECT SENSOR 1 differ 5.4°F (3°C) or more?

YES - Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), then go to step 27.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

15. Start the engine, and let it idle for 10 minutes.
16. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 118°F (48°C) or less, or 1.75 V or more indicated?

YES - Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), then go to step 27.

NO - Go to step 17.

17. Let the engine idle for 10 minutes.

18. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about 131°F (55°C) or less, or 1.50 V or more indicated?

YES - Replace ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**), then go to step 27.

NO - Go to step 19.

19. Turn the ignition switch OFF.
20. Drain the coolant (see **COOLANT CHECK**).
21. Remove ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), and ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**).
22. Allow the sensors to cool to ambient temperature.
23. Note the ambient temperature.
24. Connect ECT sensor 1 to its 2P connector, and ECT sensor 2 to its 2P connector, but do not install them on the engine.
25. Note the value of ECT SENSOR 1 and ECT SENSOR 2 quickly in the DATA LIST with the HDS.
26. Compare the value of ECT SENSOR 1 and the ambient temperature, and the value of ECT SENSOR 2 and the ambient temperature individually.

Does one of the sensors differ more than 5.4°F (3°C) from the ambient temperature?

YES - Replace the sensor that differed more than 5.4°F (3°C) from the ambient temperature, then go to step 27.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, then reconnect all connectors, and refill the cooling system (see **COOLANT CHECK**).

27. Refill the engine coolant (see **COOLANT CHECK**).
28. Turn the ignition switch ON (II).
29. Reset the PCM with the HDS.
30. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
31. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0116 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Inspect the air cleaner element (see AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT).

Is it OK?

YES - Go to step 2.

NO - Clean or replace the air cleaner element (see AIR CLEANER REMOVAL/INSTALLATION).

2. Turn the ignition switch ON (II).
3. Check the MAP SENSOR in the DATA LIST with the HDS.

Is there less than 54.1 kPa (16.0 in.Hg, 406 mmHg) or 1.61 V held for more than 5 seconds?

YES - Go to step 8.

NO - Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
6. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Engine speed between 1,200-5,500 rpm
 - Transmission in D position
 - Vehicle speed accelerated from 16-31 mph (25-50 km/h) under half throttle
7. Monitor the OBD STATUS for DTC P1128 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 8.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the PCM. If the screen indicates NOT COMPLETED, go to step 5 and recheck.

8. Turn the ignition switch OFF.
9. Replace the MAP sensor (see MAP SENSOR REPLACEMENT).
10. Turn the ignition switch ON (II).
11. Reset the PCM with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

12. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
14. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Engine speed between 1,200-5,500 rpm
 - Transmission in D position
 - Vehicle speed accelerated from 16-31 mph (25-50 km/h) under half throttle
15. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1128 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the PCM, then go to step 1.

NO - Go to step 16.

16. Monitor the OBD STATUS for DTC P1128 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 15, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the MAP sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 14.

DTC P1129: MAP SENSOR SIGNAL HIGHER THAN EXPECTED

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Check for vacuum leaks at these parts:
 - PCV valve
 - PCV hose
 - EVAP canister purge valve
 - Throttle body
 - Intake manifold
 - Brake booster
 - Brake booster hose

Are there any vacuum leaks?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

YES - Repair or replace the part(s) with vacuum leaks, then go to step 9.

NO - Go to step 2.

2. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
3. Check the MAP SENSOR in the DATA LIST with the HDS.

Is there more than 36.9 kPa (11.0 in.Hg, 277 mmHg) or 1.14 V held for more than 5 seconds?

YES - Go to step 7.

NO - Go to step 4.

4. Clear the DTC with the HDS.
5. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Engine speed between 1,400-6,500 rpm
 - Transmission in D position
 - Drive at a steady speed between 55-75 mph (88-120 km/h) for 10 seconds.
 - During the drive, decelerate (with the throttle fully closed) for 2 seconds.
6. Monitor the OBD STATUS for DTC P1129 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 7.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the MAP sensor and the PCM. If the screen indicates NOT COMPLETED, go to step 5 and recheck.

7. Turn the ignition switch OFF.
8. Replace the MAP sensor (see **MAP SENSOR REPLACEMENT**).
9. Turn the ignition switch ON (II).
10. Reset the PCM with the HDS.
11. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
12. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
13. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Engine speed between 1,400-6,500 rpm
 - Transmission in D position

- Drive at a steady speed between 55-75 mph (88-120 km/h) for 10 seconds.
- During the drive, decelerate (with the throttle fully closed) for 2 seconds.

14. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1129 indicated?

YES - Check for poor connections or loose terminals at the MAP sensor and the PCM, then go to step 1.

NO - Go to step 15.

15. Monitor the OBD STATUS for DTC P1129 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 14, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the MAP sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 13.

DTC P1172: REAR A/F SENSOR (BANK 1, SENSOR 1) CIRCUIT OUT OF RANGE HIGH; DTC P1174: FRONT A/F SENSOR (BANK 2, SENSOR 1) CIRCUIT OUT OF RANGE HIGH

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Monitor the OBD STATUS for P1172 and/or P1174* in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 5.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.

5. Turn the ignition switch OFF.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

6. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
7. Turn the ignition switch ON (II).
8. Reset the PCM with the HDS.
9. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
10. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
11. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1172 and/or P1174 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 12.

12. Monitor the OBD STATUS for DTC P1172 and/or P1174* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 11, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates EXECUTING or OUT OF CONDITION, keep idling until a result comes on.

DTC P1297: ELD CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check the ELD in the DATA LIST with the HDS.

Is 72 A or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ELD and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the ELD 3P connector.

5. Turn the ignition switch ON (II).
6. Check the ELD in the DATA LIST with the HDS.

Is 72 A or more indicated?

YES - Go to step 7.

NO - Go to step 11.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Check for continuity between PCM connector terminal A10 and body ground.

Fig. 79: Identifying Continuity Between PCM Connector Terminal A10 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A10) and the ELD, then go to step 13.

NO - Go to step 20.

11. Turn the ignition switch OFF.
12. Replace the leftside engine compartment wire harness (see **LEFT ENGINE COMPARTMENT WIRE HARNESS**).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Start the engine.
18. Turn on the headlights.

19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1297 indicated?

YES - Check for poor connections or loose terminals at the ELD unit and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

20. Reconnect all connectors.
21. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
22. Start the engine.
23. Turn on the headlights.
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1297 indicated?

YES - Check for poor connections or loose terminals at the ELD unit and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 22. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1298: ELD CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch ON (II).
2. Check the ELD in the DATA LIST with the HDS.

Is 0.2 A or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the ELD and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the ELD 3P connector.

5. Turn the ignition switch ON (II).
6. Measure voltage between ELD 3P connector terminal No. 1 and body ground.

ELD 3P CONNECTOR

Wire side of female terminals

Fig. 80: Identifying Voltage Between ELD 3P Connector Terminal 1 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 7.

NO - Repair open in the wire between the No. 18 IG ACG (10 A) fuse in the under-dash fuse/relay box and the ELD, then go to step 13.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Check for continuity between PCM connector terminal A10 and ELD 3P connector terminal No. 3.

ELD 3P CONNECTOR

Fig. 81: Identifying Continuity Between PCM Connector Terminal A10 And ELD 3P Connector Terminal 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire between the PCM (A10) and the ELD, then go to step 13.

11. Check for continuity between ELD 3P connector terminal No. 2 and body ground.

ELD 3P CONNECTOR

Wire side of female terminals

Fig. 82: Identifying Continuity Between ELD 3P Connector Terminal 2 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the wire between the ELD and G302, then go to step 13.

12. Replace the left side engine compartment wire harness (see **LEFT ENGINE COMPARTMENT WIRE HARNESS**).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1298 indicated?

YES - Go to step 18.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

18. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1298 indicated?

YES - Check for poor connections or loose terminals at the ELD unit and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1549: CHARGING SYSTEM HIGH VOLTAGE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**
- **If a high voltage battery (24 V, etc.) is connected to the vehicle, this DTC can be stored.**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check under these conditions:
 - A/C switch off
 - Headlights off
 - Rear window defogger off
5. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1549 indicated?

YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), then go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator and the main under-hood fuse box.

7. Turn the ignition switch ON (II).
8. Reset the PCM with the HDS.
9. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
10. Start the engine.
11. Check under these conditions:
 - A/C switch off
 - Headlights off
 - Rear window defogger off

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

12. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1549 indicated?

YES - Check for poor connections or loose terminals at the alternator and the main under-hood fuse box, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P16BB: ALTERNATOR B TERMINAL CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check under these conditions:
 - A/C switch on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
5. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BB indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator and the main under-hood fuse box, and check the battery performance (see BATTERY TEST).

7. Check for poor connections or loose terminals at the alternator and the main under-hood fuse box (+B line).

Are the connections and terminals OK?

YES - Go to step 8.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Repair the connectors or terminals, then go to step 9.

8. Check for an open in the wire between the alternator and main under-hood fuse box at the starter subharness.

is the harness OK?

YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), then go to step 9.

NO - Repair open in the wire between the alternator and the main under-hood fuse box, then go to step 9.

9. Turn the ignition switch ON (II).
10. Reset the PCM with the HDS.
11. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
12. Start the engine.
13. Check under these conditions:
 - A/C switch on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
14. Hold the engine speed at 2,000 rpm (in Park or neutral) for 1 minute.
15. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BB indicated?

YES - Check for poor connections or loose terminals at the alternator and the main under-hood fuse box, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P16BC: ALTERNATOR FR TERMINAL CIRCUIT/ IGP CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Check for poor connections or loose terminals at the alternator 4P connector.

Are the connections and terminals OK?

YES - Go to step 2.

NO - Repair the connector or terminals, then go to step 18.

2. Check the alternator mounting surface for corrosion.

Is the mounting surface corroded?

YES - Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**). Clean all mounting surfaces, reinstall the alternator, then go to step 18.

NO - Go to step 3.

3. Turn the ignition switch ON (II).
4. Clear the DTC with the HDS.
5. Start the engine.
6. Check under these conditions:
 - A/C on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
7. Hold the engine speed 2,000 rpm (in Park or neutral) for 1 minute.
8. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Go to step 9.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the alternator.

9. Turn the ignition switch OFF.
10. Disconnect the alternator 4P connector.
11. Turn the ignition switch ON (II).
12. Measure voltage between alternator 4P connector terminal No. 1 and body ground.

ALTERNATOR 4P CONNECTOR

Wire side of female terminals

Fig. 83: Identifying Voltage Between Alternator 4P Connector Terminal 1 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 13.

NO - Repair open in the wire between the alternator (IG1 line) and the No. 18 ACG (10 A) fuse in the under-dash fuse/relay box, then go to step 18.

13. Measure voltage between alternator 4P connector terminal No. 4 and body ground.

ALTERNATOR 4P CONNECTOR

Wire side of female terminals

Fig. 84: Identifying Voltage Between Alternator 4P Connector Terminal 4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION), then go to step 18.

NO - Go to step 14.

14. Turn the ignition switch OFF.
15. Jump the SCS line with the HDS.
16. Disconnect PCM connector B (44P).

17. Check for continuity between alternator 4P connector terminal No. 4 and PCM connector terminal C44.

Fig. 85: Identifying Continuity Between Alternator 4P Connector Terminal 4 And PCM Connector Terminal C44

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (C44) and the alternator, then go to step 18.

18. Turn the ignition switch OFF.
19. Reconnect all connectors.
20. Turn the ignition switch ON (II).
21. Reset the PCM with the HDS.
22. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
23. Start the engine.
24. Check under these conditions:
 - A/C on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
25. Hold the engine speed 2,000 rpm (in Park or neutral) for 1 minute.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Check for poor connections or loose terminals at the alternator and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Start the engine.
30. Check under these conditions:
 - A/C on
 - Temperature control at maximum cool
 - Blower fan at maximum speed
 - Rear window defogger on
 - Headlights on high beam
31. Hold the engine speed 2,000 rpm (in Park or neutral) for 1 minute.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BC indicated?

YES - Check for poor connections or loose terminals at the alternator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 29. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P16BD: STARTER CUT RELAY 2 MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BD indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at starter cut relay 2 and the PCM.

4. Turn the ignition switch OFF.
5. Replace starter relay 2.
6. Turn the ignition switch ON (II).
7. Reset the PCM with the HDS.
8. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
9. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BD indicated?

YES - Check for poor connections or loose terminals at starter cut relay 2 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P16BE: STARTER CUT RELAY 1 MALFUNCTION

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BE indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at starter cut relay 1 and the PCM.

4. Turn the ignition switch OFF.
5. Replace starter relay 1 (ST CUT).
6. Turn the ignition switch ON (II).
7. Reset the PCM with the HDS.
8. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
9. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BE indicated?

YES - Check for poor connections or loose terminals at starter cut relay 1 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the

indicated DTCs troubleshooting.

DTC P16BF: STARTER CUT RELAY STRLY CIRCUIT MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BF indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at starter cut relay 1, starter cut relay 2, and the PCM.

4. Turn the ignition switch OFF.
5. Jump the SCS line with the HDS.
6. Remove starter cut relay 1 and starter cut relay 2.
7. Disconnect PCM connector A (49P).
8. Check for continuity between PCM connector terminal A3 and body ground.

Fig. 86: Identifying Continuity Between PCM Connector Terminal A3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A3) and starter cut relay 1 or starter cut relay 2, then go to step 9.

NO - Go to step 14.

9. Reconnect all connectors.
10. Turn the ignition switch ON (II).
11. Reset the PCM with the HDS.
12. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BF indicated?

YES - Check for poor connections or loose terminals at starter cut relay 1, starter cut relay 2, and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

14. Reconnect all connectors.
15. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P16BF indicated?

YES - Check for poor connections or loose terminals at starter cut relay 1, starter cut relay 2, and the PCM, then go to step 1. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2183: ECT SENSOR 2 RANGE/ PERFORMANCE PROBLEM

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- If DTC P0111 is stored at the same time as DTC P2183, troubleshoot DTC P0111 first, then recheck for DTC P2183.

1. Check for poor connections or loose terminals at ECT sensor 1 and ECT sensor 2.

Are the connections and terminals OK?

YES - Go to step 2.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Repair the connectors or terminals, then go to step 27.

2. Turn the ignition switch ON (II).
3. Check for Temporary DTCs or DTCs with the HDS.

Are DTC P1116 and P2183 indicated at the same time?

YES - Go to step 15.

NO - Go to step 4.

4. Start the engine, and let it idle for 10 minutes.
5. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about 131°F (55°C) or less, or 1.50 V or more indicated?

YES - Replace ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**), then go to step 27.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Drain the coolant (see **COOLANT CHECK**).
8. Remove ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**).
9. Allow ECT sensor 2 to cool to ambient temperature.
10. Note the ambient temperature.
11. Connect ECT sensor 2 to its 2P connector, but do not install it on the engine.
12. Turn the ignition switch ON (II).
13. Note the value of ECT SENSOR 2 quickly in the DATA LIST with the HDS.
14. Compare the value of ECT SENSOR 2 and the ambient temperature.

Does ECT SENSOR 2 differ 5.4°F (3°C) or more?

YES - Replace ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**), then go to step 27.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM.

15. Start the engine, and let it idle for 10 minutes.
16. Check ECT SENSOR 1 in the DATA LIST with the HDS.

Is about 118°F (48°C) or less, or 1.75 V or more indicated?

YES - Replace ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), then go to step 27.

NO - Go to step 17.

17. Let the engine idle for 10 minutes.
18. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about 131°F (55°C) or less, or 1.50 V or more indicated?

YES - Replace ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**), then go to step 27.

NO - Go to step 19.

19. Turn the ignition switch OFF.
20. Drain the coolant (see **COOLANT CHECK**).
21. Remove ECT sensor 1 (see **ECT SENSOR 1 REPLACEMENT**), and ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**).
22. Allow the sensors to cool to ambient temperature.
23. Note the ambient temperature.
24. Connect ECT sensor 1 to its 2P connector, and ECT sensor 2 to its 2P connector, but do not install them on the engine.
25. Note the value of ECT SENSOR 1 and ECT SENSOR 2 quickly in the DATA LIST with the HDS.
26. Compare the value of ECT SENSOR 1 and the ambient temperature, and the value of ECT SENSOR 2 and the ambient temperature individually.

Does one of the sensor differ more than 5.4°F (3°C) from the ambient temperature?

YES - Replace the sensor that differed more than 5.4°F (3°C) from the ambient temperature, then go to step 27.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, then reconnect all connectors, and refill the cooling system (see **COOLANT CHECK**).

27. Turn the ignition switch ON (II).
28. Reset the PCM with the HDS.
29. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2183 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 1, ECT sensor 2, and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2184: ECT SENSOR 2 CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about 356°F (180°C) or more, or 0.08 V or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the ECT sensor 2 2P connector.
5. Turn the ignition switch ON (II).
6. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about 356°F (180°C) or more, or 0.08 V or less indicated?

YES - Go to step 7.

NO - Go to step 11.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Check for continuity between ECT sensor 2 2P connector terminal No. 1 and body ground.

ECT SENSOR 2 2P CONNECTOR

Wire side of female terminals

Fig. 87: Identifying Continuity Between ECT Sensor 2P Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between ECT sensor 2 and the PCM (A21), then go to step 13.

NO - Go to step 18.

11. Turn the ignition switch OFF.
12. Replace ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2184 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 2 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

18. Reconnect all connectors.
19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2184 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 2 and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2185: ECT SENSOR 2 CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about -40°F (-40°C) or less, or 4.92 V or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at ECT sensor 2 and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the ECT sensor 2 2P connector.
5. Connect ECT sensor 2 2P connector terminals No. 1 and No. 2 with a jumper wire.

ECT SENSOR 2 2P CONNECTOR

Wire side of female terminals

Fig. 88: Identifying ECT Sensor 2P Connector Terminals 1 And 2 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the ignition switch ON (II).
7. Check ECT SENSOR 2 in the DATA LIST with the HDS.

Is about -40°F (-40°C) or less, or 4.92 V or more indicated?

YES - Go to step 8.

NO - Go to step 20.

8. Turn the ignition switch OFF.
9. Remove the jumper wire from the ECT sensor 2 2P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between ECT sensor 2 2P connector terminal No. 1 and body ground.

ECT SENSOR 2 2P CONNECTOR

Wire side of female terminals

Fig. 89: Identifying Voltage Between ECT Sensor 2P Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 12.

NO - Go to step 16.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector A (49P).
15. Check for continuity between PCM connector terminal A27 and ECT sensor 2 2P connector terminal No. 2.

ECT SENSOR 2 2P CONNECTOR

Terminal side of female terminals

Fig. 90: Identifying Continuity Between PCM Connector Terminal A27 And ECT Sensor 2P Connector Terminal 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (A27) and ECT sensor 2, then go to step 22.

16. Turn the ignition switch OFF.
17. Jump the SCS line with the HDS.
18. Disconnect PCM connector A (49P).
19. Check for continuity between PCM connector terminal A21 and ECT sensor 2 2P connector terminal No. 1.

Fig. 91: Identifying Continuity Between PCM Connector Terminal A21 And ECT Sensor 2P Connector Terminal 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (A21) and ECT sensor 2, then go to step 22.

20. Turn the ignition switch OFF.
21. Replace ECT sensor 2 (see **ECT SENSOR 2 REPLACEMENT**).
22. Reconnect all connectors.
23. Turn the ignition switch ON (II).
24. Reset the PCM with the HDS.
25. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2185 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 2 and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2185 indicated?

YES - Check for poor connections or loose terminals at ECT sensor 2 and the PCM. If the PCM was updated/substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PGM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2195: REAR A/F SENSOR (BANK 1, SENSOR 1) SIGNAL STUCK LEAN; DTC P2197: FRONT A/F SENSOR (BANK 2, SENSOR 1) SIGNAL STUCK LEAN

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Information marked with an asterisk (*) applies to the front bank (Bank 2).
- If the vehicle was out of fuel and the engine stalled before this DTC was stored, refuel, and clear the DTC with the HDS.
- If DTC P2101, P2118, P2135, P2138, P2176, or a combination of P2122 and P2127, P2122 and P2138 or P2127 and P2138 is stored at the same time as DTC P2195 (P2197)*, troubleshoot those DTCs first, then recheck for DTC P2195 (P2197)*.

1. Check the installation of the A/F sensor (Sensor 1).

Is the A/F sensor loose or disconnected from the exhaust pipe?

YES - Go to step 6.

NO - Go to step 2.

2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Start the engine, then let it idle.
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2195 and/or P2197 indicated?*

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 13.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If any other Temporary DTCs or DTCs are indicated, go to .

6. Turn the ignition switch OFF.
7. Reinstall the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
8. Turn the ignition switch ON (II).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
11. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2195 and/or P2197 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 12.

12. Monitor the OBD STATUS for DTC P2195 and/or P2197* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 11, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

13. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
14. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
15. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2195 and/or P2197 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 14. If the PCM was substituted, go to step 1.

NO - Go to step 16.

16. Monitor the OBD STATUS for DTC P2195 and/or P2197* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 15, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2227: BARO SENSOR RANGE/ PERFORMANCE PROBLEM

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- If DTC P0107, P0108, P1128, and/or P1129 are stored at the same time as DTC P2227, troubleshoot those DTCs first, then recheck for DTC P2227.

1. Turn the ignition switch ON (II), and wait 2 seconds.
2. Check the BARO SENSOR in the DATA LIST with the HDS.

Is about 101 kPa (29.9 in.Hg, 760 mmHg), or about 2.9 V at sea level indicated?

YES - Go to step 3.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

3. Clear the DTC with the HDS.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Throttle position between 17 degrees and 33 degrees for 3 seconds
6. Monitor the OBD STATUS for DTC P2227 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Intermittent failure, the system is OK at this time.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - If the screen indicates FAILED, go to step 7. If the screen indicates NOT COMPLETED, go to step 5.

7. Check the condition of the air cleaner element.

Is the air cleaner element OK?

YES - Go to step 8.

NO - Replace the air cleaner element (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**).

8. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Throttle position between 17 degrees and 33 degrees for 3 seconds
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2227 indicated?

YES - If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 11. If the PCM was substituted, go to step 1.

NO - Go to step 14.

14. Monitor the OBD STATUS for DTC P2227 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM IDLE LEARN PROCEDURE**). If any other Temporary DTCs or DTCs were indicated in step 13, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 11. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 11.

DTC P2228: BARO SENSOR CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

Is about 43 kPa (12.7 in.Hg, 323 mmHg), or 1.31 V or less indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time.

3. Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM).
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2228 indicated?

YES - Check for poor connections or loose terminals at the PCM. If the PCM was updated, substitute a known-good PCM (see SUBSTITUTING THE PCM), then recheck. If the PCM was substituted in step 3, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see PCM REPLACEMENT). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2229: BARO SENSOR CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Check the BARO SENSOR in the DATA LIST with the HDS.

Is about 160 kPa (47.2 in.Hg, 1,200 mmHg), or 4.49 V, or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time.

3. Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM).
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2229 indicated?

YES - Check for poor connections or loose terminals at the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted in step 3, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2237: REAR A/F SENSOR (BANK 1, SENSOR 1) IP CIRCUIT HIGH VOLTAGE; DTC P2240: FRONT A/F SENSOR (BANK 2, SENSOR 1) IP CIRCUIT HIGH VOLTAGE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2237 and/or P2240 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between A/F sensor (Sensor 1) 6P connector terminal No. 5 to and PCM connector terminal B31 (B32)*.

Fig. 92: Identifying Continuity Between A/F Sensor Connector Terminal 5 And PCM Connector Terminal B31

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the PCM (B31 (B32)*) and the A/F sensor (Sensor 1), then go to step 14.

10. Reconnect PCM connector B (49P).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 5 and body ground.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Wire side of female terminals

Fig. 93: Identifying Voltage Between A/F Sensor 6P Connector Terminal 5 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.2 V or less?

YES - Go to step 20.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Go to step 13.

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2237 and/or P2240 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P2237 and/or P2240* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2237 and/or P2240 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P2237 and/or P2240* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2238: REAR A/F SENSOR (BANK 1, SENSOR DIP CIRCUIT LOW VOLTAGE; DTC P2241: FRONT A/F SENSOR (BANK 2, SENSOR 1) IP CIRCUIT LOW VOLTAGE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2238 and/or P2241 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between PCM connector terminal B31 (B32)* and body ground.

Fig. 94: Identifying Continuity Between PCM Connector Terminal B31 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B31 (B32)*) and the A/F sensor (Sensor 1), then go to step 14.

NO - Go to step 10.

10. Reconnect PCM connector B (49P).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 5 and body ground.

Is there about 0.2 V or less?

YES - Go to step 20.

NO - Go to step 13.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2238 and/or P2241 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P2238 and/or P2241* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1, If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2238 and/or P2241 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P2238 and/or P2241* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2243: REAR A/F SENSOR (BANK 1, SENSOR 1) VCENT CIRCUIT HIGH VOLTAGE; DTC P2247: FRONT A/F SENSOR (BANK 2, SENSOR 1) VCENT CIRCUIT HIGH VOLTAGE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2243 and/or P2247 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between A/F sensor (Sensor 1) 8P connector terminal No. 6 and PCM connector terminal B15 (B24)*.

Fig. 96: Identifying Continuity Between A/F Sensor Connector Terminal 6 And PCM Connector Terminal B15

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the PCM (B15 (B24)*) and the A/F sensor (Sensor 1), then go to step 14.

10. Reconnect PCM connector B (49P).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 6 and body ground.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.2 V or less?

YES - Go to step 20.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Go to step 13.

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2243 and/or P2247 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P2243 and/or P2247* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2243 and/or P2247 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P2243 and/or P2247* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2245: REAR A/F SENSOR (BANK 1, SENSOR 1) VCENT CIRCUIT LOW VOLTAGE; DTC P2249: FRONT A/F SENSOR (BANK 2, SENSOR 1) VCENT CIRCUIT LOW VOLTAGE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2245 and/or P2249 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between PCM connector terminal B15(B24)* and body ground.

Fig. 98: Identifying Continuity Between PCM Connector Terminal B15 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B15 (B24)*) and the A/F sensor (Sensor 1), then go to step 14.

NO - Go to step 10.

10. Reconnect PCM connector B (49P).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 6 and body ground.

Is there about 0.2 V or less?

YES - Go to step 20.

NO - Go to step 13.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2245 and/or P2249 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P2245 and/or P2249* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2245 and/or P2249 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P2245 and/or P2249* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the

original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2251: REAR A/F SENSOR (BANK 1, SENSOR 1) VS CIRCUIT HIGH VOLTAGE; DTC P2254: FRONT A/F SENSOR (BANK 2, SENSOR 1) VS CIRCUIT HIGH VOLTAGE

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If DTC P2251 and/or P2254* is stored at the same time as DTC P0134 and/or P0154*, troubleshoot DTC P2251 and/or P2254* first, then recheck for P0134 and/or P0154*.**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2251 and/or P2254 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between A/F sensor (Sensor 1) 6P connector terminal No. 4 and PCM connector terminal B13(B14)*.

Fig. 100: Identifying Continuity Between A/F Sensor Connector Terminal 4 And PCM Connector Terminal B13

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the PCM (B13 (B14)*) and the A/F sensor (Sensor 1), then go to step 14.

10. Reconnect PCM connector B (49P).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 4 and body ground.

A/F SENSOR (SENSOR 1) 6P CONNECTOR

Is there about 0.2 V or less?

YES - Go to step 20.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO - Go to step 13.

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2251 and/or P2254 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P2251 and/or P2254* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

If DTC P2251 and/or P2254 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P2251 and/or P2254* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2252: REAR A/F SENSOR (BANK 1, SENSOR 1) VS CIRCUIT LOW VOLTAGE; DTC P2255: FRONT A/F SENSOR (BANK 2, SENSOR 1) VS CIRCUIT LOW VOLTAGE

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2252 and/or P2255 indicated?*

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM.

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Disconnect the A/F sensor (Sensor 1) 6P connector.
8. Disconnect PCM connector B (49P).
9. Check for continuity between PCM connector terminal B13(B14)* and body ground.

Fig. 102: Identifying Continuity Between PCM Connector Terminal B13 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B13 (B14)*) and the A/F sensor (Sensor 1), then go to step 14.

NO - Go to step 10.

10. Reconnect PCM connector B (49P).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 2 minutes.
12. Measure voltage between A/F sensor (Sensor 1) 6P connector terminal No. 4 and body ground.

Is there about 0.2 V or less?

YES - Go to step 20.

NO - Go to step 13.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

13. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2252 and/or P2255 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 19.

19. Monitor the OBD STATUS for DTC P2252 and/or P2255* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 18, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

20. Turn the ignition switch OFF.
21. Reconnect all connectors.
22. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2252 and/or P2255 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 24.

24. Monitor the OBD STATUS for DTC P2252 and/or P2255* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace, the

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 23, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

**DTC P2270: REAR SECONDARY HO2S (BANK 1, SENSOR 2) CIRCUIT SIGNAL STUCK LEAN;
DTC P2271: REAR SECONDARY HO2S (BANK 1, SENSOR 2) CIRCUIT SIGNAL STUCK RICH;
DTC P2272: FRONT SECONDARY HO2S (BANK 2, SENSOR 2) CIRCUIT SIGNAL STUCK LEAN;
DTC P2273: FRONT SECONDARY HO2S (BANK 2, SENSOR 2) CIRCUIT SIGNAL STUCK RICH**

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Information marked with an asterisk (*) applies to the front bank (Bank 2).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Vehicle speed between 35-55 mph (56-88 km/h)
 - Drive 1 minute or more
5. Monitor the OBD STATUS for DTC P2270, P2271, P2272*, and/or P2273* in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 6.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM. If the screen indicates EXECUTING, keep driving until a result comes on. (f the screen indicates OUT OF CONDITION, go to step 3 and recheck.

6. Turn the ignition switch OFF.
7. Replace the secondary HO2S (Sensor 2) (see **SECONDARY HO2S REPLACEMENT**).
8. Turn the ignition switch ON (II).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
12. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Vehicle speed between 35-55 mph (56-88 km/h)
 - Drive 1 minute or more
13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2270, P2271, P2272, and/or P2273* indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1.

NO - Go to step 14.

14. Monitor the OBD STATUS for DTC P2270, P2271, P2272*, and/or P2273* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 13, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 12.

DTC P2610: PCM INTERNAL POWER OFF TIMER PERFORMANCE PROBLEM

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2610 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

4. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2610 indicated?

YES - If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2A00: REAR A/F SENSOR (BANK 1, SENSOR 1) RANGE/PERFORMANCE PROBLEM; DTC P2A03: FRONT A/F SENSOR (BANK 2, SENSOR 1) RANGE/PERFORMANCE PROBLEM

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Vehicle speed between 25-55 mph (40-88 km/h) for 5 minutes.
 - Drive at a steady speed between 55-75 mph (88-120 km/h) for 10 seconds, then decelerate (with the throttle fully closed) for at least 6 seconds.
5. Monitor the OBD STATUS for DTC P2A00 and/or P2A03* in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 6.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM. If it is EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 3 and recheck.

6. Turn the ignition switch OFF.
7. Replace the A/F sensor (Sensor 1) (see **A/F SENSOR REPLACEMENT**).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

8. Turn the ignition switch ON (II).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
11. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Vehicle speed between 25-55 mph (40- 88 km/h) for 5 minutes.
 - Drive at a steady speed between 55-75 mph (88-120 km/h) for 10 seconds, then decelerate (with the throttle fully closed) for at least 6 seconds.
12. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2A00 and/or P2A03 indicated?*

YES - Check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1.

NO - Go to step 13.

13. Monitor the OBD STATUS for DTC P2A00 and/or P2A03* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 12, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the A/F sensor (Sensor 1) and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 11.

DTC U0028: F-CAN MALFUNCTION (BUS-OFF (PCM))

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0028 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0028 indicated?

YES - If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC U0114: F-CAN MALFUNCTION (PCM-SH-AWD CONTROL UNIT)

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**
- **If DTC U0028 is stored at the same time as DTC U0114, troubleshoot DTC U0028 first, then recheck for DTC U0114.**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs in the DTCs MENU with the HDS.

Is DTC U0114 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module, the SH-AWD control unit, and the PCM.

4. Check for DTCs in the DTCs MENU with the HDS.

Is SH-AWD system DTC 41 indicated?

YES - Go to step 5.

NO - Go to step 8.

5. Turn the ignition switch OFF.
6. Disconnect the SH-AWD control unit 20P connector.
7. Check for continuity between SH-AWD control unit 20P connector terminals No. 10 and No. 20*.

SH-AWD CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 104: Identifying Continuity Between SH-AWD Control Unit 20P Connector Terminals 10 And 20

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**), then go to step 15 and recheck. If DTC U0114 is not indicated, replace the original SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**), then go to step 15.

NO - Repair open in the wire between the SH-AWD control unit (No. 10 (No. 20)*) and the PCM (A48 (A49)*), then go to step 15.

*: CANL line

8. Check for a poor connections at the SH-AWD control unit 20P connector and 8P connector.

Are the connections OK?

YES - Go to step 9.

NO - Repair the connections, then go to step 15.

9. Turn the ignition switch OFF.
10. Disconnect the SH-AWD control unit 20P connector.
11. Turn the ignition switch ON (II).
12. Measure voltage between SH-AWD control unit 20P connector terminal No. 7 and body ground.

SH-AWD CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 105: Identifying Voltage Between SH-AWD Control Unit 20P Connector Terminal 7 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 13.

NO - Check the No. 20 SVTM-4, ARC, ODS (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the wire between the No. 20 STVM-4, ARC, ODS (7.5 A) fuse and the SH-AWD control unit, then go to step 15.

13. Turn the ignition switch OFF.
14. Check for continuity between SH-AWD control unit 20P connector terminals No. 9 and body ground, and between SH-AWD control unit 8P connector terminal No. 2 and No. 3 and body ground individually.

SH-AWD CONTROL UNIT 8P CONNECTOR

Wire side of female terminals

Fig. 106: Identifying Continuity Between SH-AWD Control Unit 8P Connector Terminal 2 And 3 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SH-AWD CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 107: Identifying Continuity Between SH-AWD Control Unit 20P Connector Terminals 9 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**), then go to step 15 and recheck. If DTC U0114 is not indicated, replace the original SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**), then go to step 15.

NO - Repair open in the wire between the SH-AWD control unit and body ground (G603), then go to step 15.

15. Reconnect all connectors.
16. Turn the ignition switch ON (II).
17. Reset the PCM with the HDS.
18. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
19. Check for Temporary DTCs or DTCs in the DTCs MENU with the HDS.

Is DTC U0114 indicated?

YES - Check for poor connections or loose terminals at the gauge control module, the SH-AWD control unit, and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs indicated, go to the indicated DTCs troubleshooting.

DTC U0122: F-CAN MALFUNCTION (PCM-VSA MODULATOR-CONTROL UNIT)

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check for Temporary DTCs or DTCs with the HDS.

Are DTC U0028 and U0122 indicated at the same time?

YES - Go to troubleshooting for DTC U0028.

NO - Go to step 3.

3. Clear the DTC with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0122 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module, the VSA modulator-control unit, and the PCM.

5. Check for communication to the VSA system with the HDS.

Does the HDS communicate with the VSA modulator-control unit?

YES - Go to step 6.

NO - Go to the **DLC circuit troubleshooting** .

6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect the VSA modulator-control unit 46P connector.
9. Disconnect PCM connector A (44P).
10. Check for continuity between PCM connector terminal A48 and VSA modulator-control unit 46P connector terminal No. 39.

Fig. 108: Identifying Continuity Between PCM Connector Terminal A48 And VSA Modulator-

Control Unit Connector Terminal 39

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Go to step 11.**NO** - Repair open in the wire between the PCM (A48) and the VSA modulator-control unit, then go to step 12.

11. Check for continuity between PCM connector terminal A49 and VSA modulator-control unit 46P connector terminal No. 38.

Fig. 109: Identifying Continuity Between PCM Connector Terminal A49 And VSA Modulator-Control Unit Connector Terminal 38

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), then go to step 12 and recheck. If DTC U0122 is not indicated, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), then go to step 12.

NO - Repair open in the wire between the PCM (A49) and the VSA modulator-control unit, then go to step 12.

12. Reconnect all connectors.
13. Turn the ignition switch ON (II).
14. Reset the PCM with the HDS.
15. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0122 indicated?

YES - Check for poor connections or loose terminals at the gauge control module, the VSA modulator unit, and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC U0155: F-CAN MALFUNCTION (PCM-GAUGE CONTROL MODULE)

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0155 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the PCM.

4. Check for body electrical DTCs in the DTCs MENU with the HDS.

Is DTC B1168, B1169, and/or B1178 indicated?

YES - Go to step 5.

NO - Do the gauge control module input test (see GAUGE CONTROL MODULE INPUT TEST).

5. Turn the ignition switch OFF.
6. Jump the SCS line with the HDS.
7. Remove the gauge control module (see GAUGE CONTROL MODULE REPLACEMENT).
8. Disconnect gauge control module connector A (12P).
9. Disconnect PCM connector A (49P).
10. Connect gauge control module connector terminal A12 to body ground with a jumper wire.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 110: Identifying Gauge Control Module Connector Terminal A12 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between PCM connector terminal A48 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 111: Identifying Continuity Between PCM Connector Terminal A48 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the wire between the PCM (A48) and the gauge control module, then go to step 14.

12. Connect gauge control module connector terminal A6 to body ground with a jumper wire.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Fig. 112: Identifying Gauge Control Module Connector Terminal A6 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check for continuity between PCM connector terminal A49 and body ground.

PCM CONNECTOR A (49P)

Fig. 113: Identifying Continuity Between PCM Connector Terminal A49 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), then go to step Hand recheck. If DTC U0155 is not indicated, replace the original gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), then go to step 14.

NO - Repair open in the wire between the PCM (A49) and the gauge control module, then go to step 14.

14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0155 indicated?

YES - Check for poor connections or loose terminals at the gauge control module and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC U0300: PGM-FI SYSTEM AND A/T SYSTEM PROGRAM VERSION MISMATCH

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Do not turn the ignition switch OFF while updating the PCM. If you turn the ignition switch OFF before completion, the PCM will be damaged.**

1. Do the PCM update procedure {PGM-FI system} (see PCM UPDATE).
2. Do the PCM update procedure (A/T system) (see SUBSTITUTE THE PCM).
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC U0300 indicated?

YES - Replace the original PCM (see PCM REPLACEMENT).

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

F-CAN CIRCUIT TROUBLESHOOTING (PART 1)

NOTE: Information marked with an asterisk (*) applies to the CANL line.

1. Turn the ignition switch OFF.
2. Jump the SCS line with the HDS.
3. Disconnect PCM connector A (49P), then disconnect the HDS.
4. Measure resistance between PCM connector terminals A48 and A49.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 114: Identifying Resistance Between PCM Connector Terminals A48 And A49*
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 333-408 ohms?

YES - Go to **F-CAN CIRCUIT TROUBLESHOOTING (PART 2)**

NO - Go to step 5.

5. Disconnect gauge control module connector A (12P) (see **GAUGE CONTROL MODULE REPLACEMENT**).
6. Disconnect the VSA modulator-control unit 46P connector (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
7. Disconnect SRS unit connector A (28P) (see **SRS UNIT REPLACEMENT**).
8. Disconnect the TPMS unit 20P connector (see **TPMS CONTROL UNIT REPLACEMENT**).
9. Disconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector (see **YAW RATE-LATERAL/LONGITUDINAL ACCELERATION SENSOR REPLACEMENT**).
10. Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).
11. Disconnect the SH-AWD control unit 20P connector (see **SH-AWD CONTROL UNIT REPLACEMENT**).
12. With active damper system: Disconnect the active damper control unit 14P connector (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**).
13. With AcuraLink: Disconnect AcuraLink control unit (XM receiver) connector A (20P) (see **ACURALINK CONTROL UNIT (XM RECEIVER) REMOVAL/INSTALLATION**).
14. Check for continuity between PCM connector terminals A48 and A49*.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Terminal side of female terminals

Fig. 115: Identifying Continuity Between PCM Connector Terminals A48 And A49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between PCM connector terminals A48 and A49*.

NO - Go to step 15.

15. Connect PCM connector terminal A48 to body ground with a jumper wire.

Terminal side of female terminals

Fig. 116: Identifying PCM Connector Terminal A48 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check for continuity between gauge control module connector terminal A12 and body ground.

GAUGE CONTROL MODULE CONNECTOR A (12P)

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 117: Identifying Continuity Between Gauge Control Module Connector Terminal A12 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 17.

NO - Repair open in the wire between the PCM (A48) and the gauge control module.

17. Check for continuity between VSA modulator-control unit 46P connector terminal No. 39 and body ground.

VSA MODULATOR-CONTROL UNIT 46P CONNECTOR

Wire side of female terminals

Fig. 118: Identifying Continuity Between VSA Modulator-Control Unit 46P Connector Terminal 39 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair open in the wire between the PCM (A48) and the VSA modulator-control unit.

18. Check for continuity between SH-AWD control unit 20P connector terminal No. 10 and body ground.

SH-AWD CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 119: Identifying Continuity Between SH-AWD Control Unit 20P Connector Terminal 10 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair open in the wire between the PCM (A48) and the SH-AWD control unit.

19. Remove the jumper wire from PCM connector A (49P).
20. Connect PCM connector terminal A49 to body ground with a jumper wire.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 120: Identifying PCM Connector Terminal A49 To Body Ground With Jumper Wire

21. Check for continuity between gauge control module connector terminal A6 and body ground.

GAUGE CONTROL MODULE CONNECTOR A (12P) CANL (RED)

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 121: Identifying Continuity Between Gauge Control Module Connector Terminal A6 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 22.

NO - Repair open in the wire between the PCM (A49) and the gauge control module.

22. Check for continuity between VSA modulator-control unit 46P connector terminal No. 38 and body ground.

VSA MODULATOR-CONTROL UNIT 46P CONNECTOR

Wire side of female terminals

Fig. 122: Identifying Continuity Between VSA Modulator-Control Unit 46P Connector Terminal 38 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 23.

NO - Repair open in the wire between the PCM (A49) and the VSA modulator-control unit.

23. Check for continuity between SH-AWD control unit 20P connector terminal No. 20 and body ground.

SH-AWD CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 123: Identifying Continuity Between SH-AWD Control Unit 20P Connector Terminal 20 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 24.

NO - Repair open in the wire between the PCM (A49) and the SH-AWD control unit.

24. Reconnect the gauge control module 12P connector.
25. Measure resistance between PCM connector terminals A48 and A49.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 124: Identifying Resistance Between PCM Connector Terminals A48 And A49

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Go to step 26.

NO - Substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**). If the HDS identifies the vehicle, replace the original gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

26. Disconnect gauge control module connector A (12P).

27. Reconnect the VSA modulator-control unit 46P connector.
28. Measure resistance between PCM connector terminals A48 and A49.

Terminal side of female terminals

Fig. 125: Identifying Resistance Between PCM Connector Terminals A48 And A49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Go to step 29.

NO - Substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**). If the HDS identifies the vehicle, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

29. Disconnect the VSA modulator-control unit 46P connector.
30. Reconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector.
31. Measure resistance between PCM connector terminals A48 and A49.

Terminal side of female terminals

Fig. 126: Identifying Resistance Between PCM Connector Terminals A48 And A49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Go to step 32.

NO - Substitute a known-good yaw rate-lateral/ longitudinal acceleration sensor (see **STEERING ANGLE SENSOR CENTER POINT WRITING**). If the HDS identifies the vehicle, replace the original yaw rate-lateral/longitudinal acceleration sensor (see **STEERING ANGLE SENSOR CENTER POINT WRITING**).

32. Disconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector.
33. Reconnect the steering angle sensor 5P connector.
34. Measure resistance between PCM connector terminals A48 and A49.

Terminal side of female terminals

Fig. 127: Identifying Resistance Between PCM Connector Terminals A48 And A49
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Go to step 35.

NO - Substitute a known-good steering angle sensor (see **STEERING ANGLE SENSOR CENTER POINT WRITING**). If the HDS identifies the vehicle, replace the original steering angle sensor (see **STEERING ANGLE SENSOR CENTER POINT WRITING**).

35. Disconnect the steering angle sensor 5P connector.
36. Reconnect SRS unit connector A (28P).
37. Measure resistance between PCM connector terminals A48 and A49.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 128: Identifying Resistance Between PCM Connector Terminals A48 And A49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Go to step 38.

NO - Substitute a known-good SRS unit (see SRS UNIT REPLACEMENT). If the HDS identifies the vehicle, replace the original SRS unit (see SRS UNIT REPLACEMENT).

38. Disconnect SRS unit connector A (28P).
39. Reconnect the TPMS control unit 20P connector.
40. Measure resistance between PCM connector terminals A48 and A49.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 129: Identifying Resistance Between PCM Connector Terminals A48 And A49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES -

- With active damper system: Go to step 41.
- Without active damper system: Go to step 44.

NO - Substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**). If the HDS identifies the vehicle, replace the original TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).

41. Disconnect the TPMS control unit 20P connector.
42. Reconnect the active damper control unit 14P connector.
43. Measure resistance between PCM connector terminals A48 and A49.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 130: Identifying Resistance Between PCM Connector Terminals A48 And A49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Go to step 44.

NO - Substitute a known-good active damper control unit (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**). If the HDS identifies the vehicle, replace the original active damper control unit (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**).

44. Disconnect the TPMS control unit 20P connector or the active damper control unit 14P connector.
45. Reconnect SH-AWD control unit 20P connector.
46. Measure resistance between PGM connector terminals A48 and A49.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 131: Identifying Resistance Between PGM Connector Terminals A48 And A49
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES -

- With: AcuraLink: Go to step 47.
- Without: AcuraLink: Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

NO - Substitute a known-good SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**). If the HDS identifies the vehicle, replace the original SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**).

47. Disconnect the SH-AWD control unit 20P connector.
48. Reconnect AcuraLink control unit (XM receiver) connector A (20P).
49. Measure resistance between PCM connector terminals A48 and A49.

Terminal side of female terminals

Fig. 132: Identifying Resistance Between PCM Connector Terminals A48 And A49
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.34-2.86 kohms?

YES - Update the PCM if it does not have the latest software (see), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

NO - Substitute a known-good AcuraLink control unit (XM receiver) (see **ACURALINK CONTROL UNIT (XM RECEIVER) REMOVAL/INSTALLATION**). If the HDS identifies the vehicle, replace the original AcuraLink control unit (XM receiver) (see **ACURALINK CONTROL UNIT (XM RECEIVER) REMOVAL/INSTALLATION**).

F-CAN CIRCUIT TROUBLESHOOTING (PART 2)

1. Disconnect gauge control module connector A (12P) (see **GAUGE CONTROL MODULE REPLACEMENT**).
2. Disconnect the VSA modulator-control unit 25P connector (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
3. Disconnect SRS unit connector A (28P) (see **SRS UNIT REPLACEMENT**).
4. Disconnect TPMS control unit connector A (20P) (see **TPMS CONTROL UNIT REPLACEMENT**).
5. Disconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector (see **YAW RATE-LATERAL/LONGITUDINAL ACCELERATION SENSOR REPLACEMENT**).
6. Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).
7. Disconnect SH-AWD control unit connector A (20P) (see **SH-AWD CONTROL UNIT REPLACEMENT**).
8. With active damper system: Disconnect the active damper control unit 14P connector (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**).
9. With AcuraLink: Disconnect AcuraLink control unit (XM receiver) connector A (20P) (see **ACURALINK CONTROL UNIT (XM RECEIVER) REMOVAL/INSTALLATION**).
10. Check for continuity between PCM connector terminal A48 and body ground.

Fig. 133: Identifying Continuity Between PCM Connector Terminal A48 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between PCM connector terminal A48 and the gauge control module, the VSA modulator-control unit, the SRS unit, the TPMS control unit, the yaw rate-lateral/ longitudinal acceleration sensor, the steering angle sensor, the SH-AWD control unit, the active damper control unit (with active damper system), the AcuraLink control unit (XM receiver (with AcuraLink)), or the DLC.

NO - Go to step 11.

11. Check for continuity between PCM connector terminal A49 and body ground.

Terminal side of female terminals

Fig. 134: Identifying Continuity Between PCM Connector Terminal A49 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between PCM connector terminal A49 and the gauge control module, the VSA modulator-control unit, the SRS unit, the TPMS control unit, the yaw rate-lateral/ longitudinal acceleration sensor, the steering angle sensor, the SH-AWD control unit, the active damper control unit (with active damper system), the AcuraLink control unit (XM receiver (with AcuraLink)), or the DLC.

NO - Go to step 12.

12. Reconnect all connectors.
13. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
14. Disconnect gauge control module connector A (12P).
15. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

NO - Go to step 16.

16. Turn the ignition switch OFF.
17. Reconnect gauge control module connector A (12P).
18. Disconnect the VSA modulator-control unit 46P connector.
19. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - Go to step 20.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

20. Turn the ignition switch OFF.
21. Reconnect the VSA modulator-control unit 46P connector.
22. Disconnect SRS unit connector A (28P).
23. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the SRS unit (see **SRS UNIT REPLACEMENT**).

NO - Go to step 24.

24. Turn the ignition switch OFF.
25. Reconnect SRS unit connector A (28P).
26. Disconnect TPMS control unit connector A (20P).
27. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).

NO - Go to step 28.

28. Turn the ignition switch OFF.
29. Reconnect TPMS control unit connector A (28P).
30. Disconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector.
31. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the yaw rate-lateral/longitudinal acceleration sensor (see **YAW RATE-LATERAL/LONGITUDINAL ACCELERATION SENSOR REPLACEMENT**).

NO - Go to step 32.

32. Turn the ignition switch OFF.
33. Reconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector.
34. Disconnect the steering angle sensor 5P connector.
35. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

NO -

- With active damper system: Go to step 36.
- Without active damper system: Go to step 40.

36. Turn the ignition switch OFF.
37. Reconnect the steering angle sensor 5P connector.
38. Disconnect the active damper control unit 14P connector.
39. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the active damper control unit (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**).

NO - Go to step 40.

40. Turn the ignition switch OFF.
41. Reconnect the steering angle sensor 5P connector or the active damper control unit 14P connector.
42. Disconnect SH-AWD control unit connector A (20P)
43. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**).

NO -

- With: AcuraLink: Go to step 44.
- Without: AcuraLink: Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

44. Turn the ignition switch OFF.
45. Reconnect the SH-AWD control unit 20P connector.
46. Disconnect AcuraLink control unit (XM receiver) connector A (20P).
47. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Replace the AcuraLink control unit (XM receiver).

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with

a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

MIL CIRCUIT TROUBLESHOOTING

1. Turn the ignition switch ON (II).
2. Do the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).

Does the MIL indicator flash?

YES - Go to step 3.

NO - Substitute a known-good gauge control module, and recheck. If the MIL circuit is OK, replace the original gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

3. Connect the HDS to the DLC (see **GENERAL TROUBLESHOOTING INFORMATION**).
4. Check the SCS in the DATA LIST with the HDS.

Is a short indicated?

YES - Go to step 5.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

5. Turn the ignition switch OFF.
6. Disconnect PCM connector A (49P), then disconnect the HDS.
7. Check for continuity between PCM connector terminal A32 and body ground.

Terminal side of female terminals

Fig. 135: Identifying Continuity Between PCM Connector Terminal A32 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A32) and the SRS unit, the DLC.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

DLC CIRCUIT TROUBLESHOOTING

NOTE: **Make sure the HDS and the DLC cable of the HDS is normal.**

1. Turn the ignition switch OFF.
2. Connect the HDS to the DLC (see **GENERAL TROUBLESHOOTING INFORMATION**).

NOTE: **Make sure the HDS is properly connected to the DLC.**

3. Turn the ignition switch ON (II), and read the HDS.

Does the HDS identify the vehicle?

YES - Go to step 4.

NO - Go to step 25.

4. Check for Temporary DTCs or DTCs in the PGM-FI system with the HDS.

Are any Temporary DTCs or DTCs indicated?

YES - Go to the indicated DTCs troubleshooting.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II), and watch the SRS indicator.

Does the SRS indicator stay on?

YES - Go to the SRS system's general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Turn the ignition switch ON (II), and watch the VSA indicator.

Does the VSA indicator stay on?

YES - Go to the VSA system's general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Turn the ignition switch ON (II), and watch the immobilizer indicator.

Does the immobilizer indicator stay on or flash?

YES - Go to the immobilizer system's troubleshooting (see **SYMPTOM TROUBLESHOOTING INFORMATION**).

NO - Go to step 11.

11. Turn the ignition switch OFF.
12. Turn the ignition switch ON (II), and watch the SH-AWD indicator.

Does the SH-AWD indicator stay on?

YES - Go to the SH-AWD system's general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

NO - Go to step 13.

13. Turn the ignition switch OFF.
14. Turn the ignition switch ON (II), and watch the multi-information display.

Does the TPMS indicator stay on?

YES - Go to the TPMS system's general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

NO -

- With active damper system: Go to step 15.
- Without active damper system: Go to step 17.

15. Turn the ignition switch OFF.
16. Turn the ignition switch ON (II), and watch the active damper system indicator.

Does the active damper system indicator stay on?

YES - Go to the active damper system's general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

NO - Go to step 17.

17. Do the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**) to make sure the gauge is known-good. If the function test is OK, go to step 18.
18. Check for B-CAN system DTCs without the HDS (see **WITHOUT HDS (USE ONLY IF THE HDS IS UNAVAILABLE)**).

Are any B-CAN DTCs indicated?

YES - Go to the indicated DTCs troubleshooting.

NO - Go to step 19.

19. Turn the ignition switch OFF.
20. Disconnect the HDS from the DLC.
21. Check for continuity between DLC terminal No. 7 and body ground.

Fig. 136: Identifying Continuity Between DLC Terminal 7 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 5 ohms or less?

YES - Go to step 22.

NO - Go to step 23.

22. Continue to check for continuity between DLC terminal No. 7 and body ground, while disconnecting these parts, one at a time:
 - SRS unit connector A (28P)
 - VSA modulator-control unit 46P connector
 - Immobilizer-keyless control unit 7P connector
 - Audio unit 17P connector
 - SH-AWD control unit 20P connector
 - Active damper control unit 14P connector

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

- TPMS control unit 20P connector
- MICU connector P (30P)

Does continuity go away when one of the above components is disconnected?

YES - Replace the part that caused an open when it was disconnected.

NO - Repair short in the wire between the DLC (K-line) and the SRS unit, the VSA modulator-control unit, the immobilizer-keyless control unit, the audio unit, the SH-AWD control unit, the active damper control unit, or the TPMS control unit, or the MICU.

23. Connect DLC terminal No. 7 to body ground with a jumper wire.

Fig. 137: Identifying DLC Terminal 7 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Check for continuity between body ground and these connector terminals:

CONNECTOR TERMINALS CHART

Connector	Terminal
SRS unit A(28P)	No. 24 (LT BLU)
VSA modulator-control unit 46P	No. 15 (LT BLU)
Immobilizer-keyless control unit 7P	No. 5 (LT BLU)
Audio unit 17P	No. 6 (LT BLU)
SH-AWD control unit 20P	No. 5 (LT BLU)
Active damper control unit 14P	No. 3 (LT BLU)
TPMS control unit 20P	No. 7 (LT BLU)
MICU 30P	No. 6 (LT BLU)

Is there continuity between the DLC terminal and each of the terminals in the chart?

YES - Replace the unit that does not communicate with the HDS.

NO - Repair open in the wire between the DLC (K-line) and the appropriate connector.

25. Do the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**) to make sure the gauge is known-good. If the function test is OK, go to step 22.
26. Check for B-CAN system DTCs without the HDS (see **WITHOUT HDS (USE ONLY IF THE HDS IS UNAVAILABLE)**).

Is DTC B1168, B1169, and/or B1178 indicated?

YES - Go to step 39.

NO - Go to step 27.

27. Turn the ignition switch OFF;
28. Disconnect the HDS from the DLC.
29. Measure voltage between DLC terminal No. 16 and body ground.

Terminal side of female terminals

Fig. 138: Identifying Voltage Between DLC Terminal 16 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 30.

NO - Repair open in the wire between DLC terminal No. 16 and the No. 7 BACK UP (10 A) fuse in the under-dash fuse/relay box.

30. Measure voltage between DLC terminals No. 4 and No. 16.

DATA LINK CONNECTOR (DLC)

Terminal side of female terminals

Fig. 139: Identifying Voltage Between DLC Terminals 4 And 16
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 31.

NO - Repair open in the wire between DLC terminal No. 4 and G503.

31. Connect the HDS to the DLC (see **GENERAL TROUBLESHOOTING INFORMATION**).
32. Jump the SCS line with the HDS.
33. Disconnect PCM connector A (49P).
34. Disconnect the HDS from the DLC.
35. Connect DLC terminal No. 6 to body ground with a jumper wire.

DATA LINK CONNECTOR (DLC)

Terminal side of female terminals

Fig. 140: Identifying DLC Terminal 6 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Check for continuity between PCM connector terminal A48 and body ground.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Fig. 141: Identifying Continuity Between PCM Connector Terminal A48 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 37.

NO - Repair open in the wire between the PCM (A48) and DLC terminal No. 6.

37. Disconnect the jumper wire from DLC terminal No. 6, then connect DLC terminal No. 14 to body ground with a jumper wire.

Fig. 142: Identifying DLC Terminal 14 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Check for continuity between PCM connector terminal A49 and body ground.

Terminal side of female terminals

Fig. 143: Identifying Continuity Between PCM Connector Terminal A49 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

NO - Repair open in the wire between the PCM (A49) and DLC terminal No. 14.

39. Try to start the engine.

Does the engine start and idle smoothly?

YES - Go to F-CAN circuit troubleshooting (see **F-CAN Circuit Troubleshooting (Part 1)**).

NO - Go to step 40.

40. Turn the ignition switch OFF.

41. Check the No. 3 IG1 MAIN (50 A) fuse in the main under-hood fuse box.

Is the fuse OK?

YES - Repair open in the wire between the No. 3 IG1 MAIN (50 A) fuse and the ignition switch. If the wire is OK, go to step 42.

NO - Repair short in the wire between the No. 3 IG1 MAIN (50 A) fuse and the main under-hood fuse box. Also replace the No. 3 IG1 MAIN (50 A) fuse.

42. Inspect the No. 8 IGP (15 A) fuse in the under-hood fuse/relay box.

Is the fuse OK?

YES - Go to step 48.

NO - Go to step 43.

43. Remove the blown No. 8 IGP (15 A) fuse from the under-hood fuse/relay box.
44. Jump the SCS line with the HDS.
45. Disconnect PCM connector B (49P).
46. Check for continuity between PCM connector terminal B3 and body ground.

Fig. 144: Identifying Continuity Between PCM Connector Terminal B3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 47.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**). Also replace the No. 8 IGP (15 A) fuse in the under-hood fuse/relay box.

47. Disconnect each of the components or connectors below, one at a time, and check for continuity between PCM connector terminal B3 and body ground.
 - PGM-FI main relay 2
 - Each injector 2P connector
 - Camshaft position (CMP) sensor 3P connector
 - Crankshaft position (CKP) sensor 6P connector
 - Under-hood fuse/relay box 9P connector

Does continuity go away when one of the above components is disconnected?

YES - Replace the component that made the short to body ground go away when disconnected. Also replace the No. 8 IGP (15 A) fuse.

NO - Repair short in the wire between the PCM (B3) and the PGM-FI main relay 2, the injector, the CKP

sensor, or the under-hood fuse/relay box. Also replace the No. 8 IGP (15 A) fuse in the under-hood fuse/relay box.

48. Inspect the No. 19 FUEL PUMP (20 A) fuse in the under-dash fuse/relay box.

Is the fuse OK?

YES - Go to step 55.

NO - Go to step 49.

49. Remove the blown No. 19 FUEL PUMP (20 A) fuse in the under-dash fuse/relay box.
50. Jump the SCS line with the HDS.
51. Disconnect PCM connector B (49P).
52. Check for continuity between PCM connector terminal B42 and body ground.

Fig. 145: Identifying Continuity Between PCM Connector Terminal B42 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 53.

NO - Replace the No. 19 FUEL PUMP (20 A) fuse in the under-dash fuse/relay box, and update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

53. Disconnect the dashboard wire harness 39P connector from socket X on the under-dash fuse/relay box (A) (see **UNDER-DASH FUSE/RELAY BOX**).

Fig. 146: Identifying Relay Box

Courtesy of AMERICAN HONDA MOTOR CO., INC.

54. Check for continuity between PCM connector terminal B42 and body ground.

Fig. 147: Identifying Continuity Between PCM Connector Terminal B42 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the under-dash fuse/relay box and the PCM (B42), or between the under-dash fuse/relay box and the immobilizer control unit. Also replace the No. 19 FUEL PUMP (20 A) fuse in the under-dash fuse/relay box.

NO - Replace the under-dash fuse/relay box.

55. Jump the SCS line with the HDS.
56. Disconnect PCM connectors A (49P) and B (49P).
57. Turn the ignition switch ON (II).
58. Measure voltage between PCM connector terminal B42 and body ground.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE PGM-FI System - MDX

Fig. 148: Identifying Voltage Between PCM Connector Terminal B42 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 59.

NO - Repair open in the wire between the No. 19 FUEL PUMP (20 A) fuse and the PCM (B42).

59. Measure voltage between PCM connector terminal A6 and body ground.

Fig. 149: Identifying Voltage Between PCM Connector Terminal A6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 63.

NO - Go to step 60.

60. Turn the ignition switch OFF.

61. Disconnect the under-hood fuse/relay box 14P connector.

62. Check for continuity between PCM connector terminal A6 and under-hood fuse/relay box 14P connector

terminal No. 5.

Fig. 150: Identifying Continuity Between PCM Connector Terminal A6 And Under-Hood Fuse 14P Connector Terminal 5

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -

- Replace the under-hood fuse/relay box.
- Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

NO - Repair open in the wire between the PCM (A6) and the under-hood fuse/relay box.

63. Turn the ignition switch OFF.
64. Disconnect the under-hood fuse/relay box 9P connector.
65. Check for continuity between PCM connector terminal B3 and under-hood fuse/relay box 9P connector terminal No. 1.

Fig. 151: Identifying Continuity Between PCM Connector Terminal B3 And Under-Hood Fuse 9P Connector Terminal 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 66.

NO - Repair open in the wire between the PCM (B3) and the under-hood fuse/relay box.

66. Test PGM-FI main relay 1 in the under-hood fuse/ relay box (see **POWER RELAY TEST**).

Is PGM-FI main relay 1 OK?

YES - Go to step 67.

NO - Replace the relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**).

67. Disconnect PCM connector C (49P).
68. Check for continuity between body ground and PCM connector terminals B1, B40, B41, C1, and C41 individually.

Fig. 152: Identifying Continuity Between Body Ground And PCM Connector Terminals B1 And C41

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 69.

NO - Repair open in the wire between the PCM (B1, B40, B41, C1, C41) and G101.

69. Check for continuity between PCM connector terminal B36 and body ground.

Fig. 153: Identifying Continuity Between PCM Connector Terminal B36 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 70.

NO - Go to step 71.

70. Continue to check for continuity between PCM connector terminal B36 and body ground, while disconnecting these parts, one at a time:

- MAP sensor 3P connector
- Output shaft (countershaft) speed sensor 3P connector

Does continuity go away when one of the above components is disconnected?

YES - Replace the part that caused an open when it was disconnected.

NO - Repair short in the wire between the PCM (B36) and the MAP sensor, or the output shaft (countershaft) speed sensor.

71. Check for continuity between PCM connector terminal C12 and body ground.

Fig. 154: Identifying Continuity Between PCM Connector Terminal C12 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 72.

NO - Go to step 73.

72. Continue to check for continuity between PCM connector terminal C12 and body ground, while disconnecting these parts, one at a time:

- EGR valve 6P connector
- Input shaft (mainshaft) speed sensor 3P connector

Does continuity go away when one of the above components is disconnected?

YES - Replace the part that caused an open when it was disconnected.

NO - Repair short in the wire between the PCM (C12) and the EGR valve or the input shaft (mainshaft) speed sensor.

73. Check for continuity between PCM connector terminal A24 and body ground.

Fig. 155: Identifying Continuity Between PCM Connector Terminal A24 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 74.

NO - Go to step 75.

74. Continue to check for continuity between PCM connector terminal A24 and body ground, while disconnecting the APP sensor 6P connector.

Is there continuity?

YES - Repair short in the wire between the PCM (A24) and APP sensor A.

NO - Replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).

75. Check for continuity between PCM connector terminal A25 and body ground.

Fig. 156: Identifying Continuity Between PCM Connector Terminal A25 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 76.

NO - Go to step 77.

76. Continue to check for continuity between PCM connector terminal A25 and body ground, while disconnecting these connectors one at a time.

- APP sensor 6P connector
- FTP sensor 3P connector

Does continuity go away when one of the above components is disconnected?

YES - Replace the part that caused an open when it was disconnected.

NO - Repair short in the wire between the PCM (A25) and APP sensor B or the FTP sensor.

77. Check for continuity between PCM connector terminal B18 and body ground.

Fig. 157: Identifying Continuity Between PCM Connector Terminal B18 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 78.

NO - Go to step 79.

78. Continue to check for continuity between PCM connector terminal B18 and body ground, while disconnecting the throttle body 6P connector.

Is there continuity?

YES - Repair short in the wire between the PCM (B18) and the throttle body.

NO - Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).

79. Check for continuity between PCM connector terminal C11 and body ground.

Fig. 158: Identifying Continuity Between PCM Connector Terminal C11 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 80.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

80. Continue to check for continuity between PCM connector terminal C11 and body ground, while disconnecting the IMT actuator.

Is there continuity?

YES - Repair short in the wire between the PCM (C11) and the IMT actuator.

NO - Replace the IMT actuator (see **IMT ACTUATOR REPLACEMENT**).

INJECTOR REPLACEMENT

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Remove the intake manifold (see **REMOVAL**).
3. Disconnect the connectors from the injectors (A).

Fig. 159: Identifying Injectors And Fuel Rail Mounting Bolts And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the quick-connect fitting (B).
5. Remove the fuel rail mounting bolts (C) and nut (D) from the fuel rails (E).
6. Remove the injector clips (F) from the fuel rail.
7. Remove the injectors from the rails.
8. Coat the new O-ring (A) with clean engine oil, and insert the injectors (B) into the fuel rails (C).

Fig. 160: Identifying Injectors To Fuel Rails And O-Ring With Clean Engine Oil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the injector clips (D).
10. Coat the new injector O-ring (E) with clean engine oil.
11. Install the injectors in the injector base.
12. Install the fuel rail mounting bolts and nut.
13. Install the injector connectors.
14. Connect the quick-connect fitting (see **FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS**).
15. Turn the ignition switch ON (II), but do not operate the starter. After the fuel pump runs for about 2 seconds, the fuel pressure in the fuel line rises. Repeat this two or three times, then check for fuel leakage.
16. Install the intake manifold.

MAP SENSOR REPLACEMENT

1. Remove the engine cover (see step 1 **INTAKE MANIFOLD REMOVAL AND INSTALLATION**).
2. Disconnect the MAP sensor connector (A).

Fig. 161: Identifying MAP Sensor Connector With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw (B).
4. Remove the MAP sensor (C).
5. Install the parts in the reverse order of removal with a new O-ring (D).

MAF SENSOR/IAT SENSOR REPLACEMENT

1. Disconnect the MAF sensor/IAT sensor connector (A).

Fig. 162: Identifying MAF Sensor/IAT Sensor Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screw (B).
3. Remove the MAF sensor/IAT sensor (G).
4. Install the parts in the reverse order of removal with a new gasket (D).

ECT SENSOR 1 REPLACEMENT

1. Drain the engine coolant (see COOLANT REPLACEMENT).
2. Remove the engine cover (see step 1 REMOVAL).
3. Remove the main under-hood fuse/relay box.
4. Disconnect the ECT sensor 1 connector (A).

Fig. 163: Identifying ECT Sensor 1 Connector With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove ECT sensor 1 (B).
6. Install the parts in the reverse order of removal with a new O-ring (C), then refill the radiator with engine coolant (see COOLANT REPLACEMENT).

ECT SENSOR 2 REPLACEMENT

1. Drain the engine coolant (see COOLANT REPLACEMENT).
2. Remove the splash shield.
3. Disconnect the ECT sensor 2 connector (A).

Fig. 164: Identifying ECT Sensor 2 Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove ECT sensor 2 (B).
5. Install the parts in the reverse order of removal with a new O-ring (C), then refill the radiator with engine coolant (see **COOLANT REPLACEMENT**).

A/F SENSOR REPLACEMENT

Special Tools Required

O2 sensor socket wrench, Snap-on YA8875 or SWR2, or equivalent, commercially available

FRONT BANK (BANK 2)

1. Disconnect the front A/F sensor connector (A), then remove the A/F sensor (B).

Fig. 165: Identifying Front A/F Sensor Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parts in the reverse order of removal.

REAR BANK (BANK 1)

1. Disconnect the rear A/F sensor connector (A), then remove the rear A/F sensor (B).

Fig. 166: Identifying Rear A/F Sensor Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parts in the reverse order of removal.

SECONDARY HO2S REPLACEMENT**Special Tools Required**

O2 sensor socket wrench. Snap-on YA8875 or SWR2, or equivalent, commercially available

FRONT BANK (BANK 2)

1. Disconnect the front secondary HO2S 4P connector (A), then remove the front secondary HO2S (B).

Fig. 167: Identifying Front Secondary HO2S 4P Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parts in the reverse order of removal.

REAR BANK(BANK 1)

1. Disconnect the rear secondary HO2S 4P connector (A), then remove the rear secondary HO2S (B).

Fig. 168: Identifying Rear Secondary HO2S 4P Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parts in the reverse order of removal.

CMP SENSOR REPLACEMENT

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the front camshaft pulley (CMP sensor pulse plate) (A).

Fig. 169: Identifying Front Camshaft Pulley (CMP Sensor Pulse Plate) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the CMP sensor connector (B), then remove the back cover (C).
4. Remove the CMP sensor (A) from the back cover.

Fig. 170: Identifying CMP Sensor From Back Cover With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the parts in the reverse order of removal. Install the timing belt (see **TIMING BELT INSTALLATION**).
6. Do the CKP pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

CKP SENSOR REPLACEMENT

1. Move the auto-tensioner to remove tension from the drive belt, then remove the belt (see **DRIVE BELT INSPECTION**).
2. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
3. Remove the upper and lower front covers from the engine (see **TIMING BELT INSPECTION**).
4. Remove the CKP sensor (A) from the oil pump.

Fig. 171: Identifying CKP Sensor From Oil Pump With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the parts in the reverse order of removal.
6. Do the CKP pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

KNOCK SENSOR REPLACEMENT

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the injector rails and the injector base (see **INJECTOR BASE REMOVAL AND INSTALLATION**).
3. Disconnect the knock sensor 1P connector (A), then remove the knock sensor (B).

Fig. 172: Identifying Knock Sensor 1P Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the parts in the reverse order of removal.

PCM UPDATE

Special Tools Required

- Honda diagnostic system (HDS) tablet tester
- Honda interface module (HIM) and an iN workstation with HDS and CM update software
- HDS pocket tester
- GNA600 and an iN workstation with HDS and CM update software

NOTE:

- Use this procedure when you need to update the PCM during troubleshooting procedures.
- Make sure the HDS is loaded with the latest software version.
- Before you update the PCM, make sure the battery in the vehicle is fully charged and connect a jumper battery (not a battery charger) to maintain system voltage.
- Never turn the ignition switch to LOCK (0) or ACC (I) during the update. If there is a problem with the update, leave the ignition switch ON (II).
- To prevent PCM damage, do not operate anything electrical (headlights, audio system, brakes, A/C, power windows, door locks, etc.) during the update.
- To ensure the latest program is installed, do a PCM update whenever the PCM is substituted or replaced.

- You cannot update a PCM with a program it already has. It will only accept a new program.
 - High temperature in the engine compartment might cause the PCM to become too hot to run the update. If the engine has been running before this procedure, open the hood and cool the engine compartment.
 - If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashing during the update, leave the ignition switch in ON (II) position when you disconnect the HIM from the data link connector (DLC). This prevents damage to the PCM.
1. Turn the ignition switch to ON (II), but do not start the engine.
 2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 173: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting(see DLC CIRCUIT TROUBLESHOOTING). If you are returning from the DLC circuit troubleshooting, skip steps 4 and 5 and clean the throttle body after updating the PCM.
4. USA, Canada models: Select the INSPECTION MENU with the HDS.
5. USA, Canada models: Select the ETCS TEST, then select the TP POSITION CHECK, and follow the HDS screen prompts.

NOTE: USA, Canada models: If the TP POSITION CHECK indicates FAILED, continue this procedure.

6. Exit the HDS (USA, Canada models), then select the update mode, and follow the screen prompts to update the PCM.

7. If the software in the PCM is the latest, disconnect the HDS/HIM from the DLC, and go back to the procedure that you were doing. If the software in the PCM is not the latest, follow the instructions on the screen. If prompted to choose the PGM-FI system or the A/T system, make sure you update both.

NOTE: If the PCM update system requires you to cool the PCM, follow the instructions on screen. If you run into a problem during the update procedure (programming takes over 15 minutes, status bar goes over 100 %, D or immobilizer indicator flashes, HDS tablet freezes, etc.), follow these steps to minimize the chance of damaging the PCM:

- Leave the ignition switch in ON (II) position.
 - Connect a jumper battery (do not connect a battery charger).
 - Shut down the HDS.
 - Disconnect the HDS from the DLC.
 - Reboot the HDS.
 - Reconnect the HDS to the DLC, and try the update procedure again.
8. USA, Canada models: If the TP POSITION CHECK failed in step 6, clean the throttle body(see THROTTLE BODY CLEANING .
 9. Do the PCM idle learn procedure.(see PCM IDLE LEARN PROCEDURE
 10. Do the CKP learn procedure.

PCM REPLACEMENT

Special Tools Required

- Honda diagnostic system (HDS) tablet tester
- Honda interface module (HIM) and an iN workstation with HDS and CM update software
- HDS pocket tester
- GNA600 and an iN workstation with HDS and CM update software

NOTE:

- Make sure the HDS is loaded with the latest software version.
- If you are replacing the PCM after substituting a known-good PCM, reinstall the original PCM, then do this procedure.
- USA, Canada models: During the procedure, if any READ DATA, WRITE DATA, or other data Checks fail, note the failure, then continue.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 174: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to the **DLC circuit troubleshooting** (see). If you are returning from DLC circuit troubleshooting, skip steps 4 through 9, 18 through 23, and 26 through 28, and do this after replacing the PCM;
 - USA, Canada models: Replace the engine oil (see **ENGINE OIL REPLACEMENT**) and the engine oil filter (see **ENGINE OIL FILTER REPLACEMENT**).
 - USA, Canada models: Replace the ATF (see **ATF REPLACEMENT**).
 - USA, Canada models: Clean the throttle body (see **THROTTLE BODY CLEANING**).
4. USA, Canada models: Select the PGM-FI system with the HDS.
5. USA, Canada models: Select the INSPECTION MENU with the HDS.
6. USA, Canada models: Select the ETCS TEST, then select the TP POSITION CHECK, and follow the screen prompts.

NOTE: **USA, Canada models: If the TP POSITION CHECK indicates FAILED, continue with this procedure.**

7. USA, Canada models: Select the REPLACE PCM MENU, then select READ DATA and follow the screen prompts.

NOTE:

- **USA, Canada models: Doing this step copies (READS) the engine oil life data from the original PCM so you can later download (WRITES) it into the new PCM.**
- **USA, Canada models: If READ DATA indicates FAILED, continue with this procedure.**

8. USA, Canada models: Select the A/T system with the HDS.
9. USA, Canada models: Select the REPLACE TCM/ PCM MENU, then select READ DATA and follow

the screen prompts.

NOTE:

- **USA, Canada models:** Doing this step copies (READS) the ATF life data from the original PCM so you can later download (WRITES) it into the new PCM.
- **USA, Canada models:** If READ DATA indicates FAILED, continue with this procedure.

10. Turn the ignition switch OFF.
11. Jump the SCS line with the HDS.
12. Remove the bracket (D), then free the A/C discharge line (E) from the clip (F) and remove the A/C suction line mounting bracket bolt (G).

Fig. 175: Identifying Bracket And A/C Suction Line Mounting Bracket Bolt With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the cover (H), then disconnect the PCM connectors A, B, and C.

NOTE:

PCM connectors A, B, and C have symbols (A=[], B=delta, C=o) embossed on them for identification.

14. Remove the bolts (I), then remove the PCM (J).
15. Install the parts in the reverse order of removal.
16. Turn the ignition switch ON (II).
17. **USA, Canada models:** Manually input the VIN to the PCM with the HDS.

NOTE: **USA, Canada models: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the PCM; ignore it, and continue this procedure.**

18. USA, Canada models: If the READ DATA (engine oil life) failed in step 7, go to step 21. Otherwise, go to step 19.
19. USA, Canada models: Select the PGM-FI system with the HDS.
20. USA, Canada models: Select the REPLACE PCM MENU, then select WRITE DATA and follow the screen prompts.

NOTE: **USA, Canada models: If the WRITE DATA indicates FAILED, continue with this procedure.**

21. USA, Canada models: If the READ DATA (ATF life) failed in step 9, go to step 24. Otherwise go to step 22.
22. USA, Canada models: Select the A/T SYSTEM with the HDS.
23. USA, Canada models: Select the REPLACE TCM/ PCM MENU, then select WRITE DATA and follow the screen prompts.

NOTE: **USA, Canada models: If the WRITE DATA indicates FAILED, continue with this procedure.**

24. Select IMMOBI system with the HDS.
25. Enter the immobilizer code with the PCM replacement procedure in the HDS; it allows you to start the engine.
26. USA, Canada models: If the TP POSITION CHECK failed in step 6 clean the throttle body (see **THROTTLE BODY CLEANING**), then go to step 27.
27. USA, Canada models: If the READ DATA failed in step 7 or the WRITE DATA failed in step 20, replace the engine oil (see **ENGINE OIL REPLACEMENT**) and engine oil filter (see **ENGINE OIL FILTER REPLACEMENT**), then go to step 28.
28. USA, Canada models: If the READ DATA failed in step 9 or the WRITE DATA failed in step 21, replace the ATF (see **ATF REPLACEMENT**), then go to step 29.
29. Select PGM-FI system and reset the PCM with the HDS.
30. Update the PCM if it does not have the latest software (see **PCM UPDATE**).
31. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
32. Do the CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

2007-09 ACCESSORIES AND EQUIPMENT

Power Mirrors-MDX

COMPONENT LOCATION INDEX

POWER MIRROR SWITCH

REAR WINDOW DEFOGGER/
POWER MIRROR DEFOGGER SWITCH
(Built into the climate control unit)

***** :CAN line
***** :UART line

Fig. 3: Power Mirrors - Circuit Diagram (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

POWER MIRROR SWITCH TEST/ REPLACEMENT

1. Carefully pry the switch panel out from the dashboard.
2. Disconnect the 10P connector (A) from the power mirror switch (B).

Fig. 4: Identifying 10P Connector And Power Mirror Switch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.

Terminal Position	1	2	3	4	7	8	9	10
UP					○	—	—	○
DOWN				○	—	—	—	○
LEFT						○	—	○
RIGHT			○	—	—	—	—	○
L		○	—	—	—	—	—	○
R	○	—	—	—	—	—	—	○

Fig. 5: Continuity Chart
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the power mirror switch.

POWER MIRROR ACTUATOR TEST

NOTE: The power mirror actuator can be tested by using the HDS and following these steps:

- Select BODY ELECTRICAL from the SYSTEM SELECT menu.
- Select FUNCTION TEST, and then the appropriate power mirror function test.

1. Remove the door panel (see FRONT DOOR PANEL REMOVAL/INSTALLATION).

2. Disconnect the 16P connector (A) from the power mirror actuator (B).

Fig. 6: Identifying 16P Connector And Power Mirror Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check actuator operation by connecting power and ground according to the table.

LEFT

Terminal	9	10	11
Position			
TILT UP	⊖	⊕	
TILT DOWN	⊕	⊖	
SWING LEFT		⊕	⊖
SWING RIGHT		⊖	⊕

Fig. 7: Actuator Operation Chart - Left
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RIGHT

Terminal	9	10	11
Position			
TILT UP		⊖	⊕
TILT DOWN		⊕	⊖
SWING LEFT	⊖	⊕	
SWING RIGHT	⊕	⊖	

Fig. 8: Actuator Operation Chart - Right
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the mirror fails to work properly, replace the mirror actuator.

DEFOGGER TEST

5. Measure the resistance between the No. 1 and No. 2 terminals of the 16P connector. There should be about 8 ohms or less. If there is no continuity, check for an open circuit.

POWER MIRROR ACTUATOR REPLACEMENT

ACTUATOR REPLACEMENT

1. Remove the mirror holder (see **POWER MIRROR REPLACEMENT**).
2. Remove the three TORX screws using a tamperproof T10 TORX bit.
3. Remove the connectors (A) and the actuator (B).

Fig. 9: Identifying Connectors And Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the actuator in the reverse order of removal.

ACTUATOR HARNESS REPLACEMENT

1. Remove the mirror holder (see **POWER MIRROR REPLACEMENT**).
2. Remove the power mirror (see **POWER MIRROR REPLACEMENT**).
3. Remove the three TORX screws from the actuator (A) using a tamperproof T10 TORX bit.

Fig. 10: Identifying Actuator, Housing, Gasket And Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the three TORX screws from the housing (B) using a tamperproof T10 TORX bit.
5. Disconnect the connectors from the actuator and the side turn signal light.
6. Remove the gasket (C) and the harness (D) from the power mirror.
7. Route the wire harness of the new actuator through the hole in the bracket and the gasket in the reverse order of removal.
8. Connect the connectors to the actuator and the side turn signal light securely.
9. Install the actuator, housing and the gasket in the reverse order of removal.
10. Install the power mirror on the door, and make sure the actuator, mirror defogger, and side turn signal light operation.

2007-09 ACCESSORIES AND EQUIPMENT

Power Seats - MDX

COMPONENT LOCATION INDEX

For the driver's power seat, refer to the Driving Position Memory System (DPMS)

Component Location Index, see **DRIVER POSITION MEMORY SYSTEM (DPMS)**

Fig. 1: Identifying Power Seats Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM - FRONT PASSENGER'S POWER SEAT**Fig. 2: Circuit Diagram - Front Passenger's Power Seat**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT

FRONT PASSENGER'S SEAT

1. Remove the power seat adjustment switch knobs and recline cover from the front passenger's power seat, then remove the power seat switch (see **FRONT SEAT DISASSEMBLY/REASSEMBLY**).
2. Disconnect the 12P connector from the power seat adjustment switch (A).

Fig. 3: Identifying Power Seat Adjustment Switch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the adjustment switch knobs to the switch.
4. Check for continuity between the terminals in each switch position according to the table.

Terminal		1	2	3	4	5	6	7	8	9	10	11	12
Position													
SLIDE SWITCH	Forward							○	○		○	○	
	Backward							○	○		○	○	
RECLINE SWITCH	Forward		○		○		○						○
	Backward		○		○		○						○
FRONT UP-DOWN SWITCH	UP			○					○		○	○	
	DOWN			○					○	○	○		
REAR UP-DOWN SWITCH	UP	○	○		○	○							
	DOWN	○	○		○	○							

Fig. 4: Continuity Chart
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity is not as specified, replace the switch.

FRONT PASSENGER'S POWER SEAT MOTOR TEST

1. Remove the front passenger's power seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the power seat adjustment switch (B) (see **POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT**) and disconnect the 12P connector (A) from the switch.

Fig. 5: Identifying Power Seat Adjustment Switch And 12P Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the power seat adjustment switch 12P connector, test the motor by applying battery power and ground to the terminals according to the table.

Slide motor:

Terminal Position	7	11
Forward	⊖	⊕
Backward	⊕	⊖

Fig. 6: Slide Motor Chart
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Recline motor:

Terminal Position	6	12
Forward	⊖	⊕
Backward	⊕	⊖

Fig. 7: Recline Motor Chart

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front up-down motor:

Terminal Position	3	9
UP	⊕	⊖
DOWN	⊖	⊕

Fig. 8: Front Up-Down Motor Chart

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear up-down motor:

Terminal Position	1	5
UP	⊕	⊖
DOWN	⊖	⊕

Fig. 9: Rear Up-Down Motor Chart

SYMPTOM TROUBLESHOOTING INDEX

Find the symptom in the chart below, and do the related procedures in the order listed until you find the cause.

TROUBLESHOOTING CHART

Symptom	Procedure(s)	Also check for
Hard steering	Troubleshoot the system (see <u>SYMPTOM TROUBLESHOOTING</u>).	• Modified suspension • Damaged suspension • Tire sizes, tire varieties, and air pressure
		Front wheel

THIS IS MADE BY FIXYOURCAR 2008@AOL.COM

NO DUPLICATION ALLOWED!

2008 Acura MDX

2007-09 STEERING Manual And Power Steering - MDX

Assist (excessively light steering at high speed)	Check the rack guide adjustment (see <u>RACK GUIDE ADJUSTMENT</u>).	alignment (see <u>WHEEL ALIGNMENT</u>)
Shock or vibration when the steering wheel is turned to full lock	1. Check the rack guide adjustment (see <u>RACK GUIDE ADJUSTMENT</u>). 2. Check the drive belt for slippage (see <u>DRIVE BELT INSPECTION</u>). 3. Check the power steering pump fluid pressure with T/N 07406-0010001 (see <u>PUMP PRESSURE TEST WITH T/N 07406-0010001</u>), T/N 07406-001000A or T/N 07406-001A101 (see <u>PUMP PRESSURE TEST WITH T/N 07406-001000A OR T/N 07406-001A101</u>). 4. Overhaul the steering gearbox (see <u>STEERING GEARBOX OVERHAUL</u>).	
Steering wheel will not return smoothly	1. Check cylinder lines for deformation. 2. Check the ball joints for binding. 3. Check wheel alignment (see <u>WHEEL ALIGNMENT</u>). 4. Overhaul the steering gearbox (see step 2).	
Uneven or rough steering	1. Check the rack guide adjustment (see <u>RACK GUIDE ADJUSTMENT</u>). 2. Check the drive belt (see <u>DRIVE BELT INSPECTION</u>). 3. Check for low or erratic engine idle speed (see <u>IDLE SPEED INSPECTION</u>). 4. Check for air in the power steering system due to air entering inlet side of pump. 5. Check for low fluid level in the power steering reservoir due to possible leaks in system (see <u>POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT</u>). 6. Overhaul the steering gearbox (see step 2).	
Steering wheel kicks back during wide turns	1. Check the drive belt (see <u>DRIVE BELT INSPECTION</u>). 2. Check the power steering pump fluid pressure with T/N 07406-0010001 (see <u>PUMP PRESSURE TEST WITH T/N 07406-0010001</u>), T/N 07406-001000A or T/N 07406-001A101 (see <u>PUMP PRESSURE TEST WITH T/N 07406-001000A OR T/N 07406-001A101</u>).	
	1. Check when the noise occurs:	

2008 Acura MDX

2007-09 STEERING Manual And Power Steering - MDX

Humming noise from the power steering system	• If the noise is heard during the first 2-3 minutes after starting the engine in cold weather, this is normal. • If the noise is heard when the wheel is turned with the vehicle stopped, this is normal due to the fluid pulsation. 2. Check for the high-pressure hose touching the subframe or body. 3. Check for automatic transmission torque converter noise. 4. Check for air bubbles in the power steering fluid, leak on inlet side of pump. 5. Check for particle contamination of fluid and restricted filter in the reservoir.	Pump pressure
Power steering rack rattle or chattering	1. Check for loose steering components (tie-rod and ball joints). Tighten or replace as necessary. 2. Check the steering column shaft for wobbling. If the steering column wobbles, replace the steering column assembly (see <u>STEERING COLUMN REMOVAL AND INSTALLATION</u>). 3. Check the rack guide adjustment (see <u>RACK GUIDE ADJUSTMENT</u>). 4. Check the power steering pump pulley: • If the pulley is loose, tighten it (see step 33). • If the pump shaft is loose, replace the pump (see <u>PUMP REPLACEMENT</u>).	
Hissing from the power steering system/foaming fluid	• Check the fluid level. If low, fill the reservoir to the proper level and check for leaks (see <u>FLUID REPLACEMENT</u>). • Check the reservoir for leaks. • Check for crushed inlet hose or loose hose clamp allowing air into the suction side of the system (see <u>FLUID LEAKAGE INSPECTION</u>). • Check the power steering pump shaft oil seal for leaks.	Air in the P/S fluid
Noise from the power steering pump	• Compare the pump noise at normal operating temperature to another like vehicle (pump noise during the first 2-3 minutes after starting the engine in cold weather is normal). • Remove and inspect the pump for wear and damage (see <u>PUMP REPLACEMENT</u>).	• P/S pump pressure • Air in the P/S fluid
Squeaking from the power steering pump	Check the drive belt (see <u>DRIVE BELT INSPECTION</u>).	

2008 Acura MDX

2007-09 STEERING Manual And Power Steering - MDX

Fluid leaks from the steering gearbox	- Fluid leaks from the top of the valve body unit. Replace the valve body unit (see <u>STEERING GEARBOX OVERHAUL</u>). - Fluid leaks from the driver's side boot. Replace the valve oil seal on the pinion shaft. Replace the cylinder end seal on the gearbox side. - Fluid leaks from the passenger's side boot. Replace the cylinder end seal on the cylinder side. - Fluid leaks from pinion shaft near the lower steering joint bolt. Replace the valve body unit (see <u>STEERING GEARBOX OVERHAUL</u>). - Fluid leaks from the steering damping valve covers on the valve body unit. Replace the valve housing.	
Fluid leaks from the power steering line	- Fluid leaks from the cylinder line connections (flare nuts). Tighten the connection and retest (see <u>POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT</u>). - Fluid leaks from a damaged cylinder line(s). Replace the cylinder line (see <u>POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT</u>). - Fluid leaks from the pump outlet hose or return line fitting on the valve body unit (flare nuts). Tighten the fitting and retest. If it still leaks, replace the hose, the line, or valve body unit as necessary.	
Fluid leaks from the power steering pump	- Fluid leaks from the front oil seal. Replace the front oil seal. - Fluid leaks from the power steering pump housing. Replace the leaking O-rings or seals (see <u>FLUID LEAKAGE INSPECTION</u>), and if necessary replace the power steering pump (see <u>PUMP REPLACEMENT</u>).	
Fluid leaks from the power steering reservoir	- Fluid leaks from around the reservoir cap because fluid level is too high. Drain the reservoir to the proper level. If the fluid is aerated check for an air leak on the inlet side of pump. - Fluid leaks from reservoir. Check the reservoir for cracks and replace as necessary.	
Fluid leaks from the power steering pump outlet hose (high-pressure)	- Check the fitting for loose bolts. If the bolts are tight, replace the fitting O-ring. - Fluid leaks at the swagged joint. Replace the pump outlet hose.	
Fluid leaks from the		

2008 Acura MDX

2007-09 STEERING Manual And Power Steering - MDX

power steering pump inlet hose (low-pressure)	Check the hose for damage, deterioration, or improper assembly. Replace or repair as necessary.	
---	---	--

SYMPTOM TROUBLESHOOTING

Hard Steering

1. Check the power assist (see **STEERING WHEEL ROTATIONAL PLAY CHECK**).

Is the initial turning load more than 29 N (3.0 kgf, 6.6 lbf) ?

YES - Go to step 2.

NO - Power assist is OK.

2. Connect the P/S joint adapter (pump), P/S joint adapter (hose), and P/S pressure gauge T/N 07406-0010001 (see **PUMP PRESSURE TEST WITH T/N 07406-0010001**), T/N 07406-001000A or T/N 07406-001A101 (see **PUMP PRESSURE TEST WITH T/N 07406-001000A OR T/N 07406-001A101**) to the pump.
3. Measure steady-state fluid pressure from the pump at idle.

Is the pressure 1,470 kPa (15 kgf/cm² , 213 psi) or less?

YES - Go to step 4.

NO - Go to step 8.

4. Measure the pump relief pressure at idle.

Is the pressure 8,920- 9,420 kPa (91-96 kgf/cm² , 1,290 - 1,370 psi) or more?

YES - Go to step 5.

NO - Go to step 9.

5. With a spring scale, measure the power assist in both directions, to the left and to the right.

Are the two measurements within 5.0 N (0.51 kgf, 1.12 lbf) of each other?

YES - Go to step 6.

NO - Go to step 11.

6. Measure the fluid pressure with both pressure gauge valves open (if so equipped), while turning the steering wheel fully to the left and fully to the right.

Is the pressure 8,920- 9,420 kPa (91-96 kgf/² , 1,290 - 1,370 psi) or more?

YES - Go to step 7.

NO - Faulty steering gearbox.

7. Adjust the rack guide (see **RACK GUIDE ADJUSTMENT**), and retest.

Is the steering OK?

YES - Repair is completed.

NO - Faulty steering gearbox.

8. Check the outlet and return hoses and lines between the pump and the steering gearbox for clogging and deformation.

Are the lines clogged or deformed?

YES - Repair or replace the lines.

NO - Faulty valve body unit.

9. Disassemble the pump (see **PUMP OVERHAUL**).

10. Check the flow control valve for smooth movement and leaks (see step 13).

Is the flow control valve OK?

YES - Faulty pump assembly.

NO - Faulty flow control valve.

11. Check the cylinder lines for deformation (see **POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT**).

Are any of the lines deformed?

YES - Replace the deformed line.

NO - Go to step 12.

12. Check for a bent rack shaft or misadjusted rack guide (too tight).

Is the rack shaft bent or the rack guide adjusted too tight?

YES - Replace the rack shaft, or readjust the rack guide.

NO - Faulty valve body unit.

STEERING WHEEL ROTATIONAL PLAY CHECK

1. Turn the front wheels to the straight ahead position.
2. Measure how far you can turn the steering wheel left and right without moving the front wheels.
 - If the play is within the limit, the steering gearbox and linkages are OK.
 - If the play exceeds the limit, adjust the rack guide (see **RACK GUIDE ADJUSTMENT**). If the play is still excessive after rack guide adjustment, inspect the steering linkage and steering gearbox (see **STEERING LINKAGE AND GEARBOX INSPECTION**).

Rotational play: 0-10 mm (0-0.39 in.)

Rotational play: 0—10 mm (0—0.39 in.)

Fig. 3: Identifying Steering Wheel Rotational Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

POWER ASSIST CHECK

NOTE: This test should be done with original equipment tires and wheels at the correct tire pressure.

1. Check the power steering fluid level (see **FLUID REPLACEMENT**).
2. Start the engine, let it idle, and turn the steering wheel from lock-to-lock several times to warm up the fluid.
3. Attach a commercially available spring scale to the steering wheel. With the engine idling and the vehicle on a clean, dry floor, pull the scale as shown and read it as soon as the tires begin to turn.
 - If the scale reads no more than the specification, the steering gearbox and pump are OK.

- If the scale reads more than the specification, troubleshoot the steering system (see **SYMPTOM TROUBLESHOOTING**).

Initial turning load: 29 N (3.0 kgf, 6.6 lbf)

Fig. 4: Identifying Steering Wheel With Spring Scale
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING LINKAGE AND GEARBOX INSPECTION

Fig. 5: Identifying Steering Linkage And Gearbox Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PUMP PRESSURE TEST WITH T/N 07406-0010001

Special Tools Required

- P/S joint adapter (pump) 07VAK-P8A011A
- P/S joint adapter plate (pump) 07VAK-P8A012B
- P/S joint adapter (hose) 07RAK-S040122
- P/S pressure gauge 07406-0010001

Check the fluid pressure as follows to determine whether the trouble is in the pump or steering gearbox.

1. Check the power steering fluid level (see **FLUID REPLACEMENT**).
2. Disconnect the pump outlet hose (A) from the pump outlet with care so as not to spill the power steering fluid on the frame and other parts, then install the P/S joint adapter (pump) on the pump outlet (B) with the P/S joint outlet plate.

Fig. 6: Identifying P/S Joint Adapter (Hose) To P/S Pressure Gauge With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the P/S joint adapter (hose) to the P/S pressure gauge, then connect the pump outlet hose to the P/S joint adapter (hose).
4. Install the P/S pressure gauge to the P/S joint adapter (pump).
5. Fully open the shut-off valve (A).

Fig. 7: Identifying Shut-Off Valve And Pressure Control Valve
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Fully open the pressure control valve (B).
7. Start the engine and let it idle.
8. Turn the steering wheel from lock-to-lock several times to warm the fluid to operating temperature at 158°F(70°C).
9. Measure steady-state fluid pressure while the engine is idling. If the pump is in good condition, the gauge should read no more than 1,470 kPa (15kgf/cm² , 213 psi).

If it reads high, check for:

- Clogged or deformed inlet or return line and return or outlet hose between the pump and the steering gearbox.
 - Clogged valve body unit.
10. Close the shut-off valve, then close the pressure control valve gradually until the pressure gauge needle is stable. Read the pressure.

NOTE: Do not keep the shut-off valve closed more than 5 seconds or the pump could be damaged by over-heating.

11. Immediately open the shut-off valve fully. If the pump is in good condition, the gauge should read at least 8,920-9,420 kPa (91 -96 kgf/cm² , 1,290-1,370 psi). A low reading means pump output is too low for full assist. Repair or replace the pump.

PUMP PRESSURE TEST WITH T/N 07406-001000A OR T/N 07406-001A101

Special Tools Required

- P/S joint adapter (pump) 07VAK-P8A011A
- P/S joint adapter plate (pump) 07VAK-P8A012B
- P/S joint adapter (hose) 07RAK-S040122
- P/S pressure gauge 07406-001000A or 07406-001A101

Check the fluid pressure as follows to determine whether the trouble is in the pump or steering gearbox.

1. Check the power steering fluid level (see **FLUID REPLACEMENT**).
2. Disconnect the pump outlet hose (A) from the pump outlet with care so as not to spill the power steering fluid on the frame and other parts, then install the P/S joint adapter (pump) on the pump outlet (B) with the P/S joint outlet plate.

Fig. 8: Identifying Pump Outlet Hose From Pump Outlet With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the P/S joint adapter (hose) to the P/S pressure gauge, then connect the pump outlet hose to the P/S joint adapter (hose).
4. Install the P/S pressure gauge to the P/S joint adapter (pump).
5. Open the shut-off valve (A) fully.

Fig. 9: Identifying Shut-Off Valve

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Start the engine and let it idle.
7. Turn the steering wheel from lock-to-lock several times to warm the fluid to operating temperature at 158T(70°C).
8. Measure steady-state fluid pressure while the engine is idling. If the pump is in good condition, the gauge should read no more than 1,470 kPa (15kgf/cm² , 213psi).

If it reads high, check for:

- Clogged or deformed inlet or return line and return or outlet hose between the pump and the steering gearbox.
 - Clogged valve body unit.
9. Let the engine idle, and gradually close the shut-off valve and immediately read the pressure.

NOTE: **Do not keep the shut-off valve closed more than 5 seconds or the pump could be damaged by over-heating.**

10. Immediately open the shut-off valve fully. If the pump is in good condition, the gauge should read at least 8,920-9,420 kPa (91-96 kgf/cm² , 1,290-1,370 psi). A low reading means pump output is too low for full assist. Repair or replace the pump.

FLUID LEAKAGE INSPECTION

Fig. 10: Identifying Fluid Leakage Components

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FLUID REPLACEMENT

Check the reservoir (A) at regular intervals, and add the recommended fluid as necessary. Always use Acura Power Steering Fluid. Using any other type of power steering fluid or automatic transmission fluid can cause increased wear and poor steering in cold weather.

NOTE: If the fluid is contaminated, the screen in the reservoir may be partially blocked. Replace the reservoir if necessary.

System capacity:

1.03 L (1.09 US. qt) at disassembly

Reservoir capacity:

0.34 L (0.36 US. qt)

Fig. 11: Identifying Reservoir

Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the reservoir from its holder. Raise the reservoir, then disconnect the return hose (A) to drain the reservoir. Take care not to spill the fluid on the body and parts. Wipe off any spilled fluid at once.

NOTE: **Inspect the reservoir screen for any debris. If the reservoir screen is clogged, replace the reservoir.**

Fig. 12: Identifying Fluid In Container

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect a hose (B) of suitable diameter to the disconnected return hose, and put the hose end in a suitable container.

3. Start the engine, let it run at idle, and turn the steering wheel from lock-to-lock several times. When fluid stops running out of the hose, shut off the engine. Discard the fluid.
4. Reinstall the return hose on the reservoir.
5. Fill the reservoir to the upper level line (C).
6. Start the engine and run it at idle, then turn the steering from lock-to-lock several times to bleed air from the system.
7. Recheck the fluid level and add some if necessary. Do not fill the reservoir beyond the upper level line.
8. If the fluid is contaminated, dark, or discolored, repeat the procedure as necessary.

POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT

Note these items during installation:

- Connect each hose to the corresponding line securely until it contacts the stop on the line. Install the clamp or adjustable clamp at the specified distance from the hose end as shown.
- Check all clamps for deterioration or deformation; replace the clamps with new ones if necessary.
- Add the recommended power steering fluid to the specified level on the reservoir and check for leaks.

Fig. 13: Identifying Hose Clamp Dimension With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

PUMP REPLACEMENT

1. Place a suitable container under the vehicle.
2. Drain the power steering fluid from the reservoir (see **FLUID REPLACEMENT**).
3. Remove the engine cover (see step 8 **ENGINE REMOVAL**).
4. Remove the drive belt (A) from the pump pulley (see **DRIVE BELT INSPECTION**).

Fig. 14: Identifying Drive Belt, Pump Pulley, Pump Inlet Hose With Pump Outlet Hose With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Cover the auto-tensioner, alternator, and A/C compressor with several shop towels to protect them from spilled power steering fluid. Disconnect the pump inlet hose (B) and pump outlet hose (C) from the pump (D), and plug them. Take care not to spill the fluid on the body or parts. Wipe off any spilled fluid at once. Do not turn the steering wheel with the pump removed.
6. Remove the pump mounting bolts (E).
7. Cover the opening of the pump with a piece of tape to prevent foreign material from entering the pump.
8. Connect the pump inlet hose and pump outlet hose onto the new pump with the new O-ring (F).
9. Loosely install the pump in the pump bracket with the mounting bolts, then tighten the pump fittings securely.
10. Tighten the pump mounting bolts to the specified torque.
11. Install the drive belt (A).

Note these items during drive belt installation:

- Make sure that the belt is properly positioned on the pulleys (B).
- Do not get power steering fluid or grease on the auto-tensioner, alternator, A/C compressor, and drive belt or pulley faces. Clean off any fluid or grease before installation.

Fig. 15: Identifying Drive Belt Installation Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Fill the reservoir to the upper level line (see **FLUID REPLACEMENT**).

PUMP OVERHAUL

Exploded View

Replace the pump as an assembly if any of the parts indicated with an asterisk (*) are worn or damaged.

2008 Acura MDX

2007-09 STEERING Manual And Power Steering - MDX

Fig. 16: Exploded View Of Pump Overhaul With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Pulley holder 07ZAB-S5A0100
- Attachment, 28 x 30 mm 07946-1870100
- Driver 07749-0010000

Disassembly

NOTE: Refer to the **EXPLODED VIEW** as needed during the following procedure.

1. Drain the fluid from the power steering pump (see **FLUID REPLACEMENT**).

2. Remove the power steering pump (see **PUMP REPLACEMENT**).
3. Hold the power steering pump (A) in a vise with soft jaws (B), then hold the pulley (C) with the pulley holder (D), and remove the pulley nut (E) and pulley. Be careful not to damage the pump housing with the jaws of the vise.

Fig. 17: Identifying Power Steering Pump In Vise With Soft Jaws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the inlet joint and O-ring.
5. Loosen the flow control valve cap with a hex wrench, and remove the cap, O-ring, spring, and flow control valve.
6. Remove the pump cover and pump cover seal.
7. Remove the outer side plate, cam ring, rotor, vanes, side plate and O-rings.
8. Remove the snap ring, then remove the sub valve from the pump housing.
9. Remove the snap ring, then remove the driveshaft by tapping the shaft end with a soft face hammer.
10. Remove the pump seal from the pump housing.

Inspection

11. Check the flow control valve for wear, burrs, and other damage to the edges of the grooves in the valve.

Fig. 18: Identifying Flow Control Valve
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Inspect the bore of the flow control valve on the pump housing for scratches and wear.
13. Slip the flow control valve back in the pump housing, and check that it moves in and out smoothly. If

OK, go to step 14; if not, replace the pump as an assembly. The flow control valve (A) is not available separately.

Fig. 19: Identifying Flow Control Valve

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Attach a hose (A) to the end of the flow control valve (B) as shown. Then submerge the flow control valve in a container of power steering fluid or solvent (C), and apply compressed air in the hose.
 - If air bubbles leak through the valve at less than 98 kPa (1.0 kgf/cm² , 14.2 psi), replace the pump as an assembly. The flow control valve is not available separately.
 - If the flow control valve is OK, set it aside for reassembly later.

Fig. 20: Identifying Compressed Air In Hose

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Inspect the ball bearing by rotating the outer race slowly. If you feel any play (axial or radial) or roughness, remove the faulty ball bearing (A) and install a new one (B).

Fig. 21: Identifying Ball Bearing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Inspect each part shown with an asterisk in the Exploded View. If any of them are worn or damaged, replace the pump as an assembly.

Reassembly

17. Align the pin (A) of the subvalve (B) with the oil passage (C) in the pump housing, and push the subvalve into place, then install the snap ring (D).

Fig. 22: Identifying Pin Of Subvalve With Oil Passage In Pump Housing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the new pump seal (A) (with its grooved side facing in) into the pump housing (B) by hand first, then drive it in using the driver and attachment until there is no step at the top of the pump seal, and the seal is fully seated in the pump housing.

Fig. 23: Identifying Pump Seal Into Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Position the driveshaft (A) in the pump housing, then press it in with the appropriate size socket wrench (B) as shown.

Fig. 24: Identifying Driveshaft In Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the 40 mm snap ring (C) with its beveled edge facing out.
21. Coat the new pump cover seal (A) with power steering fluid, and install it into the groove in the pump cover (B).

Fig. 25: Identifying Pump Cover Seal And Pump Cover With Roll Pins
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the outer side plate (C) over the two roll pins (D) with its arrow marks stamped (E) facing down.
23. Set the cam ring (A) over the two roll pins (D) with the "*** " marks (B) facing down.

Fig. 26: Identifying Cam Ring To Roll Pins
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Install the rotor (A) to the pump cover (B) with its "*** " mark (C) facing up.

Fig. 27: Identifying Pump Cover And Rotor With Vanes
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Set the 10 vanes (D) in the grooves in the rotor. Make sure that the round ends(E) of the vanes are in contact with the sliding surface of the cam ring.
26. Coat the new 15.2 mm O-ring (A) with power steering fluid, and install it into the groove in the side plate (B).

Fig. 28: Identifying Roll Pin Set Holes In Side Plate With Roll Pins
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Install the side plate on the cam ring (C) by aligning the roll pin set holes (D) in the side plate with the roll pins(E).
28. Coat the new 51.0 mm O-ring (A) with power steering fluid, and position it in the bottom of the pump housing.

Fig. 29: Identifying Pump Cover Assembly With O-Ring With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Install the pump cover assembly (B) in the pump housing. Tighten the bolts to the specified torque alternating in two or more steps.

30. Coat the flow control valve (A) with power steering fluid, then install it and the spring (B) in the pump housing.

Fig. 30: Identifying Flow Control Valve And Spring With O-Ring With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Coat the new 16.7 mm O-ring (C) with power steering fluid, and install it on the flow control valve cap (D), then install the cap on the pump housing. Tighten it to the specified torque.
32. Coat the new 13.0 mm O-ring (A) with power steering fluid, and install it on the inlet joint (B). Install the inlet joint on the pump housing.

Fig. 31: Identifying Inlet Joint On Pump Housing With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Install the pulley (A), then loosely install the pulley nut (B). Hold the steering pump in a vise with soft jaws. Be careful not to damage the pump housing with the jaws of the vise.

Fig. 32: Identifying Pulley With Pulley Holder With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Hold the pulley with the pulley holder, and tighten the pulley nut to the specified torque.
35. Check that the pump turns smoothly by turning the pulley by hand. If it turns hard, loosen the four flange bolts on the cover, then retighten them in the same manner as in step 29. Retest. If the pump is still hard to turn, replace the pump.
36. Reinstall the power steering pump (see **PUMP REPLACEMENT**).

STEERING WHEEL REMOVAL

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Do the battery terminal disconnection procedure(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Align the front wheels straight ahead, then remove the driver's airbag from the steering wheel (see **DRIVER'S AIRBAG REPLACEMENT**).
3. Disconnect the cable reel subharness connector (A).

Fig. 33: Identifying Cable Reel Subharness Connector And Steering Wheel Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the steering wheel bolt (B).
5. Install a commercially available steering wheel puller (A) on the steering wheel (B). Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

Note these items when removing the steering wheel:

- Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
- If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads upon each puller bolt.

Fig. 34: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller, then remove the steering wheel bolt and steering wheel from the steering column.

Fig. 35: Identifying Steering Wheel Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING WHEEL DISASSEMBLY/REASSEMBLY

Fig. 36: Identifying Steering Wheel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING WHEEL INSTALLATION

1. Before installing the steering wheel, make sure the front wheels are pointing straight ahead, then center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops. Then rotate it counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 37: Identifying Steering Wheel Installation Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Position the two tabs (A) of the turn signal canceling sleeve (B) as shown. Install the steering wheel on to the steering column shaft, making sure the steering wheel hub (C) engages the pins (D) of the cable reel and tabs of the turn signal canceling sleeve. Do not tap on the steering wheel or steering column shaft when installing the steering wheel.

Fig. 38: Identifying Steering Wheel On To Steering Column Shaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the steering wheel bolt (A), and tighten it to the specified torque. Connect the cable reel subharness connector (B). Make sure the wire harness is routed and fastened properly.

Fig. 39: Identifying Steering Wheel Bolt And Cable Reel Subharness Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the driver's airbag, and confirm that the system is operating properly (see **DRIVER'S AIRBAG REPLACEMENT**).
5. Reconnect the negative battery cable to the battery, and do these tasks:
 - Turn the ignition switch ON (II); the SRS indicator should come on for about 6 seconds and then go off.
 - Enter the anti-theft code for the audio system or the navigation system (if equipped).
 - Make sure the horn and turn signal switches work properly.
 - Make sure the steering wheel switches work properly.
 - Do the steering column position memorization (see **STEERING COLUMN POSITION MEMORIZATION**).
6. After installation, do these checks:
 - Check the steering wheel spoke angle. If the steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft serrations.
 - Set the steering column to the center tilt position, then do the front toe inspection (see **WHEEL ALIGNMENT**).

STEERING COLUMN REMOVAL AND INSTALLATION

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**), and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

Removal

1. Adjust the steering column to full tilt down position, and to the full telescopic out position.
2. Make sure the ignition switch is LOCK (0), then disconnect the negative battery cable from the battery.

3. Remove the driver's airbag assembly and the steering wheel (see **STEERING WHEEL REMOVAL**).
4. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
5. Remove the steering joint cover (A).

Fig. 40: Identifying Steering Joint Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the upper column cover (see **COLUMN COVER REMOVAL/INSTALLATION**), and disconnect the connectors from the power tilt/telescopic switch (A) (see **POWER TILT/TELESCOPIC STEERING SWITCH TEST/REPLACEMENT**).

Fig. 41: Identifying Steering Column Remove / Install Components With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the wire harness connectors from the combination switch assembly and the cable reel (B).
8. Remove the combination switch assembly from the steering column shaft by removing the three screws (C).
9. Disconnect the connectors from the ignition switch, and release the wire harness clips from the steering column.
10. Disconnect the connectors (D) from the tilt/telescopic motors.
11. Disconnect the connectors from the tilt/telescopic control unit (E).
12. Remove the steering joint bolts (F), then disconnect the steering joint (G) from the pinion shaft and the steering column shaft.
13. Remove the steering column (H) by removing the attaching nuts and bolts.
14. Remove the center guide (I) (if equipped) from the top of the pinion shaft, and discard it. The center guide is for factory assembly use only.

Installation

1. Install the steering column in the reverse order of removal; and note these items:
 - Take care not to let the sliding plates (A) fall out of position during column installation.
 - Make sure the wires are not caught or pinched by any parts.
 - Make sure that there is no gap (B) between bracket (C), sliding plates, and absorbing plate (D) once column is mounted in place and fixing bolts and nuts are tightened.

**Fig. 42: Identifying Sliding Plates, Bracket And Fixing Bolts**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center the steering rack within its stroke.
3. Insert the upper end of the steering joint onto the steering shaft (A) (line up the bolt hole (B) with the flat portion (C) on the shaft), and loosely install the upper joint bolt (D).

Fig. 43: Identifying Upper End Of Steering Joint Onto Steering Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slip the lower end of the steering joint onto the pinion shaft taking care to align the gap (E) within the angle.
5. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft then loosely install the joint bolt (C).

Fig. 44: Identifying Bolt Hole On Steering Joint With Groove With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pull on the steering joint to make sure that the steering joint is fully seated, then tighten the lower joint

bolt to the specified torque.

7. Tighten the upper joint bolt (D) to the specified torque.
8. Install the steering joint cover (A).

Fig. 45: Identifying Steering Joint Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the steering wheel (see **STEERING WHEEL INSTALLATION**).
10. Reconnect the negative battery cable to the battery, and do these tasks:
 - Turn the ignition switch ON (II); the SRS indicator should come on for about 6 seconds and then go off.
 - Enter the anti-theft code for the audio system or the navigation system (if equipped).
 - Make sure the horn and turn signal switches work properly.
 - Make sure the steering wheel switches work properly.
 - Do the steering column position memorization (see **STEERING COLUMN POSITION MEMORIZATION**).
11. After installation, do these checks:
 - Check the steering wheel spoke angle. If the steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft serrations.
 - Set the steering column to the center tilt position, then do the front toe inspection (see **WHEEL ALIGNMENT**).

STEERING COLUMN POSITION MEMORIZATION

NOTE: If the battery is disconnected, the power tilt and telescopic steering wheel system needs to be reset when you reconnect the battery.

1. Insert the built-in key into the ignition switch, and remove it.
2. The steering wheel automatically moves fully in and up to let you know the system is reset.

STEERING COLUMN INSPECTION

- Check the steering column ball bearing (A) and the steering joint bearings (B) for play and proper movement. If any bearing is noisy or has excessive play, replace the steering column as an assembly.
- Check the sliding capsules (C) for distortion or breakage. If there is distortion or breakage, replace the steering column as an assembly.
- Check the tilt mechanism and telescopic mechanism for movement and damage.
- Check the absorbing plates (D) for distortion or breakage. If there is distortion or breakage, replace the steering column as an assembly.

Fig. 46: Identifying Steering Column Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING LOCK REPLACEMENT

1. Remove the steering column (see **STEERING COLUMN REMOVAL AND INSTALLATION**).
2. Center-punch each of the two shear bolts, and drill their heads off with a 5 mm (3/16 in.) drill bit. Be careful not to damage the switch body and steering column when removing the shear bolts.

Fig. 47: Identifying Shear Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the shear bolts from the switch body.
4. Install the switch body without the key inserted.

5. Loosely tighten the new shear bolts.
6. Insert the ignition key, and check for proper operation of the steering wheel lock and that the ignition key turns freely.
7. Tighten the shear bolts (A) until the hex heads (B) twist off.

Fig. 48: Identifying Shear Bolts With Hex Heads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Register the immobilizer-keyless control unit (see **IMMOBILIZER KEY REGISTRATION**), and make sure the immobilizer system works properly.

RACK GUIDE ADJUSTMENT

Special Tools Required

Locknut wrench, 43 mm 07MAA-SL00200

1. Set the wheels in the straight ahead position.
2. Loosen the rack guide screw locknut (A) with the locknut wrench, then remove the rack guide screw (B).

Fig. 49: Identifying Rack Guide Screw Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the old sealant from the rack guide screw (A), and apply new sealant (Loctite 565) to the middle of the threads (B). Loosely install the rack guide screw on the steering gearbox.

NOTE: If more than 5 minutes has passed after applying the sealant, remove the old sealant and residue, and reapply new sealant.

Fig. 50: Identifying Rack Guide Screw

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the rack guide screw (A) to 25 N.m (2.5 kgf.m, 18 lbf.ft), then loosen it.

Fig. 51: Identifying Rack Guide Screw With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Retighten the rack guide screw to 3.9 N.m (0.4 kgf.m, 4 lbf.ft), then back it off to the specified angle.

Specified return angle: 15±5°

6. Hold the rack guide screw stationary with a wrench, and tighten the locknut by hand until it's fully seated.
7. Install the locknut wrench on the locknut (B), and hold the rack guide screw stationary with a wrench.

Tighten the locknut to the specified torque.

8. Check for unusual steering effort through the complete turning range.
9. Check the steering wheel rotation play (see **STEERING WHEEL ROTATIONAL PLAY CHECK**) and the power assist (see **POWER ASSIST CHECK**).

STEERING GEARBOX REMOVAL

Special Tools Required

- Ball joint remover, 28 mm 07MAC-SLOA202
- Front subframe adapter EQS02BMDXSB0 *
- Engine support hanger, A and Reds AAR-T-12566 *
- Engine hanger balance bar VSB02C000019 *
- Engine hanger adapter set VSB02C000031 *

* Available through the Acura Tool and Equipment program, 1-888-424-6857.

Note these items during removal:

- Using solvent and a brush, wash any oil and dirt off the valve body unit, it's lines, and the end of the steering gearbox. Blow dry with compressed air.
 - Be sure to remove the steering wheel before disconnecting the steering joint. Damage to the cable reel can occur.
 - Lower the front subframe from the body and remove the steering gearbox through the gap produced by lowering the front subframe.
1. Drain the power steering fluid (see **FLUID REPLACEMENT**).
 2. Do the battery terminal disconnection procedure.(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**)
 3. Raise the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
 4. Remove the front wheels.
 5. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
 6. Remove the steering wheel (see **STEERING WHEEL REMOVAL**).
 7. Remove steering joint cover (A).

Fig. 52: Identifying Steering Joint Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the steering joint bolts (A), disconnect the steering joint by moving the steering joint (B) toward the column.

Fig. 53: Identifying Steering Joint And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the center guide (A) (if equipped) from the top of the pinion shaft (B), and discard it. The center guide is for factory assembly use only.

Fig. 54: Identifying Center Guide And Pinion Shaft
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Apply vinyl tape to the splines on the pinion shaft.
11. Remove the air cleaner housing (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**).
12. Remove the service caps (A) for the front damper flange nuts from the cowl cover (B). Position the engine hanger adapters (VSB02C000031) with the "FRONT" mark facing forward over the damper flange nuts.

Fig. 55: Identifying Service Caps
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the engine hanger balancer bar (VSB02C000019); attach the front arm (A) to the front cylinder head with a spacer (B) and 10 x 1.25 mm bolt (C), attach the rear arm (D) to the rear cylinder head with 8 x 1.25 mm bolt (E).

Fig. 56: Identifying Engine Hanger Balancer Bar (VSB02C000019) On Cylinder Head
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the engine support hanger (AAR-T-12566) to the vehicle, and attach the hook to the slotted hole in the engine hanger balancer bar. Tighten the wing nut (F) by hand to lift and support the engine/transmission.
15. Loosen the adjustable hose clamp (A), and disconnect the return hose (B).

Fig. 57: Identifying Return Hose And Adjustable Hose Clamp
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Loosen the 16 mm flare nut (C), and disconnect the inlet line (D).
17. Remove the cotter pins (A) from the tie-rod ball joints and remove the nuts (B).

Fig. 58: Identifying Tie-Rod Ball Joints And Knuckles
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Separate the tie-rod ball joints and knuckles using the ball joint remover (see **BALL JOINT REMOVAL**).
19. Disconnect the lower arm ball joints from the knuckles (see **LOWER ARM REMOVAL/INSTALLATION**).
20. Disconnect the stabilizer links (A) from the lower arms (see **STABILIZER LINK REMOVAL/INSTALLATION**).

Fig. 59: Identifying Stabilizer Links From Lower Arms
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Remove the front undercover (see **FRONT UNDERCOVER REPLACEMENT**) and the front splash shield (see **SPLASH SHIELD REPLACEMENT**).
22. Remove the front subframe stiffener plate (A).

Fig. 60: Identifying Front Subframe Stiffener Plate And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Remove exhaust pipe A (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**).
24. Remove the propeller shaft and propeller shaft protectors (see **PROPELLER SHAFT REMOVAL**).
25. Remove the inlet line clamp bolts (A).

Fig. 61: Identifying Inlet Line Clamp Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Remove the rear mount stop (A) from the rear engine mount.

Fig. 62: Identifying Rear Mount Stop And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Remove the rear engine mount (A) from the base bracket, and move it aside.

Fig. 63: Identifying Rear Engine Mount And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Remove the base bracket (A) from the front subframe.

Fig. 64: Identifying Base Bracket And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Remove the ground cable bolt (A) from the transmission.

Fig. 65: Identifying Ground Cable Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Make reference marks (A) on the body across the marks (B) on the edge of the front subframe (C).

Fig. 66: Identifying Reference Marks Location
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Loosen the four bolts (A) holding the adjustable arms (B) of the front subframe adapter to its center plate.

Fig. 67: Identifying Adjustable Arms Of Front Subframe Adapter To Center Plate
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Line up the slots in the arms with the bolt holes on the corner of the jack base, then attach the front subframe adapter (A) to the jack base with the bolts (B) that came with the jack. Tighten all bolts securely.

Fig. 68: Identifying Front Subframe With Transmission Jack With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Raise the jack to vehicle height, then attach the front subframe adapter to the front subframe using the subframe stiffener mounting bolts (C) and bolt holes.
34. Support the front subframe securely by raising the transmission jack.
35. Remove the mounting bolts (A) from the front subframe front brackets (B).

Fig. 69: Identifying Mounting Bolts From Front Subframe Front Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Loosen the special bolts (C) on the front subframe front brackets so they are about 40 mm (1 9/16 in.) from the mounting surface. Do not loosen the special bolts more than necessary.
37. Remove the mounting bolts (A) from the front subframe rear brackets (B).

Fig. 70: Identifying Mounting Bolts From Front Subframe Rear Brackets
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Loosen the special bolts (C) on the front subframe rear brackets so they are about 40 mm (1 9/16 in.) from the mounting surface. Do not loosen the special bolts more than necessary.
39. Lower the transmission jack slowly until the front subframe has dropped about 40 mm (1 9/16 in.).
40. Remove the mounting bolts (A) from the left side of the steering gearbox.

Fig. 71: Identifying Mounting Bolts From Left Side Of Steering Gearbox
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. Remove the gearbox stiffener bracket (A) from the left side of the front subframe.

Fig. 72: Identifying Gearbox Stiffener Bracket From Left Side Of Front Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Remove the mounting bolts from the right side of the steering gearbox, then remove the mounting bracket (A) and cushion (B).

Fig. 73: Identifying Mounting Bracket And Cushion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Carefully move the steering gearbox (A) toward the driver's side until the pinion shaft clears the wheelwell opening on the frame.

Fig. 74: Identifying Steering Gearbox

Courtesy of AMERICAN HONDA MOTOR CO., INC.

44. Remove the steering gearbox through the wheelwell opening on the driver's side.

Fig. 75: Identifying Steering Gearbox

Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Remove the pinion shaft grommet B from the top of the valve housing.

Fig. 76: Identifying Pinion Shaft Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. Replace the pinion shaft grommet A if necessary.

Fig. 77: Identifying Pinion Shaft Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. After removing the steering gearbox, make sure that no power steering fluid gets on the gearbox mount cushions, gearbox housing, surface of the front subframe and stiffener. Wipe off any spilled fluid at once.

STEERING GEARBOX OVERHAUL

Exploded View

Fig. 78: Exploded View Of Steering Gearbox Overhaul With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Driver handle, 480 mm 070GD-0010100
- Driver head 07946-MJ00201
- Piston seal ring guide 07LAG-SM40100
- Piston seal ring sizing tool 07LAG-SM40200
- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300
- Pincer Oetiker 1098, or equivalent, commercially available

NOTE: Refer to the EXPLODED VIEW as needed during the following procedure.

Removal

1. Remove the steering gearbox (see **STEERING GEARBOX REMOVAL**).

Disassembly

2. Remove the boot bands (A) and tie-rod clips (B). Pull the boots away from the ends of the steering gearbox.

Fig. 79: Identifying Boot Bands And Tie-Rod Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Unbend the lock washer (A).

Fig. 80: Identifying Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Hold the flat surface sections (A) of the steering rack (B) with one wrench, and unscrew both rack ends (C) with another wrench. Be careful not to damage the rack surface with the wrench.

Fig. 81: Identifying Flat Surface Sections Of Steering Rack With Wrench
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the lock washer (D) and stop washer (E).
6. Loosen the locknut (A), then remove the rack guide screw (B).

Fig. 82: Identifying Spring, Rack Guide, Gearbox Housing, Locknut And Rack Guide Screw
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the spring (C) and the rack guide (D) from the gearbox housing.
8. Remove the cylinder lines from the steering gearbox.

NOTE: Use a second wrench when loosening the cylinder lines to avoid damage to the fittings on the steering gearbox. Do not loosen the A and B connectors.

Fig. 83: Identifying Cylinder Lines From Steering Gearbox
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the damper valves (C) and O-rings (D) from the steering gearbox.

NOTE: Do not loosen the A and B connectors.

Fig. 84: Identifying Damper Valves And O-Rings With Connectors
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Drain the fluid from the cylinder fittings by slowly moving the steering rack back and forth.
11. Remove the end plug (A) from the gearbox housing, then remove the self-locking nut (B) from the pinion shaft end.

Fig. 85: Identifying Gearbox Housing Plug And Self-Locking Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Loosen the 16 mm flare nut (A), and remove the return line joint (B).

Fig. 86: Identifying Return Line Joint And Flare Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the two flange bolts, the valve body unit (A), and gasket (B) from the gearbox housing. Check that the valve turns smoothly by turning the pinion shaft. If any play or roughness is felt, replace the valve body unit with a new part. Do not try to disassemble the valve body unit.

Fig. 87: Identifying Valve Body Unit And Gasket From Gearbox Housing
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Slide the steering rack all the way towards the valve body end of the gearbox housing.
15. 15. Turn the rack stop (A) counterclockwise until the end (B) of the circlip (C) sticks out from the hole (D) in the cylinder housing. Then turn it clockwise to remove the circlip.

Fig. 88: Identifying Rack Stop
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the rack stop (A), rack bushing (B), and steering rack (C) from the steering gearbox.

Fig. 89: Identifying Rack Stop, Rack Bushing And Steering Rack From Steering Gearbox
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the O-ring (A) and cylinder end seal (B) from the rack bushing (C).

Fig. 90: Identifying O-Ring And Cylinder Seal From Rack Bushing
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Carefully pry the piston seal ring (A) and O-ring (B) off the rack piston. Be careful not to damage the inside of the seal ring groove and piston edges when removing the seal ring.

Fig. 91: Identifying Piston Seal Ring And O-Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Insert the driver handle and driver head, and carefully place them on the cylinder end seal (A) as shown. Make sure that the driver head is securely positioned on the cylinder end seal.

**Fig. 92: Identifying Placing On Cylinder Seal**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the bearing separator (B) on the gearbox housing. Set the steering gearbox in a press so the gearbox housing points upward, then push out the cylinder end seal by pressing on the end of the driver handle and driver head.
21. Remove the steering gearbox from the press, and set a driver extension (A) on the driver handle. Place the steering gearbox in a press, then remove the cylinder end seal (B) from the gearbox housing by pressing on the end of the extension.

Note these items when pressing the cylinder end seal:

- Keep the tool straight to avoid damaging the cylinder wall. Check the tool angle, and correct it if necessary, when removing the cylinder end seal.
- Use a press to remove the cylinder end seal. Do not try to remove the seal by striking the tool; striking the tool would break the cylinder end seal, and the seal would remain in the gearbox housing.

Fig. 93: Identifying Steering Gearbox

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Reassembly

22. Coat the piston seal ring guide with power steering fluid, then slide it onto the rack, big end first.
23. Position the new O-ring (A) and new piston seal ring (B) on the piston seal ring guide, then slide them down toward the big end of the tool.

Note these items during reassembly:

- Do not over expand the resin seal rings. Install the resin seal rings with care so as not to damage them. After installation, make sure you contract the seal ring using the sizing tool.
- Replace the piston's O-ring and seal ring as a set.

Fig. 94: Identifying Seal Ring On Piston Seal Ring Guide
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Pull the O-ring off into the piston groove, then pull the piston seal ring off into the piston groove on top of the O-ring.
25. Coat the piston seal ring (A), and the inside of the piston seal ring sizing tool with power steering fluid, then carefully slide the tool onto the rack and over the piston seal ring.

Fig. 95: Identifying Sliding Tool Onto Rack And Over Piston Seal Ring
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Move the piston seal ring sizing tool back and forth several times to make sure the piston seal ring fits snugly in the piston.
27. Wrap vinyl tape around the rack teeth and rack end edges, then coat the surface of the tape with power steering fluid. Make sure that the vinyl tape is wrapped carefully so that there is no stepped portion.

Fig. 96: Identifying Vinyl Tape Around Rack Teeth And Rack
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Coat the inside surface of the new cylinder end seal (A) with power steering fluid, then install it onto the steering rack with its grooved side toward the piston. When installing the cylinder end seal, be careful not to damage the lip of the seal with the edges or teeth of the steering rack.

Fig. 97: Identifying Coating Inside Surface Of Cylinder Seal With Power Steering Fluid
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Remove the vinyl tape from the steering rack, then remove any adhesive residue.
30. Apply multipurpose grease to the steering rack teeth, then insert the steering rack into the gearbox housing. Be careful not to damage the inner surface of the cylinder wall with the rack edges.

Fig. 98: Identifying Multipurpose Grease To Steering Rack Teeth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Insert an appropriate sized deep socket (A) onto the steering rack as shown.

Fig. 99: Identifying Appropriate Sized Deep Socket Onto Steering Rack
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Install the cylinder end seal (B) into the bottom of the cylinder by pressing on the tool with a press. Do not push on the tool with excessive force as it may damage the cylinder end seal.
33. Remove the tool, and center the steering rack.
34. Wrap vinyl tape around the rack end edges, and coat the surface of the tape with power steering fluid. Make sure that the vinyl tape is wrapped carefully so that there is no stepped portion.

Fig. 100: Identifying Vinyl Tape Around Rack End Edges
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Coat the inside surface of the new cylinder end seal (A) with power steering fluid, then press it into the rack bushing (B) using the driver and attachment.

Fig. 101: Identifying Coating Inside Surface Of Cylinder Seal With Power Steering Fluid
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Coat the new O-ring (C) with power steering fluid, and carefully fit it in the groove of the rack bushing.
37. Install the rack bushing onto the steering rack with the cylinder end seal grooved side toward the piston. Push in the rack bushing with your finger.

Fig. 102: Identifying Rack Bushing Onto Steering Rack
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Remove the vinyl tape from the steering rack, then remove any adhesive residue.
39. Install the rack stop (A) onto the steering rack so the hole (B) is aligned with the slot (C) on the cylinder housing.

Fig. 103: Identifying Rack Stop Onto Steering Rack Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Insert the end of the circlip (A) into the hole (B) of the rack stop (C). Turn the rack stop counterclockwise until the circlip is fully seated in the rack stop.

Fig. 104: Inserting Circlip Into Hole Of Rack Stop
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. Apply multipurpose grease to the bearings (A) in the gearbox housing, and install the valve body unit (B) and new gasket (C) by engaging the gears. Note the valve body unit installation position (direction of line connections). Then loosely install the two flange bolts.

Fig. 105: Identifying Multipurpose Grease To Bearings In Gearbox Housing With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Install the new self-locking nut (A) onto the pinion shaft end, and tighten to the specified torque.

Fig. 106: Identifying Self-Locking Nut Onto Pinion Shaft With Torque Specifications With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Tighten the flange bolts to the specified torque.
44. Remove the old sealant from the end plug (B), and apply new sealant (Loctite 565) all the way around the threads on the end plug, install the end plug onto the gearbox housing, and tighten it to the specified torque.

NOTE: If more than 5 minutes has passed after applying the sealant, remove the old sealant and residue, and reapply new sealant.

45. After tightening, use a drift to stake (A) the end plug shoulder against the gearbox housing.

Fig. 107: Identifying Mark Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. Install the return line joint (A), and tighten the 16 mm flare nut (B) to the specified torque.

Fig. 108: Identifying Return Line Joint And Flare Nut With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. Coat the new O-rings (A) with power steering fluid, then install the O-rings to the damper valves (B).

Fig. 109: Identifying Damper Valves And O-Rings With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Install the damper valves to the steering gearbox, and tighten the damper valves to the specified torque.
 49. Before installing the cylinder lines, coat the new O-rings with power steering fluid, then install the lines.

Note these items during reassembly:

- Thoroughly clean the joints of the cylinder lines. The joints must be free of foreign material.
- Install the cylinder lines by tightening the flare nuts by hand first, then tighten the flare nuts to the specified torque.

NOTE: Use a second wrench when tightening the cylinder lines to avoid damaging the fittings on the steering gearbox.

Fig. 110: Identifying Cylinder Lines Nut With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

50. Apply multipurpose grease to the sliding surface of the rack guide (A), and install it onto the gearbox housing.

Fig. 111: Identifying Multipurpose Grease To Sliding Surface Of Rack Guide
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

51. Remove the old sealant from the rack guide screw (B), and apply new sealant (Loctite 565) to the middle of the threads of the rack guide screw, then install the spring (C), rack guide screw, and locknut (D).

NOTE: If more than 5 minutes has passed after applying the sealant, remove the old sealant and residue, and reapply new sealant.

52. Adjust the rack guide screw (see **RACK GUIDE ADJUSTMENT**). After adjusting, check that the rack moves smoothly by sliding it right and left.
53. Install the new stop washer (A) and new lock washer (B). Align the lock washer tabs (C) with the slots (D). Install the rack end (E) while holding the lock washer in place. Repeat this step for the other side of the rack.

Fig. 112: Identifying Lock Washer With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

54. Hold the flat surface sections of the steering rack with one wrench, and tighten both rack ends with another wrench. Be careful not to damage the rack surface with the wrench.
55. Bend the lock washer (A) back against the flat spots on the rack end joint housing.

Fig. 113: Identifying Lock Washer
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

56. Apply multipurpose grease to the circumference of the rack end joint housing (A).

Fig. 114: Identifying Multipurpose Grease To Circumference Of Rack Joint Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

57. Apply a light coat of silicone grease to the boot grooves (B) on the rack ends.
58. Center the steering rack within its stroke.
59. Clean off any grease or contamination from the boot installation surfaces (A) on the gearbox housing. Install the boots (B) on the rack ends with the tie-rod clips (C), and fit the boot end on the housing properly.

Fig. 115: Identifying Boots And Rack With Tie-Rod Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

60. After installing the boots, wipe the grease off the threaded section (D) of the rack end.
61. Install the new boot bands by aligning the tabs (A) with the holes (B) of the band.

Fig. 116: Identifying Tabs With Holes Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

62. Close the ear portion (A) of the band with a commercially available Oetiker 1098 pincer or equivalent (B).

Fig. 117: Identifying Portion Of Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

63. Slide the rack right and left to be certain that the boots are not deformed or twisted.

STEERING GEARBOX INSTALLATION

1. Before installing the steering gearbox, make sure that no power steering fluid is on the mating surface of the steering gearbox and front subframe. To prevent the gearbox mounting bolts from loosening after the installation, remove any power steering fluid from the mount cushions and bolt holes.
2. Apply vinyl tape to the splines on the pinion shaft (A).

Fig. 118: Identifying Vinyl Tape To Splines On Pinion Shaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the pinion shaft grommet on the top of the valve housing.

4. Slide the steering gearbox (A) between the front subframe and body from the driver's side.

Fig. 119: Identifying Steering Gearbox Between Front Subframe And Body From Driver'S Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Carefully move the steering gearbox (A) toward the passenger's side until the pinion shaft clears the wheelwell opening on the body.

Fig. 120: Identifying Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Continue moving the gearbox toward the passenger's side until the steering gearbox is in position.
7. Install the gearbox stiffener bracket (A) on the left side of the front subframe, and tighten the bolts and nut to the specified torque.

Fig. 121: Identifying Gearbox Stiffener Bracket On Left Side Of Front Subframe With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Loosely install the new mounting bolts (A) on the left side of the steering gearbox.

Fig. 122: Identifying Mounting Bolts On Left Side Of Steering Gearbox With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Position the cutout (A) on the mounting cushion (B) as shown, and install it on the right side of the steering gearbox.

Fig. 123: Identifying Cutout On Mounting Cushion With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the gearbox mounting bracket (C) over the mounting cushion, and loosely install the mounting bolts.
11. Tighten the mounting bolts on both sides of the steering gearbox to the specified torque alternately in two or more steps.
12. Carefully raise the front subframe with the subframe adapter and the transmission jack or the powertrain lift until the subframe is in its position.
13. Align all reference marks (A) on the front subframe (B) with the body.

Fig. 124: Identifying Reference Marks On Front Subframe With Body
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the front subframe front brackets (A) with mounting bolts (B) and the new special bolts (C), and

tighten to the specified torque.

Fig. 125: Identifying Front Subframe Front Brackets With Mounting Bolts And Special Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the front subframe rear brackets (A) with mounting bolts (B) and the new special bolts (C), and tighten to the specified torque.

Fig. 126: Identifying Front Subframe Rear Brackets With Mounting Bolts And Special Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Lower the transmission jack supporting the front subframe.
17. Install the ground cable bolt (A) to the transmission.

Fig. 127: Identifying Ground Cable Bolt To Transmission With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the base bracket (A) with new mounting bolts (B) and mounting bolts (C), and tighten to the specified torque.

Fig. 128: Identifying Base Bracket With Mounting Bolts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the rear engine mount (A) with new mounting bolts (B), and tighten to the specified torque.

Fig. 129: Identifying Rear Engine Mount With Mounting Bolts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the rear mount stop (A) with new mounting nuts (B), and tighten to the specified torque.

Fig. 130: Identifying Rear Mount Stop With Mounting Nuts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the inlet line clamp bolts (A), and tighten to the specified torque.

Fig. 131: Identifying Inlet Line Clamp Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install exhaust pipe A (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**).
23. Install the propeller shaft and propeller shaft protectors (see **PROPELLER SHAFT INSTALLATION**).
24. Install the front subframe stiffener plate (A) with new mounting bolts (B), and tighten to the specified torque.

Fig. 132: Identifying Front Subframe Stiffener Plate With Mounting Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the front undercover (see **FRONT UNDERCOVER REPLACEMENT**) and the front splash shield (see **SPLASH SHIELD REPLACEMENT**).
26. Connect the stabilizer links (A) to the lower arms (see **STABILIZER LINK REMOVAL/INSTALLATION**).

Fig. 133: Identifying Stabilizer Links To Lower Arms With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Connect the lower arm ball joints to the knuckles (see **LOWER ARM REMOVAL/INSTALLATION**).
28. Wipe off any grease contamination from the ball joint tapered section and threads. Reconnect the tie-rod ball joints (A) to the knuckles. Install the 12 mm nuts (B) and tighten it to the specified torque.

Fig. 134: Identifying Tie-Rod Ball Joints And Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Install the new cotter pin (C) and bend it as shown.
30. Remove the engine support hanger, the hanger balance bar, and the hanger adapter set.
31. Connect the return hose (A) securely, and tighten the adjustable hose clamp (B) (see **POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT**).

Fig. 135: Identifying Return Hose, Hose Clamp And Inlet Line With Flare Nut With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Connect the inlet line (C), and tighten the 16 mm flare nut (D) to the specified torque.
33. Install the front wheel, then set the wheels in the straight ahead position.

NOTE: Before installing the wheel, clean the mating surfaces of the brake disc and inside of the wheel.

34. Lower the vehicle.
35. Center the steering rack within its stroke.
36. Insert the upper end of the steering joint onto the steering shaft (A) (line up the bolt hole (B) with the flat portion (C) on the shaft), and loosely install the upper joint bolt (D).

Fig. 136: Identifying Upper Of Steering Joint Onto Steering Shaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Slip the lower end of the steering joint onto the pinion shaft taking care to align the gap (E) within the angle.
38. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft then loosely install the joint bolt (C).

Fig. 137: Identifying Bolt Hole On Steering Joint With Groove With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Pull on the steering joint to make sure that the steering joint is fully seated, then tighten the lower joint bolt to the specified torque.
40. Tighten the upper joint bolt (D) to the specified torque.
41. Install the steering joint cover (A).

Fig. 138: Identifying Steering Joint Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Install the steering wheel (see STEERING WHEEL INSTALLATION).
43. Do the battery terminal reconnection procedure(see BATTERY TERMINAL DISCONNECTION AND RECONNECTION), and do these tasks:
 - Turn the ignition switch ON (II); the SRS indicator should come on for about 6 seconds and then go off.

- Make sure the horn and turn signal switches work properly.
 - Make sure the steering wheel switches work properly.
44. Fill the system with power steering fluid, and bleed air from the system (see **FLUID REPLACEMENT**).
 45. After installation, do these checks:
 - Start the engine, allow it to idle, and turn the steering wheel from lock-to-lock several times to warm up the fluid. Check the gearbox for leaks (see **FLUID LEAKAGE INSPECTION**).
 - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft serrations, then adjust the front toe by turning the tie-rod ends, if necessary.
 - Set the steering column to the center tilt position, then do the front toe inspection (see **WHEEL ALIGNMENT**).

TIE-ROD BALL JOINT BOOT REPLACEMENT

Special Tools Required

Front hub dis/assembly tool 07965-SA50500

1. Disconnect the tie-rod ball joint from the knuckle (see step 17 on).
2. Remove the tie-rod end from the rack end.
3. Remove the tie-rod ball joint boot from the tie-rod end, and wipe the old grease off the ball pin.
4. Pack the lower area of the ball pin (A) with fresh multipurpose grease.

Fig. 139: Identifying Multipurpose Grease Applying Area
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pack the interior of the new tie-rod ball joint boot (B) and lip (C) with fresh multipurpose grease.

Note these items when installing new grease:

- Keep grease off the boot mounting area (D) and the tapered section (E) of the ball pin.

- Do not allow dust, dirt, or other foreign materials to enter the boot.
6. Install the new tie-rod ball joint boot (A) using the front hub dis/assembly tool. The boot must not have a gap at the boot installation sections (B). After installing the boot, check the ball pin tapered section for grease contamination, and wipe it if necessary.

Fig. 140: Identifying Tie-Rod Ball Joint Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the tie-rod end to the rack end.
8. Connect the tie-rod ball joint to the knuckle (see step 28 on).
9. Check the wheel alignment, and adjust it if necessary (see WHEEL ALIGNMENT).

GEARBOX MOUNT CUSHION REPLACEMENT

1. Remove the steering gearbox (see STEERING GEARBOX REMOVAL).
2. Position the 34 mm socket wrench (A) on the flange part of the gearbox housing with a washer (B), a 10 x 105 mm flange bolt (C) and a 10 mm nut (D) as shown.

Fig. 141: Identifying Socket Wrench On Flange Part Of Gearbox Housing With Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hold the flange bolt with a wrench, and tighten the nut with a wrench. Remove the gearbox mount cushion (E).
4. Apply a mild soap and water solution to the new gearbox mount cushion surface (A), then place it on the gearbox mounting cushion hole.

Fig. 142: Identifying Mild Soap And Water Solution To Gearbox Mount Cushion Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Position the 34 mm socket wrench on the flange part of the gearbox housing with a washer, a flange bolt, and a nut as shown.
6. Install the gearbox mount cushion by tightening the nut until the mount cushion edges (B) contact the gearbox flange surface.
7. Install the steering gearbox (see **STEERING GEARBOX INSTALLATION**).

2007-09 ACCESSORIES AND EQUIPMENT

Power Tailgate - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Power Tailgate Component Location (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 2: Identifying Power Tailgate Component Location (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

The power tailgate can be opened and closed automatically by operating the dashboard switch, outer handle switch (for open), inside tailgate switch (for close) or the keyless transmitter. The power tailgate has two safety functions for safeguarding passengers: obstruction detection, and fall-down detection.

BASIC OPERATION

OPEN: The power tailgate can be opened by operating the driver's switch, outer handle, or the keyless transmitter under the following conditions:

- Tailgate is fully closed (full-latched position is detected.).

- Driver's door or Passenger's door lock knob switch is in UNLOCKED.
- The remote unlock button is pressed twice, and then the tailgate button is pressed and held for 2 seconds (unless customized setting is set to unlock all doors).
- Shift lever is in Park position.
- Vehicle speed is less than 1.2 mph (2 km/h).
- Closer unit detects the neutral position.
- Battery voltage (VBU) is more than 11 V.
- System is not in fail-safe mode.

CLOSE: The power tailgate can be closed by operating the driver's door tailgate switch, inside tailgate switch, or the keyless transmitter under the following conditions:

- Tailgate is fully open.
- Pinch sensor detects no obstruction.
- Closer unit detects the neutral position.
- Battery voltage (VBU) is more than 11 V.
- System is not in fail-safe mode.

OBSTRUCTION DETECTION FUNCTION

If any obstruction is detected while the tailgate is automatically opening or closing, the tailgate will stop and the reverse operation is activated. An obstruction is detected by the tailgate pinch sensor and the pulser in the drive unit. If the obstruction is detected when the shift lever is in any other position than P, or the vehicle speed exceeds 1.2 mph (2 km/h), the tailgate stops moving immediately.

FALL-DOWN DETECTION FUNCTION

This function prevents the tailgate from suddenly falling down because of an accumulation of snow, or other causes. If the pulser in the drive unit detects abnormal pulses, the tailgate starts to open. If this operation is activated twice, the tailgate will close automatically. If the obstruction detection function detects any obstruction several times during this fall-down detection function, the tailgate stops moving.

NOTE: **If the tailgate falls repeatedly, replace the tailgate support strut (see TAILGATE SUPPORT STRUT REPLACEMENT).**

- A. Auto open action completed
- B. Tailgate falling is detected
- C. Clutch reconnect when falling is detected
- D. Auto open action (power tailgate motor reverse action)
- E. Close function activated from fully open position

Fig. 3: Fall-Down Detection Function

Courtesy of AMERICAN HONDA MOTOR CO., INC.

POWER TAILGATE BUZZER BEEP PATTERN

POWER TAILGATE BUZZER BEEP PATTERN

Condition	Beep Pattern
When the tailgate starts to open automatically	Beeps 1 time
When the tailgate starts to close automatically	Beeps 1 time
When the reverse operation is started after the tailgate has detected any obstruction	Beeps 3 times
When the reverse operation is started by switch operation	Beeps 3 times
When the vehicle speed exceeds 1.2 mph (2 km/h) while the tailgate is opening automatically	Beeps intermittently until the condition is corrected
When the operating time is over	Beeps 3 times
When the vehicle speed exceeds 1.2 mph (2 km/h) while the tailgate is closing automatically	Beeps intermittently until the condition is corrected
When the tailgate is not fully-latched, and the following condition is met: The shift lever is any position other than P, and brake pedal position switch and parking brake switch is OFF, and the vehicle speed exceeds 1.2 mph (2 km/h).	Beeps intermittently until the condition is corrected
When the tailgate fall-down detection function is activated	Beeps continuously

RESETTING THE POWER TAILGATE CONTROL UNIT

If the battery terminal is disconnected or No. 7 (10 A) fuse in the under-dash fuse/relay box is removed while the power tailgate is operating, the power tailgate will not be able to open or close automatically until it is reset. To reset the system, fully close the tailgate manually. Once the battery terminals are reconnected or No. 7 (10 A) fuse in the under-dash fuse/relay box is replaced, the power tailgate system will automatically reset. Make

sure the power tailgate operates properly.

CIRCUIT DIAGRAM

DTC TROUBLESHOOTING

DTC B1352: POWER TAILGATE CONTROL UNIT INTERNAL (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Tailgate - MDX

1. Turn the ignition switch to LOCK (0).
2. Connect the HDS to the data link connector.
3. Remove the No. 7 (10 A) fuse from the under-dash fuse/relay box.
4. Wait for 1 minute, then reinstall the No. 7 (10 A) fuse to the under-dash fuse/relay box.
5. Close the tailgate manually (not with the power tailgate switch).
6. Turn the ignition switch ON (II).
7. Check for DTCs with the HDS.

Is DTC B1352 indicated?

YES - Replace the power tailgate control unit.

NO - Intermittent failure, the power tailgate control unit is OK at this time. Check for loose or poor connections between the power tailgate control unit and the MICU.

DTC B1355: POWER TAILGATE CONTROL UNIT LOST COMMUNICATION WITH MICU (MICU MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1355 indicated?

YES - Go to Step 5.

NO - Intermittent failure, the power tailgate control unit is OK at this time. Check for loose or poor connections between the power tailgate control unit and the MICU.

5. Check for DTCs with the HDS.

Are DTCs B1055, B1157, B1160, B1255, B1955, B2155, and/or B1806 also indicated?

YES - Do the MICU input test (see **MICU INPUT TEST**).

NO - Do the power tailgate control unit input test (see **CONTROL UNIT INPUT TEST/REPLACEMENT**).

DTC B1356: POWER TAILGATE CONTROL UNIT LOST COMMUNICATION WITH DRIVER'S

MPCS UNIT (DRLOCKSW MESSAGE); DTC B1358: POWER TAILGATE CONTROL UNIT LOST COMMUNICATION WITH DRIVER'S MPCS UNIT (ASLOCKSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1356 and/or B1358 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the driver's MPCS unit.

5. Check for DTCs with the HDS.

Are DTCs B1013, B1015, B1065, B1182, and B1905 also indicated?

YES - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

NO - Do the power tailgate control unit input test (see **CONTROL UNIT INPUT TEST/REPLACEMENT**).

DTC B1357: POWER TAILGATE CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VSP/NE MESSAGE); DTC B1359: POWER TAILGATE CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (A/T MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1357 and/or B1359 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1011, B1060, B1061, B1205, B1206, B1207, B1906, B1956, and/or B2160 also indicated?

YES - Do the gauge control module input test (see GAUGE CONTROL MODULE INPUT TEST).

NO - Do the power tailgate control unit input test (see CONTROL UNIT INPUT TEST/REPLACEMENT).

DTC B1375: DRIVER'S DOOR POWER TAILGATE SWITCH CIRCUIT MALFUNCTION

NOTE: If the power tailgate motor does not operate, test the motor first.

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS.
3. Operate the driver's door power tailgate switch for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1375 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the driver's door power tailgate switch.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the 5P connector from the driver's door power tailgate switch.
7. Disconnect power tailgate control unit connector C (14P).
8. Check for continuity between the power tailgate control unit connector C (14P) No. 5 terminal and body ground.

POWER TAILGATE CONTROL
UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 6: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 5

Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair short in the wire.**NO** - Go to step 9.

9. Disconnect power tailgate control unit connector B (20P).
10. Check for continuity between the power tailgate control unit connector B (20P) No. 5 terminal and body ground.

Fig. 7: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair short in the wire.**NO** - Go to step 11.

11. Do the driver's door power tailgate switch test (see **DRIVER'S DOOR POWER TAILGATE SWITCH TEST/REPLACEMENT**).

*Is the switch OK?***YES** - Replace the power tailgate control unit.**NO** - Replace the driver's door power tailgate switch.**DTC B1376: TAILGATE OUTER HANDLE SWITCH CIRCUIT MALFUNCTION**

NOTE: If the power tailgate motor does not operate, test the motor first.

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS, and wait for 2 seconds.
3. Pull the tailgate outer handle for more than 2 seconds.
4. Check for DTCs with the HDS.

Is DTC B1376 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the power tailgate control unit and at the tailgate outer handle switch.

5. Turn the ignition switch to LOCK (0).
6. Open the power tailgate with the keyless transmitter.
7. Disconnect the 3P connector from the tailgate outer handle switch.
8. Disconnect power tailgate control unit connector C (14P).
9. Check for continuity between the power tailgate control unit connector C (14P) No. 9 terminal and body ground.

POWER TAILGATE CONTROL
UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 8: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 9 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to Step 10.

10. Disconnect power tailgate control unit connector B (20P).
11. Check for continuity between the power tailgate control unit connector B (20P) No. 5 terminal and body ground.

Fig. 9: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 5 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 12.

12. Test the tailgate outer handle switch (see **TAILGATE RELEASE ACTUATOR TEST**).

Is the switch OK?

YES - Replace the power tailgate control unit.

NO - Replace the tailgate outer handle switch.

DTC B1377: INSIDE TAILGATE SWITCH CIRCUIT MALFUNCTION

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS.
3. Open the tailgate with the keyless transmitter.
4. Push the inside tailgate switch for more than 2 seconds.
5. Check for DTCs with the HDS.

Is DTC B1377 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the inside tailgate switch.

6. Turn the ignition switch to LOCK (0).

7. Disconnect the 5P connector from the inside tailgate switch.
8. Disconnect power tailgate control unit connector C (14P).
9. Check for continuity between the power tailgate control unit connector C(14P) No. 8 terminal and body ground.

**POWER TAILGATE CONTROL
UNIT CONNECTOR C (14P)**

Wire side of female terminals

Fig. 10: Identifying Continuity Between Power Tailgate Control Unit Connector C(14P) No. 8 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 10.

10. Disconnect power tailgate control unit connector B (20P).
11. Check for continuity between the power tailgate control unit connector B (20P) No. 5 terminal and body ground.

**POWER TAILGATE CONTROL
UNIT CONNECTOR B (20P)**

Wire side of female terminals

Fig. 11: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 12.

12. Test the inside tailgate switch (see **INSIDE TAILGATE SWITCH TEST/ REPLACEMENT**).

Is the switch OK?

YES - Replace the power tailgate control unit.

NO - Replace the inside tailgate switch.

DTC B1378: POWER TAILGATE RIGHT PINCH SENSOR CIRCUIT MALFUNCTION

1. Open the tailgate manually or with the keyless transmitter.
2. Close the tailgate with the keyless transmitter or driver's door power tailgate switch.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1378 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the power tailgate right pinch sensor.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the 2P connector from the power tailgate right pinch sensor.
8. Turn the ignition switch ON (II).
9. Measure the voltage between the harness side of the power tailgate right pinch sensor 2P connector No. 2 (+) and No. 1 (-) terminals.

**POWER TAILGATE RIGHT PINCH
SENSOR 2P CONNECTOR**

Terminal side of male terminals

Fig. 12: Identifying Voltage Between Harness Side Of Power Tailgate Right Pinch Sensor 2P Connector No. 2 And No. 1 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the power tailgate right pinch sensor.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0).
11. Disconnect power tailgate control unit connector B (20P).
12. Check for continuity between the power tailgate control unit connector B (20P) No. 13 terminal and the power tailgate right pinch sensor 2P connector No. 2 terminal.

Fig. 13: Identifying Continuity Between No. 13 Terminal And No. 2 Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between the power tailgate control unit connector B (20P) No. 17 terminal and the power tailgate right pinch sensor 2P connector No. 1 terminal.

Fig. 14: Identifying Continuity Between No. 17 Terminal And No. 1 Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Repair open in the wire.

DTC B1379: POWER TAILGATE LEFT PINCH SENSOR CIRCUIT MALFUNCTION

1. Open the tailgate manually or with the keyless transmitter.
2. Close the tailgate with the keyless transmitter or driver's door power tailgate switch.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1379 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the power tailgate left pinch sensor.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the 2P connector from the power tailgate left pinch sensor.
8. Turn the ignition switch ON (II).
9. Measure the voltage between the harness side of the power tailgate left pinch sensor 2P connector No. 2 (+) and No. 1 (-) terminals.

**POWER TAILGATE LEFT PINCH
 SENSOR 2P CONNECTOR**

Terminal side of male terminals

Fig. 15: Identifying Voltage Between Harness Side Of Power Tailgate Left Pinch Sensor 2P Connector No. 2 And No. 1 Terminals

Is there battery voltage?

YES - Replace the power tailgate left pinch sensor.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0).
11. Disconnect power tailgate control unit connector B (20P).
12. Check for continuity between the power tailgate control unit connector B (20P) No. 16 terminal and the power tailgate left pinch sensor 2P connector No. 2 terminal.

Fig. 16: Identifying Continuity Between No. 16 Terminal And No. 2 Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between the power tailgate control unit connector B (20P) No. 17 terminal and the power tailgate left pinch sensor 2P connector No. 1 terminal.

Fig. 17: Identifying Continuity Between No. 17 Terminal And No. 1 Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Repair open in the wire.

DTC B1380: POWER TAILGATE CLOSER UNIT NEUTRAL SWITCH CIRCUIT MALFUNCTION

1. Open the tailgate with the tailgate outer handle.
2. Close the tailgate manually.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1380 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the power tailgate closer unit.

6. Open the tailgate with the power tailgate outer handle.
7. Turn the ignition switch to LOCK (0).
8. Disconnect the 6P connector from the power tailgate closer unit.
9. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 5 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 18: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 5 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty neutral switch, replace the power tailgate closer unit.

NO - Go to step 10.

10. Check for continuity between the power tailgate closer unit 6P connector No. 5 terminal and body ground.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 19: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate closer unit.

NO - Go to step 11.

11. Disconnect power tailgate control unit connector C (UP).
12. Check for continuity between the power tailgate control unit connector C (14P) No. 3 terminal and body ground.

POWER TAILGATE CONTROL UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 20: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 13.

13. Turn the tailgate lock latch to the fully-closed position using a screwdriver.
14. Disconnect power tailgate control unit connector B (20P).
15. Connect battery power to the power tailgate control unit connector B (20P) No. 2 terminal and ground the No. 1 terminal momentarily. (The motor should run in the release direction.)

Fig. 21: Identifying Battery Power To Power Tailgate Control Unit Connector B (20P) No. 2 Terminal And Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check for continuity between the power tailgate control unit connector C (14P) No. 3 and No. 11 terminals.

Wire side of female terminals

Fig. 22: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 3 And No. 11 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Go to step 17.

17. Disconnect the 6P connector from the power tailgate closer unit.
18. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 5 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 23: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 5 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the wire between the power tailgate closer unit and power tailgate control unit.

NO - Replace the power tailgate closer unit.

DTC B1381: POWER TAILGATE CLOSER UNIT RELEASE SWITCH CIRCUIT MALFUNCTION

1. Open the tailgate with the tailgate outer handle switch.
2. Close the tailgate manually.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1381 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the tailgate closer unit.

6. Open the tailgate with the tailgate outer handle.
7. Turn the ignition switch to LOCK (0).
8. Disconnect the 6P connector from the power tailgate closer unit.
9. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 6 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 24: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty release switch, replace the power tailgate closer unit.

NO - Go to step 10.

10. Check for continuity between the power tailgate closer unit 6P connector No. 6 terminal and body ground.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 25: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate closer unit.

NO - Go to step 11.

11. Disconnect power tailgate control unit connector C (14P).
12. Check for continuity between the power tailgate control unit connector C (14P) No. 4 terminal and body ground.

Fig. 26: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 4 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 13.

13. Turn the tailgate lock latch to the fully-closed position using a screwdriver.
14. Disconnect power tailgate control unit connector B (20P).
15. Connect battery power to the power tailgate control unit connector B (20P) No. 2 terminal and ground the No. 1 terminal momentarily. (The motor should run in the release direction.)

Fig. 27: Identifying Battery Power To Power Tailgate Control Unit Connector B (20P) No. 2 Terminal And Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check for continuity between the power tailgate control unit connector C (14P) No. 4 and No. 11 terminals.

**POWER TAILGATE CONTROL
UNIT CONNECTOR C (14P)**

Wire side of female terminals

Fig. 28: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 4 And No. 11 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Go to step 17.

17. Disconnect the 6P connector from the power tailgate closer unit.

18. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 6 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 29: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the wire between the power tailgate closer unit and power tailgate control unit.

NO - Replace the power tailgate closer unit.

**DTC B1382: POWER TAILGATE CLOSER UNIT FULL LATCH SWITCH CIRCUIT
MALFUNCTION**

1. Open the tailgate with the tailgate outer handle.
2. Close the tailgate manually.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for the DTCs with the HDS.

Is DTC B1382 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the power tailgate closer unit.

6. Open the tailgate with the tailgate outer handle.
7. Turn the ignition switch to LOCK (0).
8. Turn the tailgate lock latch to the fully-closed position using a screwdriver.
9. Disconnect the 6P connector from the power tailgate closer unit.
10. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 2 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 30: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty full latch switch, replace the power tailgate closer unit.

NO - Go to step 11.

11. Check for continuity between the power tailgate closer unit 6P connector No. 2 terminal and body ground.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 31: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate closer unit.

NO - Go to step 12.

12. Disconnect power tailgate control unit connector C (14P).
13. Check for continuity between the power tailgate control unit connector C (14P) No. 2 terminal and body ground.

POWER TAILGATE CONTROL UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 32: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire between the power tailgate control unit and the rear fuse/ relay box or between the rear fuse/relay box and the power tailgate closer unit. If the wire harness are OK, replace the MICU-rear junction box.

NO - Go to step 14.

14. Turn the tailgate emergency lever to release the tailgate lock latch from the fully-locked position to release position.
15. Check for continuity between the power tailgate control unit connector C (14P) No. 2 and No. 11 terminals.

Wire side of female terminals

Fig. 33: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 2 And No. 11 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Go to step 16.

16. Disconnect the 6P connector from the power tailgate closer unit.
17. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 2 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 34: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the wire between the power tailgate closer unit and power tailgate control unit.

NO - Replace the power tailgate closer unit.

DTC B1383: POWER TAILGATE CLOSER UNIT RATCHET SWITCH CIRCUIT MALFUNCTION

1. Open the tailgate with the tailgate outer handle.
2. Close the tailgate manually.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1383 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the power tailgate closer unit.

6. Open the tailgate with the tailgate outer handle.
7. Turn the ignition switch to LOCK (0).
8. Disconnect the 6P connector from the power tailgate closer unit.
9. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 4 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 35: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 4 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty ratchet switch, replace the power tailgate closer unit.

NO - Go to step 10.

10. Check for continuity between the power tailgate closer unit 6P connector No. 4 terminal and body ground.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 36: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate closer unit.

NO - Go to step 11.

11. Disconnect power tailgate control unit connector C (UP).
12. Check for continuity between the power tailgate control unit connector C (14P) No. 10 terminal and body ground.

POWER TAILGATE CONTROL UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 37: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 10 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Go to step 13.

13. Turn the tailgate lock latch to the fully-locked position using a screwdriver.

14. Turn the tailgate emergency lever to release the tailgate lock latch from the fully-locked position to release position.
15. Check for continuity between the power tailgate control unit connector C (14P) No. 10 and No. 11 terminals.

POWER TAILGATE CONTROL UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 38: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 10 And No. 11 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Go to step 16.

16. Disconnect the 6P connector from the power tailgate closer unit.
17. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 4 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 39: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 4 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the wire between the power tailgate closer unit and power tailgate control unit.

NO - Replace the power tailgate closer unit.

DTC B1384: POWER TAILGATE CLOSER UNIT HALF LATCH SWITCH CIRCUIT MALFUNCTION

1. Open the tailgate with the tailgate outer handle.
2. Close the tailgate manually.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1384 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the tailgate closer unit.

6. Open the tailgate with the tailgate outer handle.
7. Turn the ignition switch to LOCK (0).
8. Turn the tailgate lock latch to the fully-closed position using a screwdriver.
9. Disconnect the 6P connector from the power tailgate closer unit.
10. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 3 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 40: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty half latch switch, replace the power tailgate closer unit.

NO - Go to step 11.

11. Check for continuity between the power tailgate closer unit 6P connector No. 3 terminal and body

ground.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 41: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate closer unit.

NO - Go to step 12.

12. Disconnect power tailgate control unit connector C (14P).
13. Check for continuity between the power tailgate control unit connector C (14P) No. 1 terminal and body ground.

POWER TAILGATE CONTROL UNIT CONNECTOR C (14P)

Wire side of female terminals

Fig. 42: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 14.

14. Turn the emergency lever of the tailgate and release the tailgate lock latch from the fully-locked position.
15. Check for continuity between the power tailgate control unit connector C (14P) No. 1 and No. 11 terminals.

Fig. 43: Identifying Continuity Between Power Tailgate Control Unit Connector C (14P) No. 1 And No. 11 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Go to step 16.

16. Disconnect the 6P connector from the power tailgate closer unit.
17. Check for continuity between the power tailgate closer unit 6P connector No. 1 and No. 3 terminals.

POWER TAILGATE CLOSER UNIT 6P CONNECTOR

Terminal side of male terminals

Fig. 44: Identifying Continuity Between Power Tailgate Closer Unit 6P Connector No. 1 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the wire between the power tailgate closer unit and power tailgate control unit.

NO - Replace the power tailgate closer unit.

DTC B1386: POWER TAILGATE SENSOR PULSE A CIRCUIT MALFUNCTION

NOTE: If the motor does not operate, do the power tailgate motor test (see POWER TAILGATE MOTOR TEST).

1. Open the tailgate with the tailgate outer handle.
2. Close the tailgate automatically with the keyless transmitter or inside tailgate switch.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1386 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the drive unit.

6. Turn the ignition switch to LOCK (0).
7. Connect the voltmeter to the power tailgate control unit connector B (20P) No. 14 and No. 18 terminals.
8. Measure the voltage between the power tailgate control unit connector B (20P) No. 14 and No. 18 terminals while the tailgate is opening and closing with the keyless transmitter or inside tailgate switch.

Fig. 45: Identifying Voltage Between Power Tailgate Control Unit Connector B (20P) No. 14 And No. 18 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does it alternate between about 0 V and 5 V? NOTE: Digital voltmeter will read about 2.5 V.

YES - Replace the power tailgate control unit.

NO - Go to step 9.

9. Disconnect power tailgate control unit connector B (20P).

10. Disconnect the 8P connector from the drive unit.
11. Check for continuity between the power tailgate control unit connector B (20P) No. 14 terminal and body ground.

Fig. 46: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 14 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 12.

12. Check for continuity between the power tailgate control unit connector B (20P) No. 14 and No. 18 terminals and drive unit connector B (8P) No. 5 and No. 8 terminals respectively.

Fig. 47: Identifying Continuity Between No. 14 And No. 18 Terminals And No. 5 And No. 8 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty power tailgate sensor A, replace the drive unit.

NO - Repair open in the wire.

DTC B1387: POWER TAILGATE SENSOR PULSE B CIRCUIT MALFUNCTION

NOTE: If the motor does not operate, do the power tailgate motor test (see POWER TAILGATE MOTOR TEST).

1. Open the tailgate with the tailgate outer handle.
2. Close the tailgate automatically with the keyless transmitter or inside tailgate switch.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1387 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the drive unit.

6. Turn the ignition switch to LOCK (0).
7. Connect the voltmeter to the power tailgate control unit B connector (20P) No. 15 and No. 18 terminals.
8. Measure the voltage between the power tailgate control unit connector B (20P) No. 15 and No. 18 terminals while the tailgate is opening and closing with the keyless transmitter or inside tailgate switch.

Wire side of female terminals

Fig. 48: Identifying Voltage Between Power Tailgate Control Unit Connector B (20P) No. 15 And No. 18 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does it alternate between about 0 V and 5 V?

NOTE: Digital voltmeter will read about 2.5 V.

YES - Replace the power tailgate control unit.

NO - Go to step 9.

9. Disconnect power tailgate control unit connector B (20P).
10. Disconnect the 8P connector from the drive unit.
11. Check for continuity between the power tailgate control unit connector B (20P) No. 15 terminal and body ground.

Fig. 49: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 15 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 12.

12. Check for continuity between the power tailgate control unit connector B (20P) No. 15 and No. 18 terminals and drive unit connector B (8P) No. 6 and No. 8 terminals.

Fig. 50: Identifying Continuity Between No. 15 And No. 18 Terminals And No. 6 And No. 8 Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty power tailgate sensor B, replace the drive unit.

NO - Repair open in the wire.

DTC B1388: POWER TAILGATE MOTOR CIRCUIT MALFUNCTION

1. Open the tailgate.
2. Close the tailgate automatically with the keyless transmitter or inside tailgate switch.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1388 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the drive unit.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the 2P connector from the drive unit.
8. Check for continuity between the power tailgate control unit connector A (5P) No. 3 and No. 5 terminals and body ground respectively.

**POWER TAILGATE CONTROL UNIT
CONNECTOR A (5P)**

Wire side of female terminals

Fig. 51: Identifying Continuity Between Power Tailgate Control Unit Connector A (5P) No. 3 And No. 5 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 9.

9. Connect battery power to the power tailgate control unit connector A (5P) No. 3 (or No. 5) terminal and ground the No. 5 or (No. 3) terminal.

POWER TAILGATE CONTROL UNIT CONNECTOR A (5P)

Wire side of female terminals

Fig. 52: Identifying Battery Power To No. 3 (Or No. 5) Terminal And Ground No. 5 Or (No. 3) Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Check the power tailgate motor operation.

Does the motor run normally?

YES - Go to step 11.

NO - Faulty power tailgate motor, replace the drive unit.

10. Disconnect power tailgate control unit connector B (20P).
11. Check for continuity between the power tailgate control unit connector B (20P) No. 9 and No. 20 terminals and body ground respectively.

POWER TAILGATE CONTROL UNIT CONNECTOR B (20P)

Wire side of female terminals

Fig. 53: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 9 And No. 20 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 13.

12. Connect battery power to the power tailgate control unit connector B (20P) No. 9 terminal and ground the No. 20 terminal. Check for clutch operation.

Wire side of female terminals

Fig. 54: Identifying Battery Power To Power Tailgate Control Unit Connector B (20P) No. 9 Terminal And Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Can you hear the clutch operate?

YES - Go to step 14.

NO - Faulty power tailgate clutch, replace the drive unit.

13. Measure the voltage between the power tailgate control unit connector A (5P) No. 2 terminal and body ground.

Wire side of female terminals

Fig. 55: Identifying Voltage Between Power Tailgate Control Unit Connector A (5P) No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 15.

NO - Check the No. 11 (40 A) fuse in the rear fuse/ relay box. If the fuse is OK, check for an open in the wire between the rear fuse/relay box and the power tailgate control unit.

14. Measure the voltage between the power tailgate control unit connector B (20P) No. 12 terminal and body ground.

Fig. 56: Identifying Voltage Between Power Tailgate Control Unit Connector B (20P) No. 12 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 16.

NO - Check the No. 6 (20 A) fuse in the rear fuse/ relay box. If the fuse is OK, check for an open in the wire between the rear fuse/relay box and the power tailgate control unit.

15. Check for continuity between the power tailgate control unit connector A (5P) No. 1 and No. 4 terminals and body ground respectively.

Fig. 57: Identifying Continuity Between Power Tailgate Control Unit Connector A (5P) No. 1 And No. 4 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tailgate control unit.

NO - Repair open in the wire or poor ground (G701, G702).

DTC B1389: POWER TAILGATE MOTOR CLUTCH CIRCUIT MALFUNCTION

1. Open the tailgate.
2. Close the tailgate automatically with the keyless transmitter or inside tailgate switch.
3. Turn the ignition switch to LOCK (0), and then back ON (II).
4. Clear the DTCs with the HDS.
5. Check for DTCs with the HDS.

Is DTC B1389 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the drive unit.

6. Turn the ignition switch to LOCK (0).
7. Open the tailgate.
8. Disconnect power tailgate control unit connector B (20P).
9. Check for continuity between the power tailgate control unit connector B (20P) No. 9 and No. 20 terminals and body ground respectively.

Fig. 58: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 9 And No. 20 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire. If the wire is OK, replace the drive unit.

NO - Go to step 10.

10. Measure the voltage between the power tailgate control unit connector B (20P) No. 12 terminal and body ground.

Fig. 59: Identifying Voltage Between Power Tailgate Control Unit Connector B (20P) No. 12 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the power tailgate control unit.

NO - Check the No. 11 (20 A) fuse in the rear fuse/ relay box. If the fuse is OK, check for an open in the wire between the rear fuse/relay box and the power tailgate control unit.

DTC B1390: POWER TAILGATE CLOSER FUNCTION ERROR

1. With the tailgate closed, pull the tailgate outer handle and wait for 10 seconds.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Clear the DTCs with the HDS.
4. Listen for the sound of the latch releasing.

Is there sound?

YES - Go to step 5.

NO - Go to Step 7.

5. Check for DTCs with the HDS.

Is DTC B1390 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the closer motor.

6. Check for DTCs with the HDS.

Are DTCs B1380, B1381, B1382, B1383, and/or B1384 also indicated?

YES - Troubleshoot the indicated DTCs.

NO - Replace the power tailgate control unit and recheck the system.

7. Turn the ignition switch to LOCK (0).
8. Open the tailgate.
9. Disconnect the 2P connector from the power tailgate closer motor.
10. Disconnect power tailgate control unit connector B (20P).
11. Check for continuity between the power tailgate control unit connector B (20P) No. 1 and No. 2 terminals and the power tailgate closer motor 2P connector No. 1 and No. 2 terminals respectively.

POWER TAILGATE CLOSER MOTOR 2P CONNECTOR

Fig. 60: Identifying Continuity Between No. 1 And No. 2 Terminals And No. 1 And No. 2 Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the wire.

12. Measure the voltage between the power tailgate control unit connector B (20P) No. 12 terminal and body ground.

Fig. 61: Identifying Voltage Between Power Tailgate Control Unit Connector B (20P) No. 12 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 14.

NO - Check for No. 6 (20 A) fuse in the rear fuse/ relay box. If the fuse is OK, check for an open in the wire between the rear fuse/relay box and power tailgate control unit.

13. Disconnect power tailgate control unit connector A (5P).
14. Check for continuity between the power tailgate control unit connector A (5P) No. 4 terminal and body ground.

Fig. 62: Identifying Continuity Between Power Tailgate Control Unit Connector A (5P) No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair open in the wire or poor ground (G701).

15. Turn the tailgate lock latch to the fully-closed position using a screwdriver.
16. Reconnect the power tailgate closer motor 2P connector.

17. Connect battery power to the power tailgate control unit connector B (20P) No. 2 (or No. 1) terminal and ground the No. 1 (or No. 2) terminal momentarily.

Fig. 63: Identifying Battery Power To Power Tailgate Control Unit Connector B (20P) No. 2 (Or No. 1) Terminal And Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the motor run smoothly?

YES - Replace the power tailgate control unit.

NO - Go to step 18.

18. Reconnect the 6P connector to the power tailgate closer unit.
19. Check for continuity between the power tailgate control unit connector B (20P) No. 1 and No. 2 terminals and body ground respectively.

Fig. 64: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 1 And No. 2 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Go to step 22.

20. Disconnect the 6P connector from the power tailgate closer unit.
21. Check for continuity between the power tailgate control unit connector B (20P) No. 1 and No. 2 terminals and body ground respectively.

Fig. 65: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 1 And No. 2 Terminals And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Replace the power tailgate closer unit.

22. Check for continuity between the power tailgate control unit connector B (20P) No. 9 terminal and body ground.

Fig. 66: Identifying Continuity Between Power Tailgate Control Unit Connector B (20P) No. 9 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Check for No. 6 (20 A) fuse in the rear fuse/ relay box. If the fuse is OK, check for an open in the wire between the rear fuse/relay box and power tailgate control unit.

CONTROL UNIT INPUT TEST/REPLACEMENT

NOTE: Before testing the power tailgate control unit, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Turn the ignition switch to LOCK (0).
2. Remove the left rear pillar trim (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA).
3. Disconnect power tailgate control unit connectors A (5P), B (20P), and C (14P).

Fig. 67: Identifying Power Tailgate Control Unit Connectors A (5P), B (20P), And C (14P) With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect all the connector and socket terminals to be sure they are all making good contact.

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Power Tailgate - MDX**

- If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
- If any test indicates a problem, find and correct the cause, then recheck the system.
 - If the input tests prove OK, go to step 5.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
B3	RED	Under all conditions	Connect B10 and B3 terminals with a jumper wire: The beeper should sound.	• Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty beeper • Poor ground(G701) • An open in the wire

6. Reconnect all connectors to the power tailgate control unit, and make these input tests at the appropriate connector.
- If the test indicates a problem, find and correct the cause, then recheck the system.
 - If the input test proves OK, replace the power tailgate control unit.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A2	BRN	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 11 (40 A) fuse in the rear fuse/relay box • An open in the wire
B12	PNK	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 6 (20 A) fuse in the rear fuse/relay box • Blown No. 3 (60 A) fuse in the under-hood fuse/relay box • An open in the wire
B10	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Blown No. 15 (40 A) fuse in the under-hood fuse/relay box • An open in the wire
C14	YEL	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • An open in the wire

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Tailgate - MDX

A1	BRN	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground(G701) • An open in the wire
A4	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground(G701, G702) • An open in the wire
B19				
B8	GRN	Shift lever in P position	Measure the voltage to ground: There should be less than 1 V.	• Faulty transmission range switch • Poor ground (G101, G102) • An open in the wire

7. Reset the power tailgate control unit (see **RESETTING THE POWER TAILGATE CONTROL UNIT**).

POWER TAILGATE MOTOR TEST

1. Open the tailgate and remove the left rear pillar trim (see **QUARTER PILLAR TRIM**).
2. Disconnect the 2P connector (A) from the power tailgate motor (B).

Fig. 68: Identifying 2P Connector And Power Tailgate Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Close the tailgate manually.
4. Check the motor operation by connecting battery power to the No. 1 terminal and ground to the No. 2 terminal. The motor should run (tailgate open).

NOTE: Be careful not to pinch your hands.

5. After opening the tailgate, connect battery power to the No. 2 terminal and ground the No. 1 terminal. The motor should run (tailgate closed).
6. If the motor does not run or fails to run smoothly, replace the drive unit assembly (see **DRIVE UNIT REPLACEMENT**).

POWER TAILGATE INSIDE BEEPER TEST/ REPLACEMENT

1. Open the tailgate and remove the left rear pillar trim (see **QUARTER PILLAR TRIM**).
2. Disconnect the 8P connector (A) from the power tailgate drive unit (B).

Fig. 69: Identifying 8P Connector And Power Tailgate Drive Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the beeper by connecting battery power to the No. 2 terminal and ground to the No. 7 terminal. The beeper should sound.
4. If the beeper does not sound, disconnect the 2P connector (A) and check for an open in the wire between the 2P connector and the 8P connector. If the wire harness is OK, replace the beeper (B).

Fig. 70: Identifying 2P Connector And Beeper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVER'S DOOR POWER TAILGATE SWITCH TEST/REPLACEMENT

1. Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 7P connector (A) from the fuel fill door opener/driver's door power tailgate switch (B), then push the switch out from behind the door panel.

Fig. 71: Identifying 7P Connector And Door Opener/Driver'S Door Power Tailgate Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.

Terminal Position	5	6	4		7
ON	○	○	○	⊕	○
OFF					

Fig. 72: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the continuity is not as specified, replace the bulbs (C) or the switch.

INSIDE TAILGATE SWITCH TEST/ REPLACEMENT

- Carefully pry out the inside tailgate switch (A), and disconnect the 5P connector (B) from switch.

Fig. 73: Identifying Inside Tailgate Switch And 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Check for continuity between the terminals in each switch position according to the table.

Terminal Position	1	2	3		4
ON	○	○	○	⊕	○
OFF					

Fig. 74: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the continuity is not as specified, replace the bulbs (C) or the switch.

POWER TAILGATE LATCH/RATCHET SWITCH TEST

1. Remove the tailgate trim panel (see TRIM REMOVAL/INSTALLATION - TAILGATE AREA).
2. Disconnect the 6P connector (A) from the tailgate closer unit (B).

Fig. 75: Identifying 6P Connector And Tailgate Closer Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each latch position according to the table.

Terminal Position	1	4	2	3
Full latched	○	○		
Between the fully-latched position to released position	○	○	○	
Released	○		○	○

Fig. 76: Checking For Continuity Between Terminals In Each Switch Position
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the tailgate latch assembly (see WITHOUT POWER TAILGATE).

POWER TAILGATE CLOSER MOTOR TEST

1. Remove the tailgate trim panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. Disconnect the 2P connector (A) from the closer motor (B).

Fig. 77: Identifying 2P Connector And Closer Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check motor operation by connecting battery power to the tailgate closer unit 2P connector No. 2 terminal and ground to the No. 1 terminal. To prevent damage to the motor, apply battery voltage only momentarily. The motor should run.
4. If the motor does not run or fails to run smoothly, replace the tailgate latch assembly (see **WITHOUT POWER TAILGATE**).

DRIVE UNIT REPLACEMENT

1. Remove the rear pillar trim (see **QUARTER PILLAR TRIM**).
2. Disconnect the 2P and 8P connectors (A) from the drive unit (B).

Fig. 78: Identifying 2P, 8P Connectors And Drive Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully remove the bolts and support strut (C) from the tailgate.
4. Remove the mounting bolts and drive unit.
5. Install in the reverse order of removal.

PINCH SENSOR REPLACEMENT

1. Open the tailgate.
2. Remove the clips, screws and nuts from the pinch sensor (A).

NOTE: **The illustration shows left side pinch sensor, right side is symmetrical.**

Fig. 79: Identifying Pinch Sensor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (B) from the pinch sensor.
4. Install in the reverse order of removal.

Power Windows - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Power Windows Component Location (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Windows - MDX

Fig. 2: Identifying Power Windows Component Location (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

ANTI-PINCH POWER WINDOW OPERATION

The system is composed of the driver's MPCS unit, front passenger's MPCS unit, power window master switch, passenger's switches, and power window motors.

The power window motor incorporates a pulser which generates pulses during the motor's operation and sends pulses to the driver's and front passenger's MPCS units. As soon as the power window control unit detects a change in the pulse frequency from the pulser, the power window control unit makes the power window motor stop and reverse. This is prevent pinching your hand or fingers during auto-up operation.

Fig. 3: Blinking Pattern - Anti Pinch Power Window
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Key Cylinder Operation

With the key inserted in the driver's door key cylinder, turn the key a second time within 15 seconds and hold it to operate the windows and moonroof (clockwise to open, counterclockwise to close). The windows and moonroof stop moving when the key is released. The anti-pinch operation is not active when closing the windows and moonroof with the key cylinder.

Keyless Operation

By pressing and holding the UNLOCK button of the keyless transmitter a second time within 15 seconds, the windows and moonroof open. The windows and moonroof stop moving when the UNLOCK button is released. The windows do not close with the LOCK button.

RESETTING THE POWER WINDOW CONTROL UNIT

Resetting the power window control unit is required when any of the following have occurred:

- Power window regulator replacement or repair.
- Power window motor replacement or repair.
- Window run channel replacement.
- Door glass replacement or repair.
- Driver's MPCS unit replacement.
- Front passenger's MPCS unit replacement.
- Power is removed from the Driver's or front passenger's MPCS unit while the power window timer is ON.

NOTE: **If the passenger's window has lost power when the key off timer is ON, it cannot be operated from the driver's switch and must be reset from the passenger's power window switch.**

USING THE HDS

1. Connect the HDS to the data link connector.
2. Turn the ignition switch ON (II), then enter the vehicle's VIN and mileage at the prompts.
3. Select "BODY ELECTRICAL" from the "SYSTEM SELECT" menu.
4. From the "BODY ELECTRICAL SYSTEM SELECT" menu, select "POWER WINDOWS".
5. From the "MODE" menu, select "ADJUSTMENTS".
6. From the "ADJUSTMENT" menu, select "WINDOW PRESET" for driver's side (passenger's side) window.
7. Follow the prompts on the screen.
8. Confirm that the power window control unit is reset by using the window AUTO UP and AUTO DOWN function.

WITHOUT THE HDS

- NOTE:**
- **To start the reset procedure, do the driver's power window master switch first (steps 1-8), then do the passenger's power window switch (steps 9-11) if equipped.**
 - **Do each bulleted item in step 4 within 5 seconds of each other.**

Driver's Power Window

1. Turn the ignition switch ON (II).
2. Move the window all the way down by using the window DOWN switch.
3. Open the driver's door.
4. Do the following 3 times before going to step 5:
 - Turn the ignition switch to LOCK (0).
 - Push and hold the window DOWN switch.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Windows - MDX

- Turn the ignition switch ON (II).
 - Release the window DOWN switch.
5. Confirm that AUTO UP no longer works. If AUTO UP still works, go back to step 1.
 6. Move the window all the way down using the window DOWN switch.
 7. Pull up and hold the window UP switch until the window is all the way up, then continue to hold the switch for 1 second.
 8. Confirm that the power window control unit is reset by using the window AUTO UP and AUTO DOWN function.

If the window still does not work in AUTO, repeat the procedure several times, paying close attention to the 5 second time limit between steps. If it still does not work, go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

Front Passenger's Power Window (if equipped)

9. Move the front passenger's window all the way down using the front passenger's power window DOWN switch.
10. Pull up and hold the front passenger's power window UP switch until the front passenger's power window is all the way up, then continue to hold the switch for 1 second.
11. Confirm that the power window control unit is reset by using the front passenger's power window AUTO UP and DOWN function.

DTC TROUBLESHOOTING

DTC B2175: DRIVER'S POWER WINDOW MOTOR PULSE A ERROR

NOTE:

If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Windows - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the driver's power window by using the power window master switch manually.
4. Check for DTCs with the HDS.

Is DTC B2175 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Open and close the driver's power window by using the power window master switch manually.

Does the window motor operate?

YES - Go to step 6.

NO - Test the driver's power window motor (see **DRIVER'S POWER WINDOW MOTOR TEST**).

6. Select the POWER WINDOWS from the BODY ELECTRICAL system select menu and enter the DATA LIST.
7. Check the DETECT/NONE information of the Driver's window motor A-phase pulse signal in the DATA LIST.

Does the information indicator display DETECT while the window is moving, and display NONE when the window is stopped?

YES - Replace the driver's MPCS unit.

NO - Go to step 8.

8. Check for DTCs with the HDS.

Is DTC B2176 also indicated?

YES - Go to step 15.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect driver's MPCS unit connector B (14P).
11. Disconnect the 6P connector from the driver's power window motor.
12. Check for continuity between driver's MPCS unit connector B (14P) No. 5 terminal and driver's power window motor 6P connector No. 4 terminal.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

DRIVER'S MPCS UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 7: Identifying Continuity Between Driver's MPCS Unit Connector Terminal 5
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between driver's power window motor 6P connector No. 4 terminal and body ground.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 8: Identifying Continuity Between Driver's Power Window Motor 6P Connector Terminal 4
And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Replace the driver's power window.

14. Test the driver's power window motor (see **DRIVER'S POWER WINDOW MOTOR TEST**).

Is the motor OK?

YES - Replace the driver's MPCS unit.

NO - Replace the driver's power window motor.

15. Check for continuity between the driver's MPCS unit connector B (14P) No. 3 and No. 6 terminals and the driver's power window motor 6P connector No. 1 and No. 2 terminals respectively.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

DRIVER'S MPCS UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 9: Identifying Continuity Between Driver's MPCS Unit B (14P) Connector Terminals 3 And 6
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 16.

NO - Repair an open in the wire.

16. Check for continuity between the driver's power window motor 6P connector No. 1 terminal and body ground.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 10: Identifying Continuity Between Driver's Power Window Motor 6P Connector Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Replace the driver's power window motor.

DTC B2176: DRIVER'S POWER WINDOW MOTOR PULSE B ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the driver's power window by using the power window master switch manually.
4. Check for DTCs with the HDS.

Is DTC B2176 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Open and close the driver's power window by using the power window master switch manually.

Does the window motor operate?

YES - Go to step 6.

NO - Test the driver's power window motor (see **DRIVER'S POWER WINDOW MOTOR TEST**).

6. Select the POWER WINDOWS from the BODY ELECTRICAL system select menu and enter the DATA LIST.
7. Check the DETECT/NONE information of the Driver's window motor B-phase pulse signal in the DATA LIST.

Does the information indicator display DETECT while the window is moving, and display NONE when the window is stopped?

YES - Replace the driver's MPCS unit.

NO - Go to step 8.

8. Check for DTCs with the HDS.

Is DTC B2175 also indicated?

YES - Go to step 15.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect driver's MPCS unit connector B (HP).
11. Disconnect the 6P connector from the driver's power window motor.
12. Check for continuity between driver's MPCS unit connector B (14P) No. 4 terminal and driver's power window motor 6P connector No. 5 terminal.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

DRIVER'S MPCS UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 11: Identifying Continuity Between Driver's MPCS Unit B (14P) Connector Terminal 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between driver's power window motor 6P connector No. 5 terminal and body ground.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 12: Identifying Continuity Between Driver's Power Window Motor 6P Connector Terminal 5 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 14.

14. Test the driver's power window motor (see **DRIVER'S POWER WINDOW MOTOR TEST**).

Is the motor OK?

YES - Replace the driver's MPCS unit.

NO - Replace the driver's power window motor.

15. Check for continuity between the driver's MPCS unit connector B (14P) No. 3 and No. 6 terminals and the driver's power window motor 6P connector No. 1 and No. 2 terminals respectively.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 13: Identifying Continuity Between Driver's MPCS Unit B (14P) Connector Terminals 3 And 6
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 16.

NO - Repair open in the wire.

16. Check for continuity between the driver's power window motor 6P connector No. 1 terminal and body ground.

DRIVER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 14: Identifying Continuity Between Driver's Power Window Motor 6P Connector Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repairs short to ground in the wire.

NO - Replace the driver's power window motor.

DTC B2177: FRONT PASSENGER'S POWER WINDOW MOTOR PULSE A ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the front passenger's power window by using the front passenger's power window switch manually.
4. Check for DTCs with the HDS.

Is DTC B2177 indicated?

YES - Go to step 5.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Windows - MDX

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Open and close the front passenger's power window by using the power window master switch manually.

Does the window motor operate?

YES - Go to step 6.

NO - Test the front passenger's power window motor (see **FRONT PASSENGER'S POWER WINDOW MOTOR TEST**).

6. Select the POWER WINDOWS from the BODY ELECTRICAL system select menu and enter the DATA LIST.
7. Check the DETECT/NONE information of the Front passenger's window motor A-phase pulse signal in the DATA LIST.

Does the information indicator display DETECT while the window is moving, and display NONE when the window is stopped?

YES - Replace the front passenger's MPCS unit.

NO - Go to step 8.

8. Check for DTCs with the HDS.

Is DTC B2178 also indicated?

YES - Go to step 15.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect front passenger's MPCS unit connector B(14P).
11. Disconnect the 6P connector from the passenger's power window motor.
12. Check for continuity between front passenger's MPCS unit connector B (14P) No. 5 terminal and front passenger's power window motor 6P connector No. 3 terminal.

FRONT PASSENGER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Replace the front passenger's power window motor.

DTC B2178: FRONT PASSENGER'S POWER WINDOW MOTOR PULSE B ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the front passenger's power window by using the front passenger's power window switch manually.
4. Check for DTCs with the HDS.

Is DTC B2178 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Open and close the front passenger's power window by using the power window master switch manually.

Does the window motor operate?

YES - Go to step 6.

NO - Test the front passenger's power window motor (see **FRONT PASSENGER'S POWER**

WINDOW MOTOR TEST).

6. Select the POWER WINDOWS from the BODY ELECTRICAL system select menu and enter the DATA LIST.
7. Check the DETECT/NONE information of the Front passenger's window motor B-phase pulse signal in the DATA LIST.

Does the information indicator display DETECT while the window is moving, and display NONE when the window is stopped?

YES - Replace the front passenger's MPCS unit.

NO - Go to step 8.

8. Check for DTCs with the HDS.

Is DTC B2177 also indicated?

YES - Go to step 15.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect front passenger's MPCS unit connector B(14P).
11. Disconnect the 6P connector from the passenger's power window motor.
12. Check for continuity between front passenger's MPCS unit connector B (14P) No. 4 terminal and front passenger's power window motor 6P connector No. 2 terminal.

Fig. 19: Identifying Continuity Between Front Passenger's MPCS Unit B (14P) Connector Terminal

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between front passenger's power window motor 6P connector No. 2 terminal and body ground.

FRONT PASSENGER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 20: Identifying Continuity Between Front Passenger's Power Window Motor Connector Terminal 2 And Body Ground

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 14.

14. Test the front passenger's power window motor (see **FRONT PASSENGER'S POWER WINDOW MOTOR TEST**).

Is the motor OK?

YES - Replace the front passenger's MPCS unit.

NO - Replace the front passenger's power window motor.

15. Check for continuity between the front passenger's MPCS unit connector B (14P) No. 3 and No. 6 terminals and the front passenger's power window motor 6P connector No. 5 and No. 6 terminals respectively.

FRONT PASSENGER'S POWER WINDOW MOTOR 6P CONNECTOR

FRONT PASSENGER'S MPCS UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 21: Identifying Continuity Between Front Passenger's MPCS Unit B (14P) Connector Terminals 3 And 6

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 16.

NO - Repair open in the wire.

16. Check for continuity between the front passenger's power window motor 6P connector No. 6 terminal and body ground.

FRONT PASSENGER'S POWER WINDOW MOTOR 6P CONNECTOR

Wire side of female terminals

Fig. 22: Identifying Continuity Between Front Passenger's Power Window Motor Connector Terminal 6 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Replace the front passenger's power window motor.

DTC B2187: COMMUNICATION LINE (UART LINE) DRIVER'S MPCS UNIT CANNOT SEND UART MESSAGES.

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Check for DTCs with the HDS.

Is DTC B2187 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Turn the ignition switch to LOCK (0).
5. Disconnect front passenger's MPCS unit connector A(28P).
6. Turn the ignition switch ON (II).
7. Clear the DTCs with the HDS.
8. Turn the ignition switch to LOCK (0), and then back ON (II).
9. Check for DTCs with the HDS.

Is DTC B2187 indicated?

YES - Go to step 10.

NO - Do the front passenger's MPCS unit input test, step No. 6. If OK, replace the front passenger's MPCS unit.

10. Turn the ignition switch to LOCK (0).
11. Disconnect the moonroof control unit/motor 10P connector.
12. Turn the ignition switch ON (II).
13. Clear the DTCs with the HDS.
14. Turn the ignition switch to LOCK (0), and then back ON (II).
15. Check for DTCs with the HDS.

Is DTC B2187 indicated?

YES - Go to step 16.

NO - Replace the moonroof control unit/motor.

16. Turn the ignition switch to LOCK (0).
17. Disconnect driver's MPCS unit connector A (40P).
18. Check for continuity between the driver's MPCS unit connector A (40P) No. 8 terminal and body ground.

Fig. 23: Identifying Continuity Between Driver's MPCS Unit A (40P) Connector Terminal 8 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 19.

19. Turn the ignition switch ON (II).
20. Measure the voltage between the driver's MPCS unit connector A (40P) No. 8 terminal and body ground.

Fig. 24: Identifying Voltage Between Driver's MPCS Unit A (40P) Connector Terminal 8 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair short to power in the wire.

NO - Replace the driver's MPCS unit.

DTC B2188: COMMUNICATION LINE (UART LINE) DRIVER'S MPCS UNIT CANNOT RECEIVE UART MESSAGES FROM FRONT PASSENGER'S MPCS UNIT.

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the driver's and front passenger's windows by operating the power window master switch.
4. Check for DTCs with the HDS.

Is DTC B2188 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0).
6. Disconnect driver's MPCS unit connector A (40P).
7. Disconnect front passenger's MPCS unit connector A (28P).
8. Check for continuity between the driver's MPCS unit connector A (40P) No. 8 terminal and the front passenger's MPCS unit connector A (28P) No. 4 terminal.

Fig. 25: Identifying Continuity Between Driver's MPCS Unit A (40P) Connector Terminal 8
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good driver's MPCS unit and recheck. If the DTC goes away, replace the original driver's MPCS unit. If the DTC is still present, replace the front passenger's MPCS unit.

NO - Repair open in the wire.

DTC B2189: DRIVER'S POWER WINDOW POSITION DETECT CIRCUIT ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the driver's power window by using the power window master switch manually.
4. Check for DTCs with the HDS.

Is DTC B2175 or B2176 also indicated?

YES - Troubleshoot the indicated DTC(s) first.

NO - Go to step 5.

5. Reset the power window control unit (see **RESETTING THE POWER WINDOW CONTROL UNIT**).
6. Clear the DTCs with the HDS.
7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Open and close the driver's power window by using the power window master switch manually.
9. Check for DTCs with the HDS.

Is DTC B2189 indicated?

YES - Go to step 10.

NO - The system is OK at this time.

10. Turn the ignition switch to LOCK (0).
11. Substitute a known-good driver's MPCS unit.
12. Clear the DTCs with the HDS.
13. Turn the ignition switch to LOCK (0), and then back ON (II).
14. Open and close the driver's power window by using the power window master switch manually.
15. Check for DTCs with the HDS.

Is DTC B2189 indicated?

YES - Replace the driver's power window motor.

NO - Replace the driver's MPCS unit.

DTC B2190: FRONT PASSENGER'S POWER WINDOW POSITION DETECT CIRCUIT ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Open and close the front passenger's window by using the front passenger's power window switch manually.
4. Check for DTCs with the HDS.

Is DTC 82177 or B2178 also indicated?

YES - Troubleshoot the indicated DTC(s) first.

NO - Go to step 5.

5. Reset the power window control unit (see **RESETTING THE POWER WINDOW CONTROL UNIT**).
6. Clear the DTCs with the HDS.
7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Open and close the front passenger's power window by using the front passenger's power window switch manually.
9. Check for DTCs with the HDS.

Is DTC B2190 indicated?

YES - Go to step 10.

NO - The system is OK at this time.

10. Turn the ignition switch to LOCK (0).
11. Substitute a known-good front passenger's MPCS unit.
12. Clear the DTCs with the HDS.
13. Turn the ignition switch to LOCK (0), and then back ON (II).
14. Open and close the front passenger's power window by using the front passenger's power window switch manually.
15. Check for DTCs with the HDS.

Is DTC B2190 indicated?

YES - Replace the front passenger's window motor.

NO - Replace the front passenger's MPCS unit.

DTC B2191: FRONT PASSENGER'S MPCS UNIT INTERNAL (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Check for DTCs with the HDS.

Is DTC B2191 indicated?

YES - Replace the front passenger's MPCS unit.

NO - Intermittent failure, the system is OK at this time.

DRIVER'S MPCS UNIT INPUT TEST

1. Turn the ignition switch to LOCK (0).
2. Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
3. Disconnect driver's MPCS unit (A) connectors A (40P) and B (UP).

Fig. 26: Identifying Driver's MPCS Unit Connectors Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Power Windows - MDX

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A8	GRY	Under-dash fuse/relay box connector J (21P) and power window master switch connector B (14P) disconnected	Check for continuity between the A8 terminal and under-dash fuse/relay box connector J (12P) No. 1 terminal, and A8 terminal and power window master switch connector B (14P) No. 13 terminal: There should be continuity.	An open in the wire
			Check for continuity to ground: There should be no continuity.	Short to ground in the wire
A39	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	- Blown No. 3 (P/W) (50 A) fuse in the main under-hood fuse box - Faulty power window relay - An open in the wire
A3	ORN	Connect the A39 terminal to body ground, and connect the A3 and B8 terminals with a jumper wire.	Check the left rear power window motor operation: The motor should run (the power window should go up).	- Blown No. 24 (20 A) fuse in the under-dash fuse/relay box - Poor ground (G601) - Faulty power window relay - Faulty left rear power window switch - Faulty left rear power window motor - An open in the wire
A32	YEL	Connect the A39 terminal to body ground, and connect the A32 and B8 terminals with a jumper wire.	Check the left rear power window motor operation: The motor should run (the power window should go down).	
B1	YEL	Connect the B8 and B1 terminals, and the B7 and B14 terminals with jumper wires.	Check the driver's power window motor operation: The motor should run (the power window should go down).	- Blown No. 27 (30 A) fuse in the under-dash fuse/relay box - Faulty driver's power window
		Connect the B8 and B7 terminals, and the B1 and	Check the driver's power window motor operation:

3. If the continuity is not as specified, replace the switch (see **POWER WINDOW MASTER SWITCH REPLACEMENT**).

REAR POWER WINDOW SWITCH TEST/REPLACEMENT

1. Remove the rear door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**), and disconnect the 14P connector from the rear power window switch.
2. Remove the power window switch panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**).
3. Remove the three mounting screws and the rear power window switch (A).

Fig. 43: Identifying Rear Power Window Switch And Mounting Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Swap the rear power window switch with another known-good power window switch and test. If the original power window switch is faulty; replace it.

5. Install the switch in the reverse order of removal.
6. Reset the power window control unit (see RESETTING THE POWER WINDOW CONTROL UNIT).

POWER WINDOW MASTER SWITCH REPLACEMENT

1. Remove the driver's door panel (see FRONT DOOR PANEL REMOVAL/INSTALLATION), and disconnect the 14P connector from the power window master switch.
2. Remove the power window switch panel (see FRONT DOOR PANEL REMOVAL/INSTALLATION).
3. Remove the four mounting screws and the power window master switch (A).

Fig. 44: Identifying Power Window Master Switch And Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the switch in the reverse order of removal.
5. Reset the power window control unit (see RESETTING THE POWER WINDOW CONTROL UNIT).

FRONT PASSENGER'S POWER WINDOW SWITCH REPLACEMENT

1. Remove the front passenger's door panel (see FRONT DOOR PANEL REMOVAL/INSTALLATION), and disconnect the 14P connector from the front passenger's power window switch.
2. Remove the power window switch panel (see FRONT DOOR PANEL REMOVAL/INSTALLATION).
3. Remove the three mounting screws and the front passenger's power window switch (A).

Fig. 45: Identifying Front Passenger's Power Window Switch And Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the switch in the reverse order of removal.
5. Reset the power window control unit (see **RESETTING THE POWER WINDOW CONTROL UNIT**).

GENERAL TROUBLESHOOTING INFORMATION

SH-AWD INDICATOR

The SH-AWD indicator comes on under certain conditions even if the AWD system is working normally. Here are some examples:

- When you use high-powered wireless equipment such as a CB or Ham radio in the vehicle.
- When you keep spinning the rear wheels while the vehicle is stuck in sand, mud, snow, etc.
- When the battery voltage suddenly drops below 10 volt.

After the SH-AWD indicator comes on, it stays on until you turn the ignition switch off.

DIAGNOSTIC TROUBLE CODE (DTC)

- The SH-AWD control unit can memorize up to eight different DTCs. The system displays the DTCs by

blinking the SH-AWD indicator. Multiple DTCs are displayed in the order they occurred, beginning with the most recent.

- If the same DTC is detected more than once, the most recent DTC is written over the earlier one. Therefore, when the same problem is detected more than once, it is memorized as a single DTC.
- The DTCs are memorized in the EEPROM (non-volatile memory). Therefore, the memorized DTCs are not cleared when the battery is disconnected or the SH-AWD control unit is disconnected.
- If there is a problem in the central processing unit (CPU) of the SH-AWD control unit, the SH-AWD indicator comes on, but no DTC is memorized.

SELF-DIAGNOSIS

When a problem is detected by self-diagnosis, the system does the following:

- Turns the SH-AWD indicator on.
- Memorizes the DTC.
- Stops AWD control and puts the vehicle back in FWD.
- Reduces engine torque to suit the driving conditions when the abnormality was detected.

HOW TO CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCs)

When the SH-AWD control unit senses an abnormality in the input or output systems, the SH-AWD indicator in the gauge assembly will usually come on, and the malfunction indicator lamp (MIL), the D5 indicator, and/or the ABS indicator may also come on.

1. With the ignition switch OFF, connect the HDS to the data link connector (DLC) (A) behind the driver's dashboard lower cover.

Fig. 3: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II), and follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC(s), refer to the **DTC TROUBLESHOOTING**.

NOTE: See the HDS help menu for specific instruction.

3. If there are fuel and emission DTCs, A/T DTCs, and VSA system DTCs at the same time, troubleshoot the fuel and emission DTCs first.
4. After recording the DTCs, clear all DTCs.
5. Test-drive the vehicle for several minutes in AWD mode, and check for DTCs. If the DTC returns, refer to the **DTC TROUBLESHOOTING**. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all connectors and terminals in the circuit are tight.

HOW TO TROUBLESHOOT CIRCUITS AT THE SH-AWD CONTROL UNIT

Special Tools Required

Backprobe set 07SAZ-001000A (two required)

1. Remove the left side trim panel cover (see **TRIM REMOVAL/INSTALLATION - REAR SIDE AREA**).
2. Remove the cargo floor lid and the cargo box (see **TRIM REMOVAL/INSTALLATION - CARGO AREA**).
3. Remove the SH-AWD control unit (A).

Fig. 4: Identifying SH-AWD Control Unit

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the circuit on the SH-AWD control unit according to the DTC Troubleshooting using the special tools and a digital multimeter or an analog circuit tester (A).

Fig. 5: Identifying Circuit On SH-AWD Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the backprobe adapters (B) to the stacking patch cords (C), and connect the cords to the multimeter or an analog circuit tester. Using the wire insulator as a guide for the contoured-tip of the backprobe adapter, gently slide the tip into the connector from the wire side until it comes in contact with the terminal end of the wires.

UPDATING THE SH-AWD CONTROL UNIT

Special Tools Required

- Honda diagnostic system (HDS)
- Honda interface module (HIM)
- HDS pocket tester

NOTE:

- Use this procedure when you need to update the SH-AWD control unit in a troubleshooting procedure.
- Make sure the HDS/HIM has the latest software version.
- Before you update the SH-AWD control unit, make sure the battery in the vehicle is fully charged.
- Never turn the ignition switch OFF during the update. If there is a problem with the update, leave the ignition switch ON.
- To prevent SH-AWD control unit damage, do not operate anything electrical (headlights, audio system, brakes, A/C, power windows, moonroof, door locks, etc.) during the update.
- To ensure the latest program is installed, do an SH-AWD control unit update whenever the SH-AWD control unit is substituted or replaced.
- You cannot update an SH-AWD control unit with a program it already has. It will only accept a new program.
- If you need to diagnose the Honda interface module (HIM) because the

HIM's red (#3) lamp came on or was flashed during the update, leave the ignition switch in the ON (II) position when you disconnect the HIM from the data link connector (DLC). This will prevent SH-AWD control unit damage.

1. Select the update program, and follow the screen prompts to update the SH-AWD control unit.
2. If the software in the SH-AWD control unit is the latest, disconnect the HDS/HIM from the DLC, and go back to the procedure that you were doing. If the software in the SH-AWD control unit is not the latest, follow the instructions on the screen.
3. Do the SH-AWD control unit initialization (see SH-AWD Control Unit Initialization).
4. Do the SH-AWD differential clutch torque memorization (see SH-AWD Differential Clutch Torque Memorization).
5. Do the yaw rate-lateral/longitudinal acceleration neutral position memorization (see YAW RATE-LATERAL/LONGITUDINAL ACCELERATION NEUTRAL POSITION MEMORIZATION).

SH-AWD DIFFERENTIAL CLUTCH TORQUE MEMORIZATION

Whenever the side clutch set is replaced, the differential clutch torque memorization must be done.

1. With the ignition switch to LOCK (0), connect the HDS to the 16P DLC (A) behind the driver's dashboard lower cover.

Fig. 6: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), go to the miscellaneous test menu/neutral menu/differential torque and follow the prompts on the HDS screen.

NOTE: See the HDS help menu for specific instructions.

YAW RATE-LATERAL/LONGITUDINAL ACCELERATION NEUTRAL

POSITION MEMORIZATION

Whenever the yaw rate sensor or the lateral acceleration sensor is replaced, its neutral position memorization must be done.

1. With the ignition switch to LOCK (0), connect the HDS to the 16P DLC (A) behind the driver's dashboard lower cover.

Fig. 7: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), go to the miscellaneous test menu/neutral menu/all sensor and follow the prompts on the HDS screen.

NOTE: See the HDS help menu for specific instructions.

SH-AWD CONTROL UNIT INITIALIZATION

Whenever the SH-AWD control unit is replaced, it must be initialized.

1. With the ignition switch to LOCK (0), connect the HDS to the 16P DLC (A) behind the driver's dashboard lower cover.

Fig. 8: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Turn the ignition switch to ON (II), go to the miscellaneous test menu/neutral menu/all sensor and follow the prompts on the HDS screen.

NOTE: See the HDS help menu for specific instructions.

		Acceleration Sensor Malfunction
<u>77-6</u>	ON	Steering Angle Sensor Malfunction
<u>78-xx</u>	ON	SH-AWD Control Unit Self-Diagnostic Malfunction ("x" can be 0 thru 9 or A thru F)
<u>81-1</u>	ON	Left Search Coil Sensor Malfunction
<u>82-1</u>	ON	Right Search Coil Sensor Malfunction
<u>91-1</u>	ON	SH-AWD Control Unit Programming Error
NOTE: The "x" at the end of each DTC denotes a numeric character (0 thru 9) or an alpha character (A thru F) that you will see on the HDS display. The character is unrelated to your troubleshooting; it designates the SH-AWD control unit manufacturer and other details used for product analysis.		
(1) DTCs are indicated by the SH-AWD indicator when the 16P data link connector (DLC) is connected to the HDS.		

SYMPTOM TROUBLESHOOTING INDEX

NOTE: Most problems in the unit are to be diagnosed by identifying noises from the gears or bearings. Care should be taken during diagnosis not to confuse differential noises with those from other drivetrain components.

SYMPTOM TROUBLESHOOTING CHART

Symptom	Diagnostic Procedure	Also check for
The SH-AWD indicator does not go off, and no DTCs are stored	Symptom troubleshooting (see <u>THE SH-AWD INDICATOR DOES NOT GO OFF, AND NO DTCs ARE STORED</u>).	
The SH-AWD indicator does not come on	Symptom troubleshooting (see <u>THE SH-AWD INDICATOR DOES NOT COME ON</u>).	
Gear or bearing noises	• Fluid level too low. • Incorrect or worn out fluid • Damaged or chipped gears. • Side case clearance incorrect. • Incorrect tire size (rolling circumference).	• Add fluid • Drain and fill the differential • Replace the differential carrier assembly • Side case clearance adjustment
Rear differential overheats	• Fluid level too low.	• Add fluid

2008 Acura MDX

2007-09 DRIVELINE/AXLES Rear Differential - MDX

	• Incorrect fluid type.	• Drain and fill the differential
Rear differential leaks fluid	• Fluid level too high. • Clogged breather hose. • Worn or damaged oil seal. • Damaged sealing washer. • Loose mounting bolts or inadequate sealing.	• Lower to proper level • Clean or replace • Replace the sealing washer • Replace the oil seal • Recheck torque or apply sealant
Rear differential screeches, whines, moans, or squeaks	• Fluid level too low. • Incorrect or worn out fluid • Incorrect tire rolling circumference. • Damaged oil pump.	• Add fluid • Drain and fill the differential • Adjust tire pressure or replace tires • Replace the differential carrier assembly
Noise during acceleration, or when accelerating from a full stop	• Incorrect of side case clearance. • Incorrect of pre-load. • Incorrect of backlash of hypoid gear. • Damaged or chipped gears. • Incorrect tire size (rolling circumference).	• Pre-load adjustment • Side case clearance adjustment • Replace the differential carrier assembly
HDS does not communicate with the SH-AWD control unit or the vehicle	Troubleshooting DLC circuit (see <u>DLC CIRCUIT TROUBLESHOOTING</u>).	

SYSTEM DESCRIPTION

SH-AWD SYSTEM

Outline

This vehicle is equipped with a Super Handling All-wheel Drive (SH-AWD) rear differential system. This system uses electromagnetic clutches and the SH-AWD control unit to control front to rear torque distribution and independent left to right rear torque distribution. This allows the system to function as a limited slip differential and as a torque distribution system to improve standing start performance, straight-line stability, climbing, and cornering ability.

SH-AWD features include

- Independent torque distribution to the front and rear wheels, and to the left and right wheels for neutral handling when cornering.
- Controls differential (inside/outside) wheel speed in a turn to increase cornering stability.
- Limited slip differential function for better acceleration.

Operation

When driving in a straight line, the front and rear wheels are traveling at the same speed. In a normal turn, the distance traveled by the front wheels is longer than that of the rear wheels. The SH-AWD system monitors the speed of the front wheels, and increases torque to the outside rear wheel proportionally. This improves stability and steering response, and on slippery surfaces it provides improved traction of the 4-wheel drive system.

Fig. 9: SH-AWD System Operation Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Construction

1. The differential assembly has a conventional hypoid ring and pinion gear set.
2. The direct electromagnetic clutch system consists of the coils, the planetary gear sets, and the multi-plate clutches that are installed in the side cases on either side of the differential carrier. When driving straight ahead, both rear wheels rotate at the same speed. When turning, current is applied to the appropriate

outside wheel main coil to engage the clutch. The amount of current passed through the electromagnetic clutch controls the amount of driving force to the outside wheel.

Fig. 10: SH-AWD System Construction Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SH-AWD 4WD CONTROL SYSTEM

Control System

The SH-AWD control system consists of a SH-AWD control unit, the PCM, the VSA modulator-control unit, along with various sensors and switches that detect the steering angle, the lateral G force, the yaw, and the vehicle speed. A fluid temperature sensor is located on in the rear differential. The control units exchange information via the F-CAN communication lines. The SH-AWD control unit has a self-diagnostic function. If a malfunction is detected, the SH-AWD control unit turns on the SH-AWD indicator in the gauge assembly and the system goes into fail-safe mode. When in fail-safe mode, the vehicle disables the SH-AWD differential. The vehicle defaults to front wheel drive, reduces engine torque to suit the driving conditions.

Driving Force Control

The driving force control distributes the power based on the driver's inputs. It distributes torque to the front and rear wheels based on the throttle opening and the available engine torque output. When turning, torque is applied to the rear wheels independently based on the lateral G input and the direction of the turn. This generates an inward yaw movement to help steer the vehicle around the turn.

Fig. 11: SH-AWD 4WD Control System Function Diagram - Driving Force Control
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

ELECTROMAGNETIC CLUTCH SYSTEM

Construction

The electromagnetic clutch system is incorporated into the side case assemblies on both sides of the differential case. The system consists of the multi-plate clutches, the planetary gears, the pressure guides, the solenoid coil assembly (the search coil and the main coil), the armature assembly (the slider and the armature), and the yoke.

COMPONENTS PURPOSE CHART

Components	Purpose
Multi-plate clutches	Convert thrust into torque, absorb wheel speed differences
Planetary gears	Magnify and convey clutch torque
Pressure guides	Reduce fluctuations in pressure
Search coils	Detect magnetic flux
Main coils	Generates magnetic fields
Slider	Centers the armature
Armature	Generates magnetic flux to generate thrust
Yoke	Generates magnetic flux to clamping force

Fig. 12: Electromagnetic Clutch System Construction Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Operation

The SH-AWD control unit receives inputs from the PCM and the VSA modulator-control unit on the driving conditions via the F-CAN. The SH-AWD control unit sends signals to the main coils, which engage the electromagnetic clutches that connect the planetary gear set. This increases the torque applied to the rear wheels. The amount of current sent to the clutch is continuously varied as driving conditions change.

Fig. 13: Electromagnetic Clutch System Operation Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEARCH COIL DETECTION SYSTEM

As the clutch discs wear, the air gap between the pressure guides and the multi-plate clutches increases. The increase in air gap changes the magnetic field generated by the main coil and the yoke. The search coil detects these changes in the magnetic field. The SH-AWD control unit uses predetermined maps to compensate for the changes to maintain precise control and smooth clutch engagement.

DTC TROUBLESHOOTING

DTC 12-1,12-2,12-3: LATERAL ACCELERATION SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

2008 Acura MDX

2007-09 DRIVELINE/AXLES Rear Differential - MDX

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the VSA system with the HDS.

Are any lateral acceleration sensor DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Test-drive the vehicle with an assistant. Drive in a left and right zig-zag pattern at about 13 mph (20 km/h) and check the LATERAL ACCELERATION SENSOR in the DATA LIST with the HDS.

Does the sensor value change when turning?

YES -Go to step 5.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

5. Park the vehicle on a level surface.
6. Check the LATERAL ACCELERATION SENSOR in the DATA LIST with the HDS.

Is there 0.1G or less?

YES -Intermittent failure, the system is OK at this time. If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Do the yaw rate-lateral/longitudinal acceleration neutral position memorization (see **YAW RATE-LATERAL/LONGITUDINAL ACCELERATION NEUTRAL POSITION MEMORIZATION**). If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 15-1: LONGITUDINAL ACCELERATION SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

2008 Acura MDX

2007-09 DRIVELINE/AXLES Rear Differential - MDX

3. Clear the DTC with the HDS.
4. Test-drive the vehicle with an assistant. When accelerating, check the LONGITUDINAL ACCELERATION SENSOR in the DATA LIST with the HDS.

Does the sensor value change when acceleration?

YES -Go to step 5.

NO -Replace the yaw rate-lateral/longitudinal acceleration sensor (see **STEERING ANGLE SENSOR CENTER POINT WRITING**).

5. Park the vehicle on a level surface.
6. Check the LONGITUDINAL ACCELERATION SENSOR in the DATA LIST with the HDS.

Is there 0.1 G or less?

YES -Go to step 7.

NO -Do the yaw rate-lateral/longitudinal acceleration neutral position memorization (see **SH-AWD Differential Clutch Torque Memorization**). If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

7. Test-drive the vehicle for 2 minutes in a vehicle speed is kept constant at 19 mph (30 km/h).
8. Check for DTCs with the HDS.

Is DTC 15-1 indicated?

YES -Replace the yaw rate-lateral/longitudinal acceleration sensor (see **STEERING ANGLE SENSOR CENTER POINT WRITING**).

NO -Intermittent failure, the system is OK at this time. If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 16-3: STEERING ANGLE SENSOR NEUTRAL POSITION INCORRECT

NOTE:

- Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Check the wheel alignment (see **WHEEL ALIGNMENT**).
- Check for installation of the steering angle sensor.

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the VSA system with the HDS.

Are any steering angle sensor DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Start the engine.
5. Check the STEERING ANGLE SENSOR in the DATA LIST with the HDS.

When the steering wheels is turned slowly, does the value change?

YES -Go to step 6.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

6. Test-drive the vehicle in a straight line at 19 mph (30 km/h) or more.
7. Park the vehicle on a level surface, and center the steering wheel.
8. Check the STEERING ANGLE SENSOR in the DATA LIST with the HDS.

It is within ± 25 deg of center?

YES -Intermittent failure, the system is OK at this time. If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Do the steering angle sensor center point writing (see **STEERING ANGLE SENSOR CENTER POINT WRITING**). If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 33-2, 33-3: YAW RATE SENSOR MALFUNCTION

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the VSA system with the HDS.

Are any yaw rate sensor DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Test-drive the vehicle with an assistant. Drive in a left and right zig-zag pattern at about 13 mph (20 km/h) and check the YAW RATE SENSOR in the DATA LIST with the HDS.

Does the sensor value change when turning?

YES -Go to step 5.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

5. Park the vehicle on a level surface.
6. Check the YAW RATE SENSOR in the DATA LIST with the HDS.

Is there 3.5 degls or less?

YES -Intermittent failure, the system is OK at this time. If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Do the yaw rate-lateral/longitudinal acceleration neutral position memorization (see **SH-AWD Differential Clutch Torque Memorization**). If the DTC returns, replace the SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 41-1: F-CAN MALFUNCTION (LOST COMMUNICATION WITH POWER CONTROL MODULE (PCM))

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the PGM-FI system with the HDS.

Are there any PGM-FI DTCs indicated?

YES -go to .

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Check for DTCs with the HDS.

Is DTC 41-1 indicated?

YES -Go to step 7.

NO -Intermittent failure, the system is OK at this time. Check for intermittent open between SH-AWD control unit connector terminals A10 and A20 and PCM connector terminals A48 and A49.

7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.

NOTE: This step must be done to prevent PCM damage.

9. Disconnect PCM connector A (49P).
10. Connect PCM connector terminals A 48 and A 49 to body ground with jumper wires.

Fig. 20: Identifying PCM Connector Terminals To Body Ground With Jumper Wires
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect SH-AWD control unit connector A (20P).
12. Check for continuity between SH-AWD control unit connector terminals A10 and A20 to body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 21: Identifying Continuity Between SH-AWD Control Unit Connector Terminals To Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Repair open in the wires between the SH-AWD control unit and the PCM.

DTC 41-2: F-CAN MALFUNCTION (LOST COMMUNICATION WITH VSA)

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for PGM-FI DTC's with the HDS.

Are there any PGM-FI DTCs indicated?

YES -Go to the indicated DTC's troubleshooting.

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Check for DTCs with the HDS.

Is DTC 41-2 indicated?

YES -Go to step 7.

NO -Intermittent failure, the system is OK at this time. Check for intermittent open between SH-AWD control unit connector terminals A10 and A20 and VSA modulator-control unit 46P connector terminals No. 38 and No. 39.

7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.

NOTE: This step must be done to prevent PCM damage.

9. Disconnect the VSA modulator-control unit 46P connector.
10. Connect VSA modulator-control unit 46P connector terminals No. 38 and No. 39 to body ground with jumper wires.

VSA MODULATOR-CONTROL UNIT 46P CONNECTOR

Fig. 22: Identifying VSA Modulator-Control Unit 46P Connector Terminals To Body Ground With Jumper Wires

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect SH-AWD control unit connector A (20P).
12. Check for continuity between SH-AWD control unit connector terminals A10 and A20 to body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Fig. 23: Identifying Continuity Between SH-AWD Control Unit Connector Terminals To Body

Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Repair open in the wires between the SH-AWD control unit and the VSA modulator-control unit.

DTC 41-4: F-CAN MALFUNCTION (LOST COMMUNICATION WITH A/T CONTROL UNIT)

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the PGM-FI system with the HDS.

Are there any PGM-FI DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Check for DTCs with the HDS.

Is DTC 41-4 indicated?

YES -Go to step 7.

NO -Intermittent failure, the system is OK at this time. Check for intermittent open between SH-AWD control unit connector terminals A10 and A20 and PCM connector terminals A48 and A49.

7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.

NOTE: **This step must be done to prevent PCM damage.**

9. Disconnect the PCM connector A (49P).
10. Connect PCM connector terminals A48 and A49 to body ground with jumper wires.

Fig. 24: Identifying PCM Connector Terminals To Body Ground With Jumper Wires
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect SH-AWD control unit connector A (20P).
12. Check for continuity between SH-AWD control unit connector terminals A10 and A20 to body ground.

Fig. 25: Identifying Continuity Between SH-AWD Control Unit Connector Terminals To Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).)

NO -Repair open in the wires between the SH-AWD control unit and the PCM.

DTC 41-5: F-CAN MALFUNCTION (LOST COMMUNICATION WITH YAW RATE-LATERAL/LONGITUDINAL ACCELERATION SENSOR)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
3. Check for DTCs in the VSA system with the HDS.

Are any yaw rate-lateral/longitudinal acceleration sensor DTCs or F-CAN indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Check for DTCs with the HDS.

Is DTC 41-5 indicated?

YES -Go to step 7.

NO -Intermittent failure, the system is OK at this time. Check for intermittent open between SH-AWD control unit connector terminals A10 and A20 and yaw rate-lateral/longitudinal acceleration sensor 4P connector terminals No. 3 and No. 2.

7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.

NOTE: This step must be done to prevent PCM damage.

9. Disconnect the yaw rate-lateral/longitudinal acceleration sensor 4P connector.
10. Connect yaw rate-lateral/longitudinal acceleration sensor 4P connector terminals No. 3 and No. 2 to body ground with jumper wires.

**YAW RATE-LATERAL/LONGITUDINAL
ACCELERATION SENSOR 4P CONNECTOR**

Fig. 26: Identifying Yaw Rate-Lateral/Longitudinal Acceleration Sensor Terminals To Body Ground With Jumper Wires

11. Disconnect SH-AWD control unit connector A (20P).
12. Check for continuity between SH-AWD control unit connector terminals A10 and A20 to body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Fig. 27: Identifying Continuity Between SH-AWD Control Unit Connector Terminals To Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Repair open in the wire between the SH-AWD control unit and the yaw rate-lateral/longitudinal acceleration sensor.

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the VSA system with the HDS.

Are any steering angle sensor DTCs of F-CAN Indicated?

YES -go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Check for DTCs with the HDS.

Is DTC 41-6 indicated?

YES -Go to step 7.

NO -Intermittent failure, the system is OK at this time.

7. Turn the ignition switch to LOCK (0).
8. Jump the SCS line with the HDS.

NOTE: This step must be done to prevent PCM damage.

9. Disconnect the steering angle sensor 5P connector.
10. Connect steering angle sensor 5P connector terminals No. 4 and No. 2 to body ground with jumper wires.

STEERING ANGLE SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 28: Identifying Steering Angle Sensor 5P Connector Terminals To Body Ground With Jumper Wires

11. Disconnect SH-AWD control unit connector A (20P).
12. Check for continuity between SH-AWD control unit connector terminals A10 and A20 to body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 29: Identifying Continuity Between SH-AWD Control Unit Connector Terminals To Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the SH-AWD control unit if it does not have the latest software (see UPDATING THE SH-AWD CONTROL UNIT), or substitute a known-good SH-AWD control unit (see SH-AWD Control Unit Replacement) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see SH-AWD Control Unit Replacement).

NO -Repair open in the wires between the SH-AWD control unit and the steering angle sensor.

DTC 42-1: DIFFERENTIAL FLUID TEMPERATURE SENSOR (SHORT TO POWER)

NOTE:

- Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If the vehicle has been driven, allow the rear differential to cool for about an hour or more before doing this troubleshooting procedure.

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
3. Clear the DTC with the HDS.
4. Check for DTCs with the HDS.

Is DTC 42-1 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the rear differential fluid temperature sensor 2P connector and SH-AWD control unit connector A (20P).
7. Check for continuity between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

**REAR DIFFERENTIAL FLUID TEMPERATURE
SENSOR 2P CONNECTOR**

Wire side of male terminals

Fig. 30: Identifying Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

NO -Go to step 8.

8. Connect the rear differential fluid temperature sensor 2P connector.
9. Measure the differential housing temperature with an infrared temperature gauge near the mounting location of the rear differential fluid temperature sensor. The temperature should be below 176°F (80°C) before proceeding to the next step.
10. Measure resistance between SH-AWD control unit connector terminals A8 and A18.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 31: Measuring Resistance Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 260 ohms or more?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD CONTROL UNIT REPLACEMENT**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Replace the rear differential temperature sensor (see **REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT**).

DTC 42-2: DIFFERENTIAL FLUID TEMPERATURE SENSOR (OPEN/GND SHORT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Raise the vehicle, make sure it is securely supported, and allow all four wheels to rotate freely.
5. Start the engine and turn the VSA off (the light on the VSA OFF switch comes on). Run the engine in the D position until the vehicle speed reaches 35 mph (56 km/h) and keep running for 10 minutes, then slow down and stop the wheels.
6. Check for DTCs with the HDS.

Is DTC 42-2 indicated?

YES -Go to step 7.

NO -Intermittent failure, the system is OK at this time.

7. Turn the ignition switch to LOCK (0).
8. Disconnect SH-AWD control unit connector A (20P).
9. Connect SH-AWD control unit connector terminal A18 to body ground with a jumper wire.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 32: Identifying SH-AWD Control Unit Connector Terminal A18 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the rear differential fluid temperature sensor 2P connector.
11. Check for continuity between rear differential fluid temperature sensor 2P connector terminal No. 2 and body ground.

REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR 2P CONNECTOR

Wire side of male terminals

Fig. 33: Identifying Continuity Between Rear Differential Fluid Temperature Sensor Connector Terminal 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 12.

NO -Repair open in the wire between SH-AWD control unit connector A and the rear differential fluid temperature sensor connector.

12. Connect SH-AWD control unit connector terminal A8 to body ground with a jumper wire.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 34: Identifying SH-AWD Control Unit Connector Terminal A8 To Body Ground With Jumper Wire

13. Check for continuity between rear differential fluid temperature sensor 2P connector terminal No. 1 and body ground.

REAR DIFFERENTIAL FLUID TEMPERATURE
SENSOR 2P CONNECTOR

Wire side of male terminals

Fig. 35: Identifying Continuity Between Rear Differential Fluid Temperature Sensor Connector Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 14.

NO -Repair open in the wire between SH-AWD control unit connector A and the rear differential fluid temperature sensor connector.

14. Check for continuity between SH-AWD control unit connector terminals A9 and A18.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 36: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between SH-AWD control unit connector A and the rear differential fluid temperature sensor connector.

NO -Go to step 15.

15. Check for continuity between SH-AWD control unit connector terminals A8 and A9.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 37: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between SH-AWD control unit connector A and the rear differential fluid temperature sensor connector.

NO -Go to step 16.

16. Reconnect the rear differential fluid temperature sensor 2P connector and SH-AWD control unit connector A (20P).
17. Measure resistance between SH-AWD control unit connector terminals A8 and A18.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 38: Identifying Resistance Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 12.67 kohms or less?

YES -Update the SH-AWD control unit if it does not have the latest software (see UPDATING THE SH-AWD CONTROL UNIT), or substitute a known-good SH-AWD control unit (see SH-AWD Control Unit Replacement) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see SH-AWD Control Unit Replacement).

NO -Replace the rear differential fluid temperature sensor (see REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT).

DTC 43-1: DIFFERENTIAL FLUID TEMPERATURE SENSOR CIRCUIT MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
3. Check for DTCs with the HDS.

Is DTC 42-1 or 42-2 indicated?

YES -Go to the indicated DTCs troubleshooting .

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Let the engine idle 1 minute.
7. Test-drive the vehicle for 5 minutes.

8. Check for DTCs with the HDS.

Is DTC 43-1 indicated?

YES -Go to step 9.

NO -Intermittent failure, the system is OK at this time.

9. Turn the ignition switch to LOCK (0).
10. Disconnect SH-AWD control unit connector A (20P).
11. Disconnect the rear differential fluid temperature sensor 2P connector.
12. Check for continuity between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

**REAR DIFFERENTIAL FLUID TEMPERATURE
SENSOR 2P CONNECTOR**

Wire side of male terminals

Fig. 39: Identifying Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

NO -Go to step 13.

13. Reconnect all connectors.
14. Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**).
15. Start the engine.
16. Let the engine idle 1 minute.
17. Check for DTCs with the HDS.

Is DTC 43-1 indicated?

YES -Replace the rear differential fluid temperature sensor (see **REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT**).

NO -Replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 44-11: SH-AWD CONTROL UNIT

NOTE: **Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Check for DTCs with the HDS.

Is DTC 44-11 indicated?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Intermittent failure, the system is OK at this time.

DTC 44-12: SH-AWD RELAY STUCK ON

NOTE: **Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 44-12 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0).
7. Remove the SH-AWD relay (see [SH-AWD Control Unit Replacement](#)), then test the SH-AWD relay (see [POWER RELAY TEST](#)).

Is the SH-AWD relay OK?

YES -Go to step 8.

NO -Replace the SH-AWD relay (see [SH-AWD Control Unit Replacement](#)).

8. Disconnect SH-AWD control unit connector A (20P).
9. Turn the ignition switch to ON (II).
10. Measure voltage between SH-AWD control unit connector terminal A17 and body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 40: Identifying Voltage Between SH-AWD Control Unit Connector Terminal A17 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Repair short to power in the wire between the SH-AWD control unit and the SH-AWD relay (FSR line).

NO -Go to step 11.

11. Disconnect SH-AWD control unit connector B (8P).
12. Measure voltage between SH-AWD control unit connector terminals B1 and B2.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 41: Identifying Voltage Between SH-AWD Control Unit Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Repair short to power in the wire between the SH-AWD control unit and the SH-AWD relay (PWR line).

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 44-32: SH-AWD CONTROL UNIT POWER SUPPLY STUCK ON

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 44-32 indicated?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Intermittent failure, the system is OK at this time.

DTC 44-41: SH-AWD CONTROL UNIT POWER SUPPLY STUCK OFF

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 44-41 indicated?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Intermittent failure, the system is OK at this time.

DTC 44-50: SH-AWD CONTROL UNIT POWER SUPPLY VOLTAGE LOW

NOTE: **Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Make sure the battery is fully charged and the charging system is working properly.
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Turn the ignition switch to LOCK (0).
4. Check these fuse:
 - No. 3 (RR F/B) (60 A) fuse in the main under-hood fuse/relay box.
 - No. 9 (30 A) fuse in the rear fuse/relay box.

Are the fuses OK?

YES -Go to step 5.

NO -Replace the blown fuses and recheck. If the No. 3 (60 A) and No. 9 (30 A) fuses blows again, repair short to ground in the wire between the fuse and the SH-AWD relay, then replace the fuse and recheck.

5. Clear the DTC with the HDS.
6. Start the engine.
7. Check for DTCs with the HDS.

Is DTC 44-50 indicated?

YES -Go to step 8.

NO -Intermittent failure, the system is OK at this time.

8. Turn the ignition switch to LOCK (0).
9. Remove the SH-AWD relay (see **SH-AWD Control Unit Replacement**), then test the SH-AWD relay (see **POWER RELAY TEST**).

Is the SH-AWD relay OK?

YES -Go to step 10.

NO -Replace the SH-AWD relay (see **SH-AWD Control Unit Replacement**).

10. Measure voltage between SH-AWD relay 4P connector terminal No. 1 and body ground.

SH-AWD RELAY 4P CONNECTOR

Wire side of female terminals

Fig. 42: Identifying Voltage Between SH-AWD Relay 4P Connector Terminal 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 11.

NO -Repair open in the wire between the No. 1 fuse in the under-hood fuse relay box and the SH-AWD relay.

11. Disconnect SH-AWD control unit connector A (20P) and connector B (8P).
12. Check for continuity between SH-AWD control unit connector terminal B1 and SH-AWD relay 4P connector terminal No. 2.

Fig. 43: Identifying Continuity Between SH-AWD Control Unit And SH-AWD Relay Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 13.

NO -Repair open in the wire between SH-AWD control unit connector B and the SH-AWD relay connector.

13. Check for continuity between SH-AWD control unit connector terminal A17 and SH-AWD relay 4P connector terminal No. 3.

Fig. 44: Identifying Continuity Between SH-AWD Control Unit And SH-AWD Relay 4P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 14.

NO -Repair open in the wire between SH-AWD control unit connector A and the SH-AWD relay connector.

14. Check for continuity between SH-AWD relay 4P connector terminal No. 4 and body ground.

SH-AWD RELAY 4P CONNECTOR

Wire side of female terminals

Fig. 45: Identifying Continuity Between SH-AWD Relay 4P Connector Terminal 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 15.

NO -Repair open in the wire between the SH-AWD relay and body ground.

15. Check for continuity between SH-AWD relay 4P connector terminals No. 1 and No. 3 to body ground (G604).

SH-AWD RELAY 4P CONNECTOR

Wire side of female terminals

Fig. 46: Checking Continuity Between SH-AWD Relay 4P Connector Terminals To Body Ground (G604)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery continuity?

YES -Repair short in the wire between the SH-AWD relay and body ground:

NO -Check for loose connector terminals at the SH-AWD control unit. If the connections are OK, update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 49-1: SH-AWD CONTROL UNIT (PG LINE OPEN)

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Check for DTCs with the HDS.

Is DTC 49-1 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time.

5. Measure voltage between SH-AWD control unit connector terminal B2 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 47: Identifying Voltage Between SH-AWD Control Unit Connector Terminal B2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE**

SH-AWD CONTROL UNIT), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Repair open in the wire between SH-AWD control unit connector B and body ground or poor ground (G603).

DTC 52-3: LEFT CLUTCH ELECTROMAGNETIC COIL CURRENT MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Do the clutch function test with the HDS (see **SH-AWD Function Test**).
5. Check for DTCs with the HDS.

Is DTC 52-3 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Measure voltage between SH-AWD control unit connector terminal B2 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 48: Identifying Voltage Between SH-AWD Control Unit Connector Terminal B2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES -Go to step 7.

NO -Repair open in the wire between SH-AWD control unit connector B and body ground or poor ground (G603).

7. Turn the ignition switch to LOCK (0).
8. Disconnect SH-AWD control unit connector B (8P).
9. Connect SH-AWD control unit connector terminals B4 and B5 with a jumper wire. Disconnect the left solenoid 4P connector, then check for continuity between left solenoid 4P connector terminals No. 1 and No. 2.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 49: Identifying SH-AWD Control Unit Connector Terminals With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LEFT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 50: Identifying Continuity Between Left Solenoid 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 10.

NO -Repair open in the wires between the SH-AWD control unit and the left clutch electromagnetic coil.

10. Remove the jumper wire from SH-AWD control unit connector terminals B4 and B5.
11. Check for continuity between SH-AWD control unit connector terminals B2 and B4, then check for

continuity between SH-AWD control unit connector terminals B2 and B5.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 51: Identifying Continuity Between SH-AWD Control Unit Connector Terminals B2 And B4
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 52: Identifying Continuity Between SH-AWD Control Unit Connector Terminals B2 And B5
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to ground or short to the ground wire between the SH-AWD control unit and the left clutch electromagnetic coil.

NO -Go to step 12.

12. Check for continuity between SH-AWD control unit connector terminals B4 and B5.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 53: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wires between the SH-AWD control unit and the left clutch electromagnetic coil.

NO -Go to step 13.

13. Turn the ignition switch to ON (II).
14. Measure voltage between SH-AWD control unit connector terminals B2 and B5.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 54: Identifying Voltage Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES -Repair short to power in the wires between the SH-AWD control unit and the left clutch electromagnetic coil.

NO -Go to step 15.

15. Measure voltage between SH-AWD control unit connector terminals B2 and B4.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 55: Identifying Voltage Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES -Repair short to power in the wire between SH-AWD control unit connector terminal B4 and the left clutch electromagnetic coil.

NO -Substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

DTC 53-1,53-3: LEFT CLUTCH ELECTROMAGNETIC COIL MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Do the clutch function test with the HDS (see **SH-AWD Function Test**).
5. Check for DTCs with the HDS.

Is DTC 53-1 or 53-3 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0).
7. Disconnect SH-AWD control unit connector B (8P) and the left solenoid 4P connector.
8. Connect between left solenoid 4P connector terminal No. 1 to body ground with a jumper wire.

LEFT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 56: Identifying Between Left Solenoid 4P Connector Terminal 1 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check for continuity between SH-AWD control unit connector terminal B5 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 57: Identifying Continuity Between SH-AWD Control Unit Connector Terminal B5 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 10.

NO -Repair open in the wires between the SH-AWD control unit and the left clutch electromagnetic coil.

10. Remove the jumper wire from left solenoid 4P connector terminal No. 1.
11. Connect between left solenoid 4P connector terminal No. 2 to body ground with a jumper wire.

LEFT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 58: Identifying Between Left Solenoid 4P Connector Terminal 2 To Body Ground With Jumper Wire

12. Check for continuity between SH-AWD control unit connector terminal B4 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 59: Identifying Continuity Between SH-AWD Control Unit Connector Terminal B4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 13.

NO -Repair open in the wires between the SH-AWD control unit and the left clutch electromagnetic coil.

13. Remove the jumper wire from left solenoid 4P connector terminal No. 1.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Check the REAR DIFFERENTIAL FLUID TEMPERATURE in the DATA LIST is above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
17. Turn the ignition switch to LOCK (0).
18. Disconnect the left solenoid 4P connector.
19. Measure resistance between left solenoid 4P connector terminals No. 1 and No. 2.

LEFT SOLENOID 4P CONNECTOR

Wire side of male terminals

Fig. 60: Identifying Resistance Between Left Solenoid 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 1.8 0. or more?

YES -Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 53-2: LEFT CLUTCH ELECTROMAGNETIC COIL (SHORT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Do the clutch function test with the HDS (see **SH-AWD Function Test**).
5. Check for DTCs with the HDS.

Is DTC 53-2 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0).
7. Disconnect SH-AWD control unit connector B (8P) and the left solenoid 4P connector.
8. Check for continuity between SH-AWD control unit connector terminals B4 and B5.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 61: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wires between SH-AWD control unit connector terminals B4 and B5.

NO -Go to step 9.

9. Turn the ignition switch to ON (II).
10. Measure voltage between SH-AWD control unit connector terminal B4 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 62: Identifying Voltage Between SH-AWD Control Unit Connector Terminal B4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES -Repair short to power in the wires between SH-AWD control unit connector terminal B4 and the left clutch electromagnetic coil.

NO -Go to step 11.

11. Turn the ignition switch to LOCK (0).
12. Reconnect all connectors.

13. Turn the ignition switch to ON (II).
14. Check the REAR DIFFERENTIAL FLUID TEMPERATURE in the DATA LIST is above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
15. Turn the ignition switch to LOCK (0).
16. Disconnect the left solenoid 4P connector.
17. Measure resistance between left solenoid 4P connector terminals No. 1 and No. 2.

LEFT SOLENOID 4P CONNECTOR

Wire side of male terminals

Fig. 63: Identifying Resistance Between Left Solenoid 4P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.45 Ω or less?

YES -Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 56-3: RIGHT CLUTCH ELECTROMAGNETIC COIL CURRENT MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Do the clutch function test with the HDS (see **SH-AWD Function Test**).
5. Check for DTCs with the HDS.

Is DTC 56-3 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Measure voltage between SH-AWD control unit connector terminals B2 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 64: Identifying Voltage Between SH-AWD Control Unit Connector Terminals B2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES -Go to step 7.

NO -Repair open in the wire between SH-AWD control unit connector B and body ground or poor ground (G603).

7. Turn the ignition switch to LOCK (0).
8. Disconnect SH-AWD control unit connector B (8P).
9. Connect SH-AWD control unit connector terminals B6 and B7 with a jumper wire. Disconnect the right solenoid 4P connector, then check for continuity between right solenoid 4P connector terminals No. 1 and No. 2.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

JUMPER WIRE

Wire side of female terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

RIGHT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 66: Identifying Continuity Between Right Solenoid 4P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 10.

NO -Repair open in the wire between the SH-AWD control unit and the right clutch electromagnetic coil.

10. Remove the jumper wire from SH-AWD control unit connector terminals B6 and B7.
11. Check for continuity between SH-AWD control unit connector terminals B2 and B6, then check for continuity between SH-AWD control unit connector terminals B2 and B7.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 68: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to ground or short to the ground wire between the SH-AWD control unit and the right clutch electromagnetic coil.

NO -Go to step 12.

12. Check for continuity between SH-AWD control unit connector terminals B6 and B7.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 69: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wires between the SH-AWD control unit and the right clutch electromagnetic coil.

NO -Go to step 13.

13. Turn the ignition switch to ON (II).
14. Measure voltage between SH-AWD control unit connector terminals B2 and B7.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 70: Identifying Voltage Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES -Repair short to power in the wire between SH-AWD control unit and the right clutch electromagnetic coil.

NO -Go to step 15.

15. Measure voltage between SH-AWD control unit connector terminals B2 and B6.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 71: Identifying Voltage Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES -Repair short to power in the wire between SH-AWD control unit connector terminal B6 and the right clutch electromagnetic coil.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 57-1,57-3: RIGHT CLUTCH ELECTROMAGNETIC COIL MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
3. Clear the DTC with the HDS.
4. Do the clutch function test with the HDS (see SH-AWD Function Test).
5. Check for DTCs with the HDS.

Is DTC 57-1 or 57-3 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0).
7. Disconnect SH-AWD control unit connector B (8P) and the right solenoid 4P connector.
8. Connect between right solenoid 4P connector terminal No. 1 to body ground with a jumper wire.

RIGHT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 72: Identifying Between Right Solenoid 4P Connector Terminal 1 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check for continuity between SH-AWD control unit connector terminal B7 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 73: Identifying Continuity Between SH-AWD Control Unit Connector Terminal B7 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 10.

NO -Repair open in the wires between the SH-AWD control unit and the right clutch electromagnetic coil.

10. Remove the jumper wire from right solenoid 4P connector terminal No. 1.
11. Connect between right solenoid 4P connector terminal No. 2 to body ground with a jumper wire.

RIGHT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 74: Identifying Between Right Solenoid 4P Connector Terminal 2 To Body Ground With Jumper Wire

12. Check for continuity between SH-AWD control unit connector terminal B6 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 75: Identifying Continuity Between SH-AWD Control Unit Connector Terminal B6 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 13.

NO -Repair open in the wires between the SH-AWD control unit and the right clutch electromagnetic coil.

13. Remove the jumper wire from right solenoid 4P connector terminal No. 1.
14. Reconnect all connectors.
15. Turn the ignition switch to ON (II).
16. Check the REAR DIFFERENTIAL FLUID TEMPERATURE in the DATA LIST is above 68°F (20 °C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
17. Disconnect the right solenoid 4P connector.
18. Measure resistance between right solenoid 4P connector terminals No. 1 and No. 2.

RIGHT SOLENOID 4P CONNECTOR

Wire side of male terminals

Fig. 76: Identifying Resistance Between Right Solenoid 4P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 1.8 Q, or more?

YES -Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 57-2: RIGHT CLUTCH ELECTROMAGNETIC COIL (SHORT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Do the clutch function test with the HDS (see **SH-AWD Function Test**).
5. Check for DTCs with the HDS.

Is DTC 57-2 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0).
7. Disconnect SH-AWD control unit connector B (8P) and the right solenoid 4P connector.
8. Check for continuity between SH-AWD control unit connector terminals B6 and B7.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 77: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wires between SH-AWD control unit connector terminals B6 and B7.

NO -Go to step 9.

9. Turn the ignition switch to ON (II).
10. Measure voltage between SH-AWD control unit connector terminal B6 and body ground.

SH-AWD CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 78: Identifying Voltage Between SH-AWD Control Unit Connector Terminal B6 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there more than 0.5 V?

YES -Repair short to power in the Wires between SH-AWD control unit connector terminal B6 and the right clutch electromagnetic coil. '

NO -Go to step 11.

11. Turn the ignition switch to LOCK (0).
12. Reconnect all connectors.
13. Turn the ignition switch to ON (II).
14. Check the REAR DIFFERENTIAL FLUID TEMPERATURE in the DATA LIST is above 68°F (20 *C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
15. Turn the ignition switch to LOCK (0).
16. Disconnect the right solenoid 4P connector.
17. Measure resistance between right solenoid 4P connector terminals No. 1 and No. 2.

RIGHT SOLENOID 4P CONNECTOR

Wire side of male terminals

Fig. 79: Identifying Resistance Between Right Solenoid 4P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.45 Ω or less?

YES -Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 76-1: REAR DIFFERENTIAL FLUID OVERHEATS

NOTE:

- Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- When the temperature of the rear differential fluid is abnormally high, the SH-AWD indicator comes on. This is not necessarily a problem, but DTC 76-1 will be stored.
- Check the rear differential fluid level (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**). If it's low, refill it, clear the DTC, and recheck.

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check for DTCs in the VSA system with the HDS.

Are any VSA system DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Clear the DTC with the HDS.
5. Start the engine.
6. Test-drive the vehicle at 10 mph (15 km/h).
7. Check for WHEEL SPEED in the DATA LIST with the HDS.

Are all wheel speed the same?

YES -Intermittent failure, the system is OK at this time.

NO -Go to step 8.

8. Turn the ignition switch to LOCK (0).
9. Check for rear brake drag.

Are the rear brakes OK?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control Unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Repair the rear brakes (see **BRAKE SYSTEM INSPECTION AND TEST**).

DTC 77-1: THE FUNCTIONAL ABNORMALITIES OF FUEL EMISSION

NOTE: **Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 77-1 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Check for DTCs in the PGM-FI system with the HDS.

Are any PGM-FI system DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 77-2: THE FUNCTIONAL ABNORMALITIES OF VSA MODULATOR-CONTROL UNIT

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 77-2 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Check for DTCs in the VSA system with the HDS.

Are any VSA system DTCs indicated?

YES -Go to the indicated DTC's troubleshooting.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

77-4: THE FUNCTIONAL ABNORMALITIES OF AUTOMATIC-TRANSMISSION

NOTE: **Before you troubleshoot, review the general troubleshooting information (see**

GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 77-4 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Check for DTCs in the A/T system with the HDS.

Are any A/T system DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 77-5: YAW RATE-LATERAL/LONGITUDINAL ACCELERATION SENSOR MALFUNCTION

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 77-5 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Check for DTCs in the VSA system with the HDS.

Are any yaw rate-lateral acceleration sensor DTCs indicated?

YES -go to the indicated DTCs troubleshooting.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 77-6: STEERING ANGLE SENSOR MALFUNCTION

NOTE: **Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

Is DTC 77-6 indicated?

YES -Go to step 6.

NO -Intermittent failure, the system is OK at this time.

6. Check for DTCs in the VSA system with the HDS.

Are any steering angle sensor DTCs indicated?

YES -go to the indicated DTCs troubleshooting.

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

DTC 78-XX ("X" CAN BE 0 THRU 9 OR A THRU F): SH-AWD CONTROL UNIT SELF-DIAGNOSTIC MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Clear the DTC with the HDS.
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
3. Turn the ignition switch to ON (II).
4. Check for DTCs with the HDS.

Is DTC 78-xx indicated?

YES -Update the SH-AWD control unit if it does not have the latest software (see UPDATING THE SH-AWD CONTROL UNIT), or substitute a known-good SH-AWD control unit (see SH-AWD Control Unit Replacement) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see SH-AWD Control Unit Replacement).

NO -Intermittent failure, the system is OK at this time.

DTC 81-1: LEFT SEARCH COIL SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect SH-AWD control unit connector A (20P).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
3. Check for continuity between SH-AWD control unit connector terminals A1 and A11.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 80: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 4.

NO -Go to step 7.

4. Check the REAR DIFFERENTIAL FLUID TEMPERATURE in the DATA LIST is above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20 'C).
5. Measure resistance between SH-AWD control unit connector terminals A1 and A11.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 81: Identifying Resistance Between SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.0 ohms or more?

YES -Go to step 6.

NO -Go to step 8.

6. Check for continuity between SH-AWD control unit connector terminal A1 and body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 82: Identifying Continuity Between SH-AWD Control Unit Connector Terminal A1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between SH-AWD control unit connector terminal A1 and body ground.

NO -Check for loose connector terminals at the SH-AWD control unit and repair if necessary. If the connections are OK, update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

7. Connect SH-AWD control unit connector terminals A1 and A11 with a jumper wire. Disconnect the left solenoid 4P connector, then check for continuity between left solenoid 4P connector terminals No. 3 and No. 4.

Fig. 83: Identifying SH-AWD Control Unit Connector Terminals With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LEFT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 84: Identifying Continuity Between Left Solenoid 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NO -Repair open in the wire between left solenoid 4P connector terminals No. 3 and No. 4.

8. Disconnect the left solenoid 4P connector.
9. Check for continuity between left solenoid 4P connector terminals No. 3 and No. 4.

LEFT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 85: Identifying Continuity Between Left Solenoid 4P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wires between SH-AWD control unit connector A and the left search coil sensor connector.

NO -Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

DTC 82-1: RIGHT SEARCH COIL SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Disconnect SH-AWD control unit connector A (20P).
2. Check for continuity between SH-AWD control unit connector terminals A3 and A12.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 86: Identifying Continuity Between SH-AWD Control Unit Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 3.

NO -Go to step 6.

3. Check the REAR DIFFERENTIAL FLUID TEMPERATURE in the DATA LIST is above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
4. Measure resistance between SH-AWD control unit connector terminals A3 and A12.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 87: Identifying Resistance Between SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.0 ohms or more?

YES -Go to step 5.

NO -Go to step 7.

5. Check for continuity between SH-AWD control unit connector terminal A3 and body ground.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 88: Identifying Continuity Between SH-AWD Control Unit Connector Terminal A3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between SH-AWD control unit connector terminal A3 and body ground.

NO -Check for loose connector terminals at the SH-AWD control unit and repair if necessary. If the connections are OK, update the SH-AWD control unit if it does not have the latest software (see

UPDATING THE SH-AWD CONTROL UNIT), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

6. Connect SH-AWD control unit connector terminals A3 and A12 with a jumper wire. Disconnect the right solenoid 4P connector, then check for continuity between right solenoid 4P connector terminals No. 3 and No. 4.

SH-AWD CONTROL UNIT CONNECTOR A (20P)

Wire side of female terminals

Fig. 89: Identifying SH-AWD Control Unit Connector Terminals With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RIGHT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 90: Identifying Continuity Between Right Solenoid 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NO -Repair open in the wires between right solenoid 4P connector terminals No. 3 and No. 4.

7. Disconnect the right solenoid 4P connector.
8. Check for continuity between right solenoid 4P connector terminals No. 3 and No. 4.

RIGHT SOLENOID 4P CONNECTOR

Wire side of female terminals

Fig. 91: Identifying Continuity Between Right Solenoid 4P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to ground in the wires between SH-AWD control unit connector A and the right search coil sensor connector.

NO -Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

DTC 91-1: SH-AWD CONTROL UNIT PROGRAMMING ERROR

NOTE:

- Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- DTC 91-1 is stored when the SH-AWD system update is not completed.
- Do not turn the ignition switch OFF while updating the SH-AWD system. If you turn the ignition switch OFF before completion, the SH-AWD system can be damaged.

1. Do the SH-AWD system update procedure (see **UPDATING THE SH-AWD CONTROL UNIT**).
2. Check for DTCs with the HDS.

Is DTC 91-1 indicated?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Update is complete.

SYMPTOM TROUBLESHOOTING

THE SH-AWD INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED**NOTE:**

- Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- Make sure the No. 3 (RR F/B) (60 A) fuse in the main under-hood fuse box is OK.
- Make sure the No. 9 (30 A) fuse in the rear fuse/relay box is OK.
- Make sure there are no loose connector terminals at the SH-AWD control unit.
- Make sure charging system is OK.
- Make sure the PGM-FI system and the A/T system is not in the middle of updating.

1. Test the battery (see **BATTERY TEST**). Charge or replace the battery if necessary.
2. Check the COMPLETE MEMORIZATION in the DATA LIST with the HDS.

Does the data list show complete?

YES -Go to step 3.

NO -Do the SH-AWD system memorization procedure (see **SH-AWD Differential Clutch Torque Memorization**), then go to step 3.

3. Check for DTCs in the VSA system with the HDS.

Are any steering angle sensor DTCs indicated?

YES -Go to the indicated DTCs troubleshooting.

NO -Go to step 4.

4. Start the engine.
5. Check the SH-AWD indicator value with the HDS.

Is the SH-AWD indicator value OFF?

YES -Go to the gauge control system DTC troubleshooting (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

NO -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit**).

Replacement).**THE SH-AWD INDICATOR DOES NOT COME ON**

NOTE: Before you troubleshoot, review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Make sure the HDS communicates with vehicle and the SH-AWD control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
3. Check the SH-AWD indicator.

Does the SH-AWD indicator come on and go off?

YES -Intermittent failure, the system is OK at this time.

NO -Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Disconnect SH-AWD control unit connector A (20P) and connector B (8P).
6. Turn the ignition switch to ON (II).
7. Check the SH-AWD indicator.

Does the SH-AWD indicator come on?

YES -Update the SH-AWD control unit if it does not have the latest software (see **UPDATING THE SH-AWD CONTROL UNIT**), or substitute a known-good SH-AWD control unit (see **SH-AWD Control Unit Replacement**) and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD Control Unit Replacement**).

NO -Go to the gauge control system DTC troubleshooting (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

SH-AWD FUNCTION TEST**Special Tools Required**

Adapter, torque wrench 070AJ-SJAA101

DIRECT ELECTROMAGNETIC CLUTCH TEST

NOTE: • No DTC was detected.

- The shift lever is in N.
 - The SH-AWD control unit had been initialized.
 - The tire pressures are at the specified value.
 - Tire size and wear are the same between the left and right tires.
1. Check that the differential fluid temperature is over 68°F (20°C) with the HDS. If it is below 68°F (20°C), raise the temperature by driving the vehicle in circles or by constantly turning.
 2. Raise the vehicle, and make sure it is securely supported.
 3. Remove the rear wheels.
 4. Connect the HDS to the DLC.
 5. Do the direct electromagnetic clutch test with the HDS.
 6. Install the torque wrench adapter on the rear wheel hub.

Fig. 92: Identifying Special Tool (070AJ-SJAA101)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install a torque wrench on the special tool as shown on the HDS. Write down the torque value while slowly rotating the rear hub with the torque wrench as shown. (Turn the hub no more than 90 degrees in 7 to 10 seconds).

NOTE: Use a torque wrench capable of measuring up to 80 kgf.m (580 lbf.ft) such as a commercially available Snap-on torque wrench TE352FUE.

Fig. 93: Identifying Rear Hub Rotating Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Enter the torque value into the HDS, and wait for the test to finish.
 - If the result shows the clutch driving force is normal, the clutch assembly is OK.
 - If the result shows the clutch driving force is abnormal, replace the differential fluid, and retest. If the result still shows the clutch driving force is abnormal, replace the right and left differential side case (see [SIDE CASE REPLACEMENT](#)).

REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT

INSPECTION

1. Park the vehicle on level ground, and turn the ignition switch to LOCK (0).
2. Use solvent and a brush to wash any oil and dirt off the differential fluid inspection oil filler plugs.
3. Remove the filler plug (A) and the sealing washer (B), then check the condition of the fluid, and make sure the fluid is at the proper level (C).

Fig. 94: Identifying Rear Differential Fluid Level
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. The fluid level must reach up the bottom of the filler plug hole. If it is below the hole, add the recommended fluid until it runs out, then reinstall the filler plug with a new sealing washer.

REPLACEMENT

1. Park the vehicle on level ground, and turn the ignition switch to LOCK (0).
2. Remove the filler plug (A) and the sealing washer (B).

Fluid Capacity

2.53 L (2.67 US qt, 2.23 imp qt) at fluid change

2.77 L (2.93 US qt, 2.44 imp qt) at overhaul

Recommended fluid: Honda ATF-Z1

Fig. 95: Identifying Filler Plug, Drain Plug And Sealing Washer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the drain plug (C) and the sealing washer (D), and drain the fluid.
4. Reinstall the drain plug with a new sealing washer (D).
5. Add fluid until it reaches the bottom of the filler plug hole.
6. Reinstall the filler plug with a new sealing washer.

REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT

1. Drain the differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).
2. Remove the differential fluid temperature sensor cover (A) and the differential fluid temperature sensor harness stay (B), then disconnect the differential fluid temperature sensor connector (C).

Fig. 96: Identifying Differential Fluid Temperature Sensor, Cover, Harness Stay And O-Ring With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the differential fluid temperature sensor (D).
4. Install the differential fluid temperature sensor with a new O-ring (E) in the reverse order of removal.
5. Refill the differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).

SH-AWD CONTROL UNIT REPLACEMENT

NOTE: The SH-AWD control unit must be initialized (see **SH-AWD Control Unit Initialization**) after replacement, other wise the SH-AWD system will not function.

1. Remove the rear left side trim panel cover (see **TRIM REMOVAL/INSTALLATION - REAR SIDE AREA**).
2. Remove the cargo floor lid and the cargo box (see **TRIM REMOVAL/INSTALLATION - CARGO AREA**).
3. Remove the SH-AWD control unit (A).

Fig. 97: Identifying SH-AWD Control Unit And Connectors With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the SH-AWD control unit connectors (B).
5. Install the SH-AWD control unit in the reverse order of removal.

SH-AWD RELAY REPLACEMENT

1. Remove the rear left side trim panel cover (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA).
2. Remove the SH-AWD relay (A).

3. Install the SH-AWD relay in the reverse order of removal.

Fig. 98: Identifying SH-AWD Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the SH-AWD relay in the reverse order of removal.

REAR DIFFERENTIAL MOUNT REPLACEMENT

Fig. 99: Identifying Rear Differential Mount Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DIFFERENTIAL BREATHER BOX AND HOSE REPLACEMENT

1. Remove the cargo floor lid and the cargo box (see TRIM REMOVAL/INSTALLATION - CARGO AREA).
2. Remove the breather hose clips (A), then disconnect the breather hoses (B).

Fig. 100: Identifying Breather Hoses

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the breather box clips (C) and the breather box (D).
4. Install the breather box, then connect the breather hose and the breather hose clips.
5. Align the point marks (E) on the breather hose as shown.
6. Make sure that all the hoses are properly routed, clipped into place, and not pinched.
7. Install the cargo floor lid and the cargo box (see **TRIM REMOVAL/INSTALLATION - CARGO AREA**).

REAR DIFFERENTIAL REMOVAL

Special Tools Required

Driveshaft remover 07AAD-S3VA000

1. Drain the differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).
2. Remove the exhaust pipe (A).

Fig. 101: Identifying Exhaust Pipe

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the right rear driveshaft (see **REAR DRIVESHAFT REMOVAL**).
4. Make a reference mark (A) across the propeller shaft (B) and rear differential companion flange (C). Separate the propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size wire.

Fig. 102: Identifying Reference Marks On Propeller Shaft And Rear Differential Companion Flange

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Place the transmission jack (A) under the rear differential (B).

Fig. 103: Identifying Left Inboard Joint From Rear Differential

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Using the driveshaft remover (C) and the hammer, and disconnect the left rear inboard joint (D) from the rear differential.
7. Remove the rear differential mounting bolts (E).
8. Lower the rear differential a little on the transmission jack, then remove the left rear driveshaft inboard joint from the rear differential.

NOTE: Make sure not to over extend the harness and the tube.

9. Disconnect the right solenoid 4P connector (A) and the rear differential fluid temperature sensor 2P connector (B), then remove the harness clip (C).

Fig. 104: Identifying Right Solenoid 4P And Rear Differential Fluid Temperature Sensor 2P Connectors

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the breather tube (D) from the breather pipe (E).
11. Slowly lower the rear differential a little on the transmission jack.

NOTE: Make sure not to over extend the harness.

12. Disconnect the left solenoid 4P connector (A), then remove the harness clips (B).

**Fig. 105: Identifying Left Solenoid 4P Connector And Harness Clips**
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Disconnect the ground cable (C) from the rear differential.
14. Lower the rear differential on the transmission jack.

REAR DIFFERENTIAL INSTALLATION

1. Raise the rear differential with the transmission jack.
2. If the original differential is being reinstalled, replace the set rings.
3. Raise the rear differential a little on the transmission jack.
4. Connect the ground cable (A) to the rear differential.

Fig. 106: Identifying Left Solenoid 4P Connector, Ground Cable And Harness Clips With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the left solenoid 4P connector (B), then install the harness clips (C).
6. Raise the rear differential a little on the transmission jack.
7. Connect the breather tube (A) to the breather pipe (B) and the clip (C).

Fig. 107: Identifying Breather Tube, Breather Pipe, Right Solenoid 4P And Fluid Temperature Sensor 2P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Connect the right solenoid 4P connector (D) and the rear differential fluid temperature sensor 2P connector (E), then install the harness clip (F).
9. Install the left rear driveshaft inboard joint (A) to the rear differential.

Fig. 108: Identifying Differential Front Mounting Bracket Bolts And Left Rear Driveshaft Inboard Joint With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Raise the rear differential to the mounting level, then hand tighten the new rear differential rear mounting bolts (B) and rear differential front mounting bracket bolts (C).
11. Loosen the rear differential front mounting bolts (D).
12. Tighten the new rear differential rear mounting bolt, then tighten the rear differential front mounting bracket bolts.
13. Tighten the new rear differential front mounting bolts.
14. Attach the propeller shaft (A) to the rear differential (B) by aligning the reference marks (C) you made during the removal procedure.

Fig. 109: Identifying Reference Marks On Propeller Shaft And Rear Differential Companion Flange With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the right rear driveshaft (see REAR DRIVESHAFT INSTALLATION).
16. Install the new exhaust pipe gasket (A) and exhaust pipe (B) with new nuts (C).

Fig. 110: Identifying Exhaust Pipe Gasket And Exhaust Pipe With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Refill the differential fluid (see REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT).
18. Check the wheel alignment, and adjust it if necessary (see WHEEL ALIGNMENT).

REAR DIFFERENTIAL DISASSEMBLY/REASSEMBLY

Fig. 111: Identifying Rear Differential Components With Torque Specifications

CENTER CASE OIL SEAL REPLACEMENT

Special Tools Required

- Companion flange holder 07XAB-001A101
- Oil seal driver C 070AD-STK0130
- Fork seal driver weight 07747-0010100

1. Remove the rear differential (see **REAR DIFFERENTIAL REMOVAL**).
2. Remove the rear differential front mounting brackets (A) from the rear differential (B).

Fig. 112: Identifying Rear Differential Front Mounting Brackets And Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear differential fluid temperature sensor cover (A), rear differential fluid temperature sensor (B), O-ring (C), and rear differential harness bracket (D) with bolts.

Fig. 113: Identifying Differential Fluid Temperature Sensor, Cover And Rear Differential Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the left side case (A), the right side case (B), the four 10x12 mm dowel pins (C).

Fig. 114: Identifying Dowel Pins, Left And Right Side Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the mounting bolts (A) in a crisscross pattern in several steps, then remove the bearing set plate (B) and the 83 mm shim (C).

Fig. 115: Identifying Mounting Bolts, Bearing Set Plate And Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the six mounting bolts (A) in a crisscross pattern in several steps, then remove the differential housing assembly (B) and dowel pins (C).

Fig. 116: Identifying Differential Housing Assembly, Mounting Bolts And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the ring gear assembly (A), bearing outer races (B), 75 mm shim (C), and the 8 x 14 mm dowel pins (D).

Fig. 117: Identifying Ring Gear Assembly, Bearing Outer Races, Shim And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Raise the locknut tab (A) from the groove of the input shaft, making sure that the tab completely clears the groove to prevent damaging the input shaft.

Fig. 118: Identifying Input Shaft Locknut Tab
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the companion flange holder (A) on the companion flange. Loosen the 27 mm locknut (left-hand threads).

Fig. 119: Identifying Companion Flange Holder On Companion Flange
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Loosen the locknut (A) clockwise so that its tab (B) comes out from the groove (C) in the input shaft.

Fig. 120: Identifying Locknut Tab Position
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Tighten the locknut (A) until its tab (B) aligns with the groove (C).

Fig. 121: Identifying Locknut Tab Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove any dirt from inside of the groove in the input shaft, then loosen the locknut.
13. Remove the 27 mm locknut (A), the 27 mm spring washer (B), the 28 mm back-up ring (C), and the 28 mm O-ring (D).

Fig. 122: Identifying Locknut, Spring Washer, O-Ring And Back-Up Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Make a reference mark (A) across the input shaft (B) and companion flange (C), then remove the companion flange.

Fig. 123: Identifying Reference Mark On Input Shaft And Companion Flange
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the drive pinion (A), pinion spacer (B), and the thrust washer (C) by tapping on the drive pinion with a plastic hammer.

NOTE: Support it by wooden board not to damage the drive pinion.

Fig. 124: Identifying Drive Pinion, Pinion Spacer And Thrust Washer
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the front case oil seal (A) with a commercially available seal remover.

NOTE: Remove the oil seal with care so you do not damage the inside surface of the differential carrier seal surface.

Fig. 125: Identifying Front Case Oil Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Apply ATF to the tapered roller bearing (A), then install the new front case oil seal (B) with the oil seal driver C and fork seal driver weight (D).

Fig. 126: Identifying Front Case Oil Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Apply ATF to the tapered roller bearing (A), then install the drive pinion (B), pinion spacer (C), and the thrust washer (D) into the differential carrier (E).

NOTE: Be sure to install the pinion spacer in the direction shown.

Fig. 127: Identifying Tapered Roller Bearing ATF Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the companion flange (A) on the input shaft (B) by aligning the reference mark (C).

Fig. 128: Identifying Reference Mark On Input Shaft And Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Apply ATF to the new 28 mm O-ring (A), then install the new 28 mm O-ring, the 28 mm backup ring (B), the 27 mm spring washer (C), and the new 27 mm locknut (D).

Fig. 129: Identifying O-Ring ATF Applying Area
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the companion flange holder (A) to the companion flange, then tighten the locknut (left-hand threads).

Fig. 130: Identifying Companion Flange Holder To Companion Flange
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rotate the drive pinion several times to assure proper tapered roller bearing contact. Measure the drive pinion turning torque.
 - If the drive pinion turning torque exceeds the standard, replace the pinion spacer.
 - If the drive pinion turning torque is less than the standard, adjust by tightening the locknut a little at a time, but keep the torque within 186-353 N.m (19.0-36.0 kgf.m, 137-260 lbf.ft). If this is not possible, replace the pinion spacer.

Turning Torque:
93.2—181.4 N·m
(9.5—18.5 kgf·m, 69.0—134.0 lbf·ft)

Fig. 131: Identifying Drive Pinion Turning Torque With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Stake the, locknut tab (A) into the groove in the input shaft.

Fig. 132: Identifying Input Shaft Locknut Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Apply ATF to the tapered roller bearings, then install the ring gear assembly (A), bearing outer races (B), 75 mm shim (C), and the 8 x 14 mm dowel pins (D).

Fig. 133: Identifying Tapered Roller Bearings ATF Applying Area With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Remove the dirt and oil from the sealing surfaces. Apply liquid gasket (P/N 08718-0001) to the sealing surface. Make sure you seal the entire circumference of the bolt holes to prevent oil leakage.

NOTE:

- You must assemble the housings within 5 minutes after applying the liquid gasket. If not, the sealing surface must be cleaned, and the liquid gasket reapplied.
- Allow it to cure at least 30 minutes after assembly before filling the differential with fluid.
- Remove the overflowing liquid gasket, when joining side case.

Apply liquid gasket along the broken line and around all bolt holes.

Fig. 134: Identifying Liquid Gasket Along Broken Line And Around Bolt Holes

Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Install the dowel pins (A), the differential housing assembly (B), and the six mounting bolts (C).

Fig. 135: Identifying Differential Housing Assembly, Dowel Pins And Mounting Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Tighten the six mounting bolts in a crisscross pattern in several steps.
 28. Install the 83 mm shim (A), the bearing set plate (B), and the six mounting bolts (C).

NOTE: Install the bearing set plate, check to identification marks (D).

Fig. 136: Identifying Shim, Bearing Set Plate And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Tighten the six mounting bolts in a crisscross pattern in several steps.
30. Remove the dirt and oil from the sealing surfaces. Apply liquid gasket (P/N 08718-0001) to the sealing surface. Make sure you seal the entire circumference of the bolt holes to prevent oil leakage.

NOTE:

- You must assemble the housings with you do in 5 minutes after applying the liquid gasket. If not, the sealing surface must be cleaned, and the liquid gasket reapplied.
- Allow it to cure at least 30 minutes after assembly before filling the differential with fluid.

Left side case/right side case

Apply liquid gasket along the broken line and around all bolt holes.

Fig. 137: Identifying Liquid Gasket Along Broken Line And Around Bolt Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Install the 8 x 12 mm dowel pins (A), the rear differential right side case (B), the rear differential left side case (C), and the mounting bolts (D).

Fig. 138: Identifying Dowel Pins, Rear Differential Right And Left Side Case And Mounting Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Tighten the mounting bolts in a crisscross pattern in several steps.
33. Install the rear differential fluid temperature sensor (A), new O-ring (B), rear differential harness bracket (C), and rear differential fluid temperature sensor cover (D) with bolts.

Fig. 139: Identifying Differential Fluid Temperature Sensor, Cover And Rear Differential Harness Bracket With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Install the rear differential front mounting brackets (A) from the rear differential (B).

NOTE: Install a lower surface of the guides (C) horizontally as shown, then tighten the new rear differential front mounting bracket bolts (D).

Fig. 140: Identifying Rear Differential Front Mounting Brackets, Guides And Rear Differential With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Install the rear differential (see REAR DIFFERENTIAL INSTALLATION).
36. Refill the differential fluid (see REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT).

SIDE CASE OIL SEAL REPLACEMENT

Special Tools Required

- Oil seal driver A070AD-STK0110
- Oil seal driver B 070AD-STK0120
- Fork seal driver weight 07747-0010100

1. Remove the rear differential (see REAR DIFFERENTIAL REMOVAL).
2. Remove the 40 x 55 x 7.5 mm dust seal (A) with a commercially available tool.

Fig. 141: Identifying Dust Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the thrust washer.
4. Cut a slit at each position (4 place, 90 degrees apart) (A) on the 34.7 x 54 x 9 mm oil seal (B), then install 6 mm screw (C) (P/N 93901-16580) into the oil seal at each location. Remove the oil seal with pliers (D) and screw driver (E) as shown.

NOTE: Do not thread the 6 mm screws into the oil seal more than 5 mm (0.197 in.).

Fig. 142: Identifying Oil Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the new 34.7 x 54 x 9 mm oil seal (A) into the rear differential side case (B) with the fork seal driver weight (C) and oil seal driver A (D).

Fig. 143: Identifying Oil Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the thrust washer (A), then install the new 40 x 55 x 7.5 mm dust seal (B) with the fork seal driver (C) and oil seal driver B (D).

Fig. 144: Identifying Dust Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the rear differential (see REAR DIFFERENTIAL INSTALLATION).

CENTER CASE REPLACEMENT

1. Remove the rear differential (see REAR DIFFERENTIAL REMOVAL).
2. Remove the rear differential front mounting brackets (A) from the rear differential (B).

Fig. 145: Identifying Rear Differential Front Mounting Brackets And Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear differential fluid temperature sensor cover (A), rear differential fluid temperature sensor (B), O-ring (C), and rear differential harness bracket (D) with bolts.

Fig. 146: Identifying Differential Fluid Temperature Sensor, Cover, O-Ring And Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear differential left side case (A), the rear differential right side case (B), the 10x12 mm dowel pins (C) from the rear differential center case (D).

Fig. 147: Identifying Rear Differential Left And Right Side Case, Dowel Pins And Center Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Replace the rear differential center case.
6. Remove the dirt and oil from the sealing surfaces. Apply liquid gasket (P/N 08718-0001) to the sealing surface. Make sure you seal the entire circumference of the bolt holes to prevent oil leakage.

NOTE:

- You must assemble the housings with you do in 5 minutes after applying the liquid gasket. If not, the sealing surface must be cleaned, and the liquid gasket reapplied.
- Allow it to cure at least 30 minutes after assembly before filling the differential with fluid.

Left side case/right side case

Apply liquid gasket along the broken line and around all bolt holes.

Fig. 148: Identifying Liquid Gasket Along Broken Line And Around Bolt Holes

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the 8x12 mm dowel pins (A), the rear differential right side case (B), the rear differential left side case (C), and the mounting bolts (D) on to the rear differential center case (E).

Fig. 149: Identifying Rear Differential Left And Right Side Case, Dowel Pins, Center Case And Mounting Bolts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tighten the mounting bolts in a crisscross pattern in several steps.
9. Install the rear differential fluid temperature sensor (A), new O-ring (B), rear differential harness bracket (C), and rear differential fluid temperature sensor cover (D) with bolts.

Fig. 150: Identifying Differential Fluid Temperature Sensor, Cover, O-Ring And Harness Bracket With torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the rear differential front mounting brackets (A) from the rear differential (B).

NOTE: Install a lower surface of the guides (C) horizontally as shown, then tighten the new rear differential front mounting bracket bolts (D).

Fig. 151: Identifying Lower Surface Of Guides With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the rear differential (see REAR DIFFERENTIAL INSTALLATION).
12. Refill the differential fluid (see REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT).

SIDE CASE REPLACEMENT

1. Remove the rear differential (see REAR DIFFERENTIAL REMOVAL).
2. Remove the rear differential front mounting brackets (A) from the rear differential (B).

Fig. 152: Identifying Rear Differential Front Mounting Brackets And Rear Differential
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear differential fluid temperature sensor cover (A), rear differential fluid temperature sensor (B), O-ring (C), and rear differential harness bracket (D) with bolts.

Fig. 153: Identifying Rear Differential Fluid Temperature Sensor, O-Ring And Harness Bracket
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear differential left side case (A) or the rear differential right side case (B), the 10x12 mm dowel pins (C) from the rear differential center case (D).

Fig. 154: Identifying Rear Differential Left And Right Side Case, Dowel Pins And Center Case
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Replace the rear differential left side case or the differential right side case.
6. Remove the ring gear (A), needle bearing (B), and the 60.2 mm shim (C) from the rear differential side case (D).

Fig. 155: Identifying Ring Gear, Needle Bearing And Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Measure distance © between the end of the rear differential side case (A) and 60.2 mm shim contact area of planetary gear (B) with a straight edge (C) and depth gauge (D). Measure at three locations, and average the reading.

NOTE:

- Carry out the measurement at normal room temperature.
- Clean all the parts thoroughly before measure.

Fig. 156: Identifying Distance Between Rear Differential Side Case End And Planetary Gear Shim Contact Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Measure distance (D) between the end of the rear differential center case (A) and ring gear contact area of taper roller bearing (B) with a straight edge (C) and depth gauge (D). Measure at three locations, and average the reading.

NOTE:

- Carry out the measurement at normal room temperature.
- Clean all the parts thoroughly before measure.

Fig. 157: Identifying Distance Between Rear Differential Center Case End And Tapper Roller Bearing Ring Gear Contact Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Measure the distance (3) between the needle bearing (A) and taper roller bearing contact area of ring gear (B) with a depth gauge (C). Measure at three locations, and average the reading.

NOTE:

- Carry out the measurement at normal room temperature.
- Clean all the parts thoroughly before measure.

Fig. 158: Identifying Distance Between Needle Bearing And Tapper Roller Bearing Contact Area Of Ring Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Shim Selection Formula

10. Select the proper 60.2 mm shim from the table. Follow the example below, and use the measurements you made in steps 7 to 9.

2008 Acura MDX

2007-09 DRIVELINE/AXLES Rear Differential - MDX

(Basic Formula)

$$(1)+(2)-(3) + 0.19 = \text{shim thickness}$$

0.19 mm (0.007 in.): middle of the clearance standard.

Clearance Standard: 0.14-0.24 mm (0.006-0.009 in.)

(For example)

$$(1) = 6.12 \text{ mm (0.241 in.)}$$

$$(2) = 15.3 \text{ mm (0.602 in.)}$$

$$(3) = 19.5 \text{ mm (0.770 in.)}$$

$$6.12 + 15.3 - (19.5 + 0.19) = 1.73 \text{ mm}$$

Select the 1.70 mm shim from the table.

60.2 mm shim

SHIM THICKNESS CHART

No.	Part Number	Thickness
A	48701-RWG-000	1.10 mm (0.043 in.)
B	48702-RWG-000	1.20 mm (0.047 in.)
C	48703-RWG-000	1.30 mm (0.051 in.)
D	48704-RWG-000	1.40 mm (0.055 in.)
E	48705-RWG-000	1.50 mm (0.059 in.)
F	48706-RWG-000	1.60 mm (0.063 in.)
G	48707-RWG-000	1.70 mm (0.067 in.)
H	487Q8-RWG-000	1.80 mm (0.071 in.)
I	48709-RWG-000	1.90 mm (0.075 in.)
J	48710-RWG-000	2.00 mm (0.079 in.)
K	48711-RWG-000	2.10 mm (0.083 in.)
L	48712-RWG-000	2.20 mm (0.087 in.)

11. Place one strip of plastigage (A) on 60.2 mm shim contact area of planetary gear (B). Install the 60.2 mm shim (C), needle bearing (D), and the ring gear (E). Measure at three locations, and average the reading.

NOTE:

- Carry out the measurement at normal room temperature.
- Clean all the parts thoroughly before measure.

Fig. 159: Identifying Planetary Gear, Needle Bearing, Ring Gear And Shim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the 8x12 mm dowel pins (A), the rear differential right side case (B) or the rear differential left side case (C) and the mounting bolts (D).

Fig. 160: Identifying Rear Differential Right And Left Side Case, Dowel Pins And Mounting Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Tighten the mounting bolts in a crisscross pattern in several steps.
14. Remove the rear differential left side case (A) or the rear differential right side case (B), the 10x12 mm dowel pins (C) from the rear differential center case (D).

Fig. 161: Identifying Rear Differential Right And Left Side Case, Dowel Pins And Center Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the ring gear (A), needle bearing (B), and the 60.2 mm shim (C) from the rear differential side case (D).

Fig. 162: Identifying Ring Gear, Needle Bearing, Rear Differential Side Case And Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Measure the widest part of the plastigage.

Clearance Standard:
0.14—0.24 mm (0.006—0.009 in.)

Fig. 163: Identifying Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. If the clearance is more than the standard, go to step 7. If the clearance measured in step 16 is within the standard, go to step 18.
18. Install the 60.2 mm shim (A), needle bearing (B), and the ring gear (C) onto the rear differential side case (D).

Fig. 164: Identifying Ring Gear, Needle Bearing, Rear Differential Side Case And Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Remove the dirt and oil from the sealing surfaces. Apply liquid gasket (P/N 08718-0001) to the sealing surface. Make sure you seal the entire circumference of the bolt holes to prevent oil leakage.

NOTE:

- You must assemble the housings within 5 minutes after applying the liquid gasket. If not, the sealing surface must be

cleaned, and the liquid gasket reapplied.

- Allow it to cure at least 30 minutes after assembly before filling the differential with fluid.

Left side case/right side case

Apply liquid gasket along the broken line and around all bolt holes.

Fig. 165: Identifying Liquid Gasket Along Broken Line And Around Bolt Holes

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the 8x12 mm dowel pins (A), the rear differential right side case (B) or the rear differential left side case (C), and the mounting bolts (D) onto the rear differential center case (E).

Fig. 166: Identifying Rear Differential Right And Left Side Case, Dowel Pins And Center Case With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Tighten the mounting bolts in a crisscross pattern in several steps.
22. Install the rear differential fluid temperature sensor (A), new O-ring (B), rear differential harness bracket (C), and rear differential fluid temperature sensor cover (D) with bolts.

Fig. 167: Identifying Differential Fluid Temperature Sensor, O-Ring, Cover And Harness Bracket With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the rear differential front mounting brackets (A) from the rear differential (B).

NOTE: Install a lower surface of the guides (C) horizontally as shown, then tighten the new rear differential front mounting bracket bolts (D).

Fig. 168: Identifying Rear Differential Front Mounting Brackets, Rear Differential And Guides With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 DRIVELINE/AXLES Rear Differential - MDX

24. Install the rear differential (see **REAR DIFFERENTIAL INSTALLATION**).
25. Refill the differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).
26. Do the SH-AWD differential clutch torque memorization (see **SH-AWD Differential Clutch Torque Memorization**).

SYSTEM DESCRIPTION

The rear entertainment system is composed of a special DVD player unit built into the audio unit, a rear controller, and screen wireless headphones, wireless remote control, and auxiliary jack assembly.

SYSTEM COMPONENTS

Audio Unit

- Provides rear system power
- Provides control for the rear functions
- Allows the rear display to show information about the rear system status
- Provides a method to stop the rear passenger's from having control of the rear system
- Built into the DVD player

Rear Screen

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

- Has a flip down 9" display
- Displays information on the LCD
- Display does not work when pushed beyond the detent
- Provides output for infrared (IR) headphones

Wireless Headphone

- Has automatic ON/OFF control
- Has volume control
- Works only in the second and third row seats, not outside the vehicle or in the front seats

Wireless Remote Control

Allows remote operation of the audio functions.

Auxiliary Jack Assembly

- Allows input from standard video game and video equipment using RCA connectors
- Provides three headphone connectors and separate volume controls

Audio Remote Switch

Allows operation of the audio functions from the steering wheel.

Voice Control Switch

Allows operation of the audio functions through the navigation system.

Navigation Display

Allows operation of the audio functions through the navigation system.

OPERATING METHOD

NOTE: Refer to the Owner's Service Information for full operation details.

Audio Unit

1. Turn the rear entertainment system ON.

After the main power switch VOL PUSH PWR (A) is turned ON, push REAR PWR switch (B) to turn the rear system ON. To turn the rear system OFF, push REAR PWR, and to turn the whole system OFF, push VOL PUSH PWR.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

Fig. 3: Identifying Audio Unit Main Power Switch VOL PUSH PWR And REAR PWR Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Using the select button.
 - Front source button, indicator light ON: control of front source from audio unit.
 - Rear source button, indicator light ON: control of rear source from audio unit.
 - The rear source will automatically revert back to front source after 10 seconds if no operation is done.

Fig. 4: Identifying Rear And Front Source, And Rear Control Off Buttons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Control Enable/Disable.

By pushing the REAR CTRL OFF button the LED indicator will be ON and the rear seat passenger's will not be able to control the system from the remote. The rear display will show rear control OFF. Press

button again to enable.

4. Viewing the display.

The display (A) (built into the climate control unit) indicates the status of the front and rear systems.

Fig. 5: Identifying Display

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear speaker automatic OFF Function.

By turning the rear speaker OFF you can reduce the interference between the front source and the rear source (Headphone). The speaker will be turned ON/OFF automatically when the front and rear have different sources selected. When the rear speaker is in the OFF mode, the LCD display on the audio unit displays the rear speaker icon shown.

Fig. 6: Identifying Rear Speaker Automatic OFF

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Wireless Remote Control

Remote control switch use and function.

- With Rear Power ON and rear control enabled, the rear passengers can control the functions with the remote, except volume.
- Rear passenger can control the functions, unless the rear control has been turned off by the front user.

SELF-DIAGNOSTIC FUNCTION

The rear entertainment system has a self-diagnostic function that shows on the display. To run the self-diagnostic function, do the following:

HOW TO ENTER THE SELF-DIAGNOSTIC FUNCTION WITH THE AUDIO UNIT

1. Turn the ignition switch to ON (II).
2. To run the self-diagnostic, press the REAR PWR button four times within 3 seconds and hold the REAR PWR button in on the fourth time until the diagnostic screen appears.

Fig. 14: Audio Unit Blinking Pattern

Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOW TO ENTER FOR SELF-DIAGNOSTIC FUNCTION WITH THE WIRELESS REMOTE CONTROL

1. Turn the ignition switch to ON (II).
2. To run the self-diagnostic, press the DVD/AUX button, the AM/FM button, the FORWARD (double right arrows) button, and then the AM/FM button again. The buttons must be pressed in that order, and within 2 seconds of each other (see table), and the self-diagnostic will begin.

Fig. 15: Wireless Remote Control Blinking Pattern
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

CANCELING THE SELF-DIAGNOSTIC FUNCTION

Turn the ignition switch to LOCK (0) to cancel the self-diagnostic function. After completing repair work, run the self-diagnostic function again to make sure that there are no other malfunctions.

SELF-DIAGNOSTIC FUNCTION MODE SELECT

Use the wireless, remote control to navigate within the self-diagnostic function.

LEFT/RIGHT button: Change the function mode

UP/DOWN button: Change the detection

ENTER button: Select the detection point

2008 Acura MDX

		+B VOLT	+B voltage	* * V or Err
		TEMP.	Screen temperature	* * h or Err

SELF-DIAGNOSTIC FUNCTION MODE DISPLAY

1. CONNECT

The screen will display connection check status for each device while in this self-diagnostic mode.

- If the RAM condition for the RR DISP (rear controller and screen) is faulty, the screen will display NG (red color).
- If the connection for the H/U (audio unit) is XM (XM receiver), or AUX (auxiliary jack assembly) is faulty, the screen will display NG (red color).
- If the digital line connection between the rear controller and screen and audio unit is faulty, the screen will display NG (red color).

Fig. 17: Diagnosis Screen Display - Connection Check Status
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. UNIT CHECK

The screen will display device version, self-diagnostic status and screen status while in this self-diagnostic mode.

- If a connection to a device is no-good, the screen will display--.
- If there is a change (analog to digital) of signal error for the categories +B VOLT or TEMP, the screen will display Err.
- The screen indicates open or closed condition of the screen.

Fig. 18: Diagnosis Screen Display - Device Version
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING

RES DISC DOES NOT LOAD

NOTE:

- Discs with labels should not be used in the DVD player unit (built into the audio unit). They may damage the player mechanism.
- Make sure the CD or DVD disc is compatible with the system (refer to the Owner's service Information for more information).

1. Turn the ignition switch to ON (II).
2. Try loading a disc.

Does the disc load?

YES - Intermittent failure, the DVD player unit is OK at this time.

NO - Go to step 3.

3. Insert a known-good disc.

Does the disc load?

YES - The original disc is faulty.

NO - Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

RES DISC DOES NOT EJECT

NOTE: Discs with labels should not be used in the DVD player unit (built into the audio unit). They may damage the player mechanism.

1. Turn the ignition switch to ON (II).
2. Try ejecting a disc.

Does the disc eject?

YES - Intermittent failure, the DVD player unit (built into the audio unit) is OK at this time.

NO - Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

RES DISC DOES NOT PLAY

NOTE:

- CD-R/RWs and DVD-R/RWs will not work in the DVD player unit (built into the audio unit).
- Damaged or contaminated discs may not always play properly.
- Discs with labels should not be used in the DVD player unit (built into the audio unit). They may damage the player mechanism.
- You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.

1. Turn the ignition switch to ON (II).
2. Try loading a DVD.

Does the DVD play (display and sound)?

YES - Intermittent failure, the DVD player unit (built into the audio unit) is OK at this time.

NO - Go to step 3.

3. Insert a known-good DVD.

Does the DVD play (display and sound)?

YES - The original DVD is faulty or is an unreadable format.

NO - Go to step 4.

4. Do the self-diagnostic function (see **HOW TO ENTER FOR SELF-DIAGNOSTIC FUNCTION WITH THE WIRELESS REMOTE CONTROL**), then select function number 1 for Connect of the rear entertainment system (see **SELF-DIAGNOSTIC FUNCTION MODE SELECT**).

Is the audio unit connect condition OK?

YES - Go to step 5.

NO - Repair the poor connection in the audio unit connectors.

5. Substitute a known-good audio unit, then test the audio unit.

Is the sound normal?

YES - Replace the original audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO - Check for loose wires or poor connections at audio unit connectors, and recheck.

RES DISC SKIPS

NOTE:

- **Copy protected material on a CD-R/RW or DVD-R/RW disc will skip or not play.**
- **Check for scratches, smudges, and fingerprints on the disc.**

1. Turn the ignition switch to ON (II).
2. Try playing a disc.

Does the disc skip ?

YES - Go to step 3.

NO - Intermittent failure, the DVD player unit (built into the audio unit) is OK at this time.

3. Clean the disc, and recheck.

Does the disc play properly ?

YES - The original disc was dirty.

NO - Go to step 4.

4. Insert a known-good disc.

Does the disc play properly?

YES - The original disc is dirty or the wrong type.

NO - Go to step 5.

5. Compare the disc skipping to a known-good vehicle under the same conditions.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

Does the known-good vehicle's disc skip under the same conditions (over the same bumps and on the same rough roads)?

YES - Operation is normal.

NO - Substitute a known-good audio unit, and recheck. If the symptom/indication goes away, replace the original audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

BLACK PICTURE IS SHOWN ON THE DISPLAY

NOTE:

- If the navigation system, or XM radio do not function properly, troubleshoot and resolve those problems first.
- You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.

1. With the ignition switch to ON (II), push the rear power switch ON to see if the screen turns ON.

Does the screen come ON?

YES - Operation is normal at this time.

NO - Go to step 2.

2. Check for brightness settings in the display set up (refer to the Owner's Service Information for more information).

Are the display setting set properly?

YES - Go to step 3.

NO - Adjust the display setting and recheck the function.

3. Check the No. 9 (7.5 A) fuse in the main under-hood fuse box.

Is the fuse OK?

YES - Go to step 4.

NO - Replace the fuse, and recheck.

4. Remove the display cover (see **SPEAKER TEST/REPLACEMENT**). Then check that the rear controller and screen is properly connected.

Is the rear controller and screen connected properly?

YES - Go to step 5.

NO - Reconnect the connector, and recheck the function.

5. Disconnect the rear controller and screen connector A (24P).
6. Measure the voltage between the No. 1 terminal of the rear controller and screen connector A (24P) and body ground.

REAR CONTROLLER AND SCREEN CONNECTOR A (24P)

Wire side of female terminals

Fig. 19: Identifying Voltage Between Rear Controller And Screen Connector A (24P) Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 7.

NO - Repair open in the wire(s) between the No. 9 (7.5 A) fuse in the main under-hood fuse box and the rear controller and screen.

7. Reconnect the rear controller and screen connector A (24P).
8. Measure the voltage between the rear controller and screen connector A (24P) No. 24 terminal and body ground.

REAR CONTROLLER AND SCREEN CONNECTOR A (24P)

Wire side of female terminals

Fig. 20: Identifying Voltage Between Rear Controller And Screen Connector A (24P) Terminal 24 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

Is there less than 0.1 V?

YES - Replace the rear controller and screen.

NO - Repair open in the wire between the rear controller and screen connector A (24P) No. 24 terminal and body ground (G506).

WHITE PICTURE IS SHOWN ON THE DISPLAY/ DISPLAY LOCK

1. With the ignition switch to ON (II), push the rear power switch ON to see if the screen turns ON,

Is it normal?

YES - Operation is normal.

NO - Go to step 2.

2. Run the rear entertainment system self-diagnostic (see **SELF-DIAGNOSTIC FUNCTION**).

Is it normal?

YES - Operation is normal.

NO - Substitute a known-good rear controller and screen, and recheck. If the symptom/indication goes away, replace the original rear controller and screen.

DISPLAY AREA PICTURE HAS LINES OR HAS SHIFTED

1. With the ignition switch to ON (II), push the rear power switch ON to see if the screen turns ON.

Does the screen come have lines or has the image shifted?

YES - Go to step 2.

NO - Operation is normal at this time.

2. Check the screen mode set up (refer to the Owner's Service Information for more information).

Are the settings set properly?

YES - Substitute a known-good rear controller and screen, and recheck. If the symptom/indication goes away, replace the original rear controller and screen.

NO - Adjust the display settings, and recheck the function.

DISPLAY DOES NOT GO OFF WHEN SCREEN IS CLOSED

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

1. With the ignition switch to ON (II) and screen open, push the rear power switch ON. Then close the screen by pivoting it up.

Does the screen go off?

YES - Operation is normal at this time.

NO - Go to step 2.

2. Check the lock switch.

Does the screen close securely?

YES - If the screen securely closes and the screen does not go off, replace it.

NO - Relock the screen, and recheck. If the screen will not securely lock into position, replace it.

NO DISPLAY APPEARS ON THE REAR CONTROLLER INDICATOR

NOTE: **You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.**

1. With the ignition switch to ON (II), push the rear power switch ON to see if the screen turns ON.

Does the screen come on?

YES - Operation is normal at this time.

NO - Go to step 2.

2. Check the operation and display of the screen, the wireless remote control and the wireless headphone.

Are the operation and display normal?

YES - Faulty rear indicator.

NO -

- Screen faulty: Go to the **BLACK PICTURE IS SHOWN ON THE DISPLAY TROUBLESHOOTING** .
- Wireless remote control faulty. Go to the **WIRELESS REMOTE CONTROL DOES NOT WORK (ALL BUTTONS) TROUBLESHOOTING** .
- Wireless headphone faulty: Go to the **WIRELESS HEADPHONE SOUND IS WEAK, DISTORTED, VOLUME DOES NOT CHANGE, OR THERE IS NO SOUND IN ALL MODES TROUBLESHOOTING** .

NO SOUND/NO DISPLAY WITH AUXILIARY VIDEO UNIT INPUTS

NOTE:

- Check that the auxiliary device is properly connected, and has fresh batteries or power source connected.
- Do not connect an RCA type shorting plug with the auxiliary jack assembly 14P connector, or system damage may occur.
- You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.

1. Connect an auxiliary video source, and check the volume/display operation.

Does the display operate properly and does the audio sound normal?

YES - Operation is normal at this time.

NO - Go to step 2.

2. Substitute a known-good auxiliary video unit and recheck.

Does the auxiliary video unit operate properly?

YES - Original auxiliary video unit faulty.

NO - Go to step 3.

3. Do the self-diagnostic function (see **HOW TO ENTER FOR SELF-DIAGNOSTIC FUNCTION WITH THE WIRELESS REMOTE CONTROL**), then select function number 1 for Connect of the rear entertainment system (see **SELF-DIAGNOSTIC FUNCTION MODE SELECT**).

Is the auxiliary jack assembly connect condition OK?

YES - Go to step 8.

NO - Go to step 4.

4. Remove the auxiliary jack assembly (see **AUXILIARY JACK ASSEMBLY REPLACEMENT**). Check that the auxiliary jack assembly is properly connected.

Is the auxiliary jack assembly connected properly?

YES - Go to step 5.

NO - Reconnect the connector, and recheck the function.

5. Turn the ignition switch to LOCK (0).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

- Disconnect the audio unit connector C (24P), E (16P), and the auxiliary jack assembly 14P connector.
- Check for continuity between audio unit connector C(24P), E (16P)and body ground according to the table. Then check same terminals for continuity to the harness shield terminals C2 and E1.

CONNECTOR TERMINAL REFERENCE

Audio unit connector	Wire color
C1	PNK

C14	10	GRIM
E2	4	LTBLU
E8	9	PUR

Fig. 23: Identifying Audio Unit And Auxiliary Jack Assembly Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Open in the wire between the audio unit and the auxiliary jack assembly. Replace the appropriate shielded harness.

10. Connect an RCA type shorting plug to each audio input (R and L).

NOTE: Do not connect the RCA type shorting plug with the auxiliary jack assembly 14P connected, or system damage may occur.

11. Check for continuity between the following terminals of the auxiliary jack assembly.

No. 10 <--> No. 1

No. 12 <--> No. 1

AUXILIARY JACK ASSEMBLY

Terminal side of male terminals

Fig. 24: Identifying Continuity Between Auxiliary Jack Assembly Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Faulty auxiliary jack assembly.

12. Remove the RCA type shorting plug(s) and check the same terminals again for continuity.

Is there continuity?

YES - Faulty auxiliary jack assembly.

NO - Substitute a known-good audio unit and recheck. If the symptom/indicated goes away, replace the original audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**). If the symptom is still present, substitute a known-good rear controller and screen and recheck. If the symptom/indicated goes away, replace the original rear controller and screen.

WIRED HEADPHONE SOUND IS WEAK, DISTORTED, VOLUME DOES NOT CHANGE, OR THERE IS NO SOUND

NOTE: You need to switch the audio unit **REAR PWR** button on for the rear display, remote controls, and sound to operate.

1. Substitute a known-good wired headphone set and recheck.

Does the symptom go away?

YES - Original wired headphone set is faulty.

NO - Go to step 2.

2. Plug the wired headphones into the other ports of the auxiliary jack assembly to check their condition.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

Do all the ports have the same symptom?

YES - Go to step 3.

NO - Faulty auxiliary jack assembly.

3. Check that the wired headphone jack is properly connected.

Is the headphone jack connected properly?

YES - Go to step 4.

NO - Reconnect the wired headphone connector, and recheck the function.

4. Disconnect the auxiliary jack assembly 14P connector and rear controller and screen 24P connector.
5. Check for continuity between rear controller and screen connector A (24P) and body ground according to the table. Then check same terminals for continuity to the harness shield terminal A9.

CONNECTOR TERMINAL REFERENCE

Rear controller and screen connector	Wire color

Wire side of female terminals

AUXILIARY JACK ASSEMBLY CONNECTOR (14P)

Wire side of female terminals

Fig. 27: Identifying Audio Unit And Auxiliary Jack Assembly Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty auxiliary jack assembly.

NO - Open in the wire between the rear controller and screen and the auxiliary jack assembly. Replace the appropriate shielded harness.

WIRELESS HEADPHONES DO NOT WORK OR THERE IS STATIC IN DVD MODE

NOTE: Check the battery condition first.

1. Check the diagnosis menu 1. CONNECT and 2. UNIT CHECK of the rear entertainment system self-diagnostic (see **SELF-DIAGNOSTIC FUNCTION**).

If the self-diagnostic status indicator OK (Green color)?

YES - Go to the **WIRELESS HEADPHONE SOUND IS WEAK, DISTORTED, VOLUME DOES NOT CHANGE, OR THERE IS NO SOUND IN ALL MODES** (see).

NO - Go to step 2.

2. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).
3. Check that the digital audio lead at audio unit connector F (2P) is properly connected to the audio unit.

Is the digital audio lead at audio unit connector F (2P) connected properly?

YES - Go to step 4.

NO - Reconnect the audio unit connector F (2P) and recheck the wireless headphone function.

4. Remove the rear controller and screen (see **REAR CONTROLLER AND SCREEN REMOVAL/INSTALLATION**).

5. Check the digital audio lead at rear controller and screen connector B (2P) is properly connected to the rear controller and screen.

Is the lead at screen connector B (2P) properly?

YES - Go to step 6.

NO - Reconnect the audio unit connector F (2P) and recheck the wireless headphone function.

6. Disconnect the audio unit connector F (2P) from the audio unit and the rear controller and screen.
7. Check for continuity in the digital audio lead between the audio unit connector F (2P) No. 1 terminal and the rear controller and screen connector B (2P) No. 1 terminal.

Fig. 28: Identifying Continuity Between Audio Unit F (2P) And Rear Controller And Screen Connector B (2P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 8.

NO - Replace the digital audio lead.

8. Check for continuity in the digital audio lead between the audio unit connector F (2P) No. 1 terminal and body ground.

AUDIO UNIT CONNECTOR F (2P)

Terminal side of female terminals

Fig. 29: Identifying Continuity Between Audio Unit Connector F (2P) Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the digital audio lead and/or sublead.

NO - Go to step 9.

9. Check for continuity in the digital audio lead between the audio unit connector F (2P) No. 1 terminal and No. 2 terminal.

AUDIO UNIT CONNECTOR F (2P)

Terminal side of female terminals

Fig. 30: Identifying Continuity Between Audio Unit Connector F (2P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the digital audio lead.

NO - Go to step 10.

10. Substitute a known-good audio unit and recheck the wireless headphone function.

Do the wireless headphones work in DVD mode?

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

YES - Replace the original audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO - Replace the rear controller and screen.

WIRELESS HEADPHONE SOUND IS WEAK, SOUND DISTORTED, THERE IS STATIC, VOLUME DOES NOT CHANGE, OR THERE IS NO SOUND IN ALL MODES

NOTE: **Check the battery condition first.**

1. Substitute a known-good wireless headphone and recheck.

Does the symptom go away?

YES - Replace the original wireless headphones.

NO - Go to step 2.

2. Check the lens on the rear edge of the rear screen for dirt or damage.

Does the rear screen appear to be in good condition?

YES - Go to step 3.

NO - Substitute a known-good rear controller and screen and recheck.

3. Substitute a known-good audio unit and recheck.

Does the symptom go away?

YES - Replace the original audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO - Go to step 4.

4. Disconnect the audio unit connector E (16P), and the rear controller and screen connector A (24P).
5. Check for continuity between audio unit connector E (16P) and body ground according to the table. Then check the same terminals for continuity to the harness shield terminal E13.

E15	WHT

AUDIO UNIT CONNETCTOR E (16P)*Wire side of female terminals***Fig. 31: Identifying Audio Unit Connector E (16P) Terminals****Courtesy of AMERICAN HONDA MOTOR CO., INC.***Is there continuity?*

YES - Short in the wire between the audio unit and the rear controller and screen. Replace the appropriate shielded harness.

NO - Go to step 6.

6. Check for continuity between the terminal of audio unit connector E (16P) according to the table.

CONNECTOR TERMINAL REFERENCE

From terminal	To terminals
E13	E12, E14, E15
E15	E12, E14
E12	E14

AUDIO UNIT CONNETCTOR E (16P)*Wire side of female terminals***Fig. 32: Identifying Audio Unit Connector E (16P) Terminals****Courtesy of AMERICAN HONDA MOTOR CO., INC.***Is there continuity between any of the terminals?*

YES - Repair short in the wire(s) between the audio unit and rear controller and screen. Replace the appropriate shielded harness.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

NO - Go to step 7.

7. Check for continuity between the audio unit connector E (16P) and rear controller and screen connector A (24P) according to the table.

CONNECTOR TERMINAL REFERENCE

Audio unit connector	Rear controller and screen connector	Wire color
E12	A19	BLK
E14	A18	RED
E15	A6	WHT

REAR CONTROLLER AND SCREEN CONNECTOR A (24P)

Fig. 33: Identifying Audio Unit And Rear Controller And Screen Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Rear controller and screen faulty.

NO - Repair open in the wire between the audio unit and rear controller and screen.

WIRELESS REMOTE CONTROL DOES NOT WORK (ALL BUTTONS)

NOTE:

- Check the wireless remote control battery condition first.
- Make sure that the rear power and rear control are on (refer to the Owner's Service Information for more information).
- You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.

1. Check the wireless remote control operation.

Does the wireless remote control operate normally?

YES - Operation is normal at this time.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Rear Entertainment System - MDX

NO - Go to step 2.

2. Substitute a known-good wireless remote control and recheck.

Does the wireless remote control operate normally?

YES - Replace the original wireless remote control.

NO - Go to step 3.

3. Check the audio unit operation.

Does the audio unit operate normally?

YES - Go to step 4.

NO - Go to the audio unit power switch will not turn ON (No information display and no sound) troubleshooting (see **POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND)**).

4. Check the rear controller display.

Does the display operate normally?

YES - Replace the rear indicator sub-printed circuit board (see **REAR CONTROLLER AND SCREEN REMOVAL/INSTALLATION**).

NO - Go to the **NO DISPLAY APPEARS ON THE REAR INDICATOR TROUBLESHOOTING** .

WIRELESS REMOTE CONTROL DOES NOT WORK (SOURCE SELECT BUTTONS)

NOTE:

- Check the wireless remote control battery condition first.
- You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.

1. Check the wireless remote control operation.

Does the source select button operate?

YES -Operation is normal at this time.

NO -Go to step 2.

2. Check the diagnosis menu 1. CONNECT status of the rear entertainment system self-diagnostic (see **HOW TO ENTER FOR SELF-DIAGNOSTIC FUNCTION WITH THE WIRELESS REMOTE CONTROL**).

Is the device connect condition OK?

YES - Replace the wireless remote control.

NO - Repair the connection for the device that has a connection error indicated.

WIRELESS REMOTE CONTROL DOES NOT WORK (REAR POWER BUTTON)

NOTE:

- **Check the wireless remote control battery condition first.**
- **The audio unit main and rear pwr must be ON before the wireless remote control power button will operate.**
- **You need to switch the audio unit REAR PWR button on for the rear display, remote controls, and sound to operate.**

1. Check the wireless remote control operation.

Does the audio unit indicate REAR PWR?

YES - Replace the wireless remote control.

NO - Go to step 2.

2. Press the REAR PWR button on the audio unit.

Is the rear power button on ?

YES - Operation is normal at this time.

NO - Replace the wireless remote control.

SCREEN BACKLIGHT DOES NOT DIM/REMAINS DIM

1. Turn the ignition switch to ON (II).
2. Turn the combination light switch ON and OFF.

Does the screen backlight dim with the combination light switch in the ON position?

YES - Operation is normal at this time.

NO - Go to step 3.

3. Check the backlight settings in the display set up (refer to the Owner's Service Information for more information).

Are the display settings set properly?

YES - Go to step 4.

NO - Adjust the display settings, and recheck the function.

4. Turn the ignition switch to LOCK (0).
5. Check that the rear controller and screen and audio unit are properly connected.

Are the connections OK?

YES - Go to step 6.

NO - Reconnect the connector, and recheck the function.

6. Disconnect the rear controller and screen connector A (24P).
7. Turn the ignition switch to ON (II).
8. Measure the voltage between the rear controller and screen connector A (24P) No. 11 terminal and body ground. Turn the combination light switch on and off to see if the voltage changes.

REAR CONTROLLER AND SCREEN CONNECTOR A (24P)

Fig. 34: Identifying Voltage Between Rear Controller And Screen Connector A (24P) Terminal 11 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage with the combination light switch ON?

YES - Go to step 10.

NO - Go to step 9.

9. Check the illumination of several other unit/ switches not related to the rear entertainment system.

Are the buttons illuminated?

YES - Repair open in the wire(s) between the interior light relay in the auxiliary under-hood relay box and the rear controller and screen.

NO - Troubleshoot the interior lights. Start by checking the interior light relay in the auxiliary under-hood

relay box. If the relay is OK, check the No. 22 (7.5 A) fuse in the under-hood fuse/relay box. If there is OK, check for open in the wire between the under-hood fuse/relay box and the interior light relay.

10. Reconnect the rear controller and screen connector A(24P).
11. Measure the voltage between the rear controller and screen connector A (24P) No. 24 terminal and body ground.

REAR CONTROLLER AND SCREEN CONNECTOR A (24P)

Wire side of female terminals

Fig. 35: Identifying Voltage Between Rear Controller And Screen Connector A (24P) Terminal 24 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES - Replace the rear controller and screen.

NO - Repair open in the wire between rear controller and screen connector A (24P) No. 24 terminal and body ground (G506).

DVD PLAYER UNIT DISC IN INDICATOR OR DISC DISTINCTION INDICATOR DOES NOT COME ON/ DOES NOT GO OFF

1. Check the DVD player unit operation.

Does the DVD player unit operate normally?

YES - Operation is normal at this time.

NO - Go to step 2.

2. Substitute a known-good disc and recheck.

Is it normal?

YES - Original disc is faulty.

NO - Substitute a known-good audio unit and recheck. If the symptom/indicated goes away, replace the

original audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

WIRELESS REMOTE CONTROL ILLUMINATION DOES NOT COME ON

1. Check the wireless remote control operation.

Does the illumination for all the buttons come on (10 seconds)?

YES - Operation is normal at this time.

NO - Go to step 2.

2. Replace the batteries in the wireless remote control and recheck (see **WIRELESS REMOTE CONTROL BATTERY REPLACEMENT**).

Does the wireless control illumination come on?

YES - The original batteries were faulty.

NO - Replace the wireless remote control.

REAR CONTROLLER AND SCREEN REMOVAL/INSTALLATION

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the headliner and display cover.

1. Remove the display cover.

Fig. 36: Identifying Display Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the mounting bolts, disconnect the connectors (A) from the rear controller and screen.

Fig. 37: Identifying Rear Controller And Screen Connectors

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the wireless remote control (A).

Fig. 38: Identifying Wireless Remote Control, Cable And Rear Indicator

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws from the rear indicator (B).
5. Disconnect the cable (C) from the rear indicator.
6. Remove the screws, then remove the rear indicator sub printed circuit board (A).

Fig. 39: Identifying Rear Indicator Sub Printed Circuit Board
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the screws, then remove the screen (A) and base (B). Disconnect the cable (C).

Fig. 40: Identifying Screen, Base And Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the screws and lock switches (A),

Fig. 41: Identifying Lock Switches

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the cable (A), then remove the screws and the rear control main printed circuit board (B).

Fig. 42: Identifying Rear Control Main Printed Circuit Board And Cable

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the parts in the reverse order of removal, and make sure the rear controller and screen connector are plugged in properly.

AUXILIARY JACK ASSEMBLY REPLACEMENT

WITH REAR ENTERTAINMENT

1. Gently pull out the console rear trim (A).

Fig. 43: Identifying Console Rear Trim And Auxiliary Jack Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 14P connector (B), and remove the auxiliary jack assembly (C).
3. Carefully pry out the auxiliary jack assembly.

WIRELESS HEADPHONE BATTERY REPLACEMENT

1. Remove the battery cover (A) from the wireless headphone and lift the cover.

Fig. 44: Identifying Battery Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the battery (B) from the wireless headphone.

Replacement Battery Size: AAA

3. Turn the left earpiece (A), and confirm that the indicator (B) comes on after the battery is replaced.

Fig. 45: Identifying Left Earpiece

Courtesy of AMERICAN HONDA MOTOR CO., INC.

WIRELESS REMOTE CONTROL BATTERY REPLACEMENT

1. Remove the cover (A) from the remote control.

Fig. 46: Identifying Cover From Remote Control

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the batteries (B).

Replacement Battery: BR3032

3. Confirm that each operation works normally after replacing the batteries.

Seat Belts - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Seat Belts Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT BELT REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX) and the precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or service.

NOTE: Check the front seat belts for damage (see SEAT BELT BUCKLE/SEAT BELT DETACHABLE ANCHOR), and replace them if necessary.

FRONT SEAT BELT

1. Slide the front seat all the way forward, and adjust the seat to its maximum height. Carefully pry up on the bottom of the anchor cover (A) to release the tab (B) with a small flat-tip screwdriver from below inside the recline cover (C), then remove it.

Fig. 2: Identifying Anchor Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Adjust the seat to its minimum height, then remove the lower anchor bolt (A).

Fig. 3: Identifying Lower Anchor Bolt Tightening Torque

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**), and wait at least 3 minutes before removing the front seat belt.
4. Remove the B-pillar lower trim (see **B-PILLAR UPPER/LOWER TRIM**).
5. Remove the B-pillar upper trim (see **B-PILLAR UPPER/LOWER TRIM**).
6. Remove the upper anchor bolt (A).

Fig. 4: Identifying Upper Anchor Bolt Tightening Torque
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the seat belt tensioner connector (A). Remove the upper retractor mounting bolt (B) and the lower retractor bolt (C), then remove the front seat belt (D) and retractor (E).

Fig. 5: Identifying Retractor And Bolts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If necessary, remove the front seat belt protector (F).
9. Remove the shoulder anchor adjuster (A).

Fig. 6: Identifying Shoulder Anchor Adjuster And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the seat belt in the reverse order of removal, and note these items:
 - Apply medium strength type liquid thread lock to the anchor bolts before reinstallation.
 - Tighten the bolts by hand first, then tighten to the specified torque.
 - Check that the retractor locking mechanism functions as described (see **RETRACTOR**).
 - Assemble the washer, collar, and bushing on the upper anchor bolt as shown.
 - If the seat belt tensioner has been deployed, replace the front seat belt protector with a new one.
 - Before installing the anchor bolts, make sure there are no twists or kinks in the seat belt.
 - Make sure the seat belt tensioner connector is properly plugged in.
 - Do the battery terminal reconnection procedure(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
 - Check for any DTCs that may have been set during repairs, and clear them.

SEAT BELT BUCKLE

1. Do the battery terminal disconnection procedure(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**), and wait at least 3 minutes before beginning work.
2. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
3. Remove the center cover (see step 4 on **CENTER CONSOLE REMOVAL/INSTALLATION**).
4. Lift up the front seat, then disconnect the seat belt buckle switch connector (A) and detach the harness clip (B). The driver's seat is shown; the passenger's seat is similar.

Fig. 7: Identifying Seat Belt Buckle Switch Connector And Harness Clip
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the center anchor bolt (A) and detach the harness clips (B), then remove the seat belt buckle (C).

Fig. 8: Identifying Center Anchor Bolt, Harness Clips And Seat Belt Buckle With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pull the seat belt buckle switch harness (D) out through the space between the seat cushion and the seat linkage.
7. Install the buckle in the reverse order of removal, and note these items:
 - Assemble the washers on the center anchor bolt as shown.
 - Apply medium strength type liquid thread lock to the center anchor bolt before reinstallation.
 - Tighten the bolts by hand first, then tighten to specification with a torque wrench.
 - Make sure the seat belt buckle switch connector is plugged in properly.
 - Do the battery terminal disconnection procedure(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**), and wait at least 3 minutes before beginning work.
 - Check for any DTCs that may have been set during repairs, and clear them.

Center anchor bolt installation

Fig. 9: Identifying Center Anchor Bolt Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SECOND ROW SEAT BELT REPLACEMENT

NOTE: Check the second row seat belts for damage (see SEAT BELT BUCKLE/SEAT BELT DETACHABLE ANCHOR), and replace them if necessary.

SECOND ROW SEAT BELT

1. Slide the second row seat forward fully.
2. Remove the rear side trim panel (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA).
3. Pull the carpet (A) back, and remove the lower anchor bolt (B).

Fig. 10: Identifying Lower Anchor Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the seat belt exit C-pillar cap (A).
 1. Pull out the rear upper corner of the cap to release the upper hook (B) and the rear hook (C).

2. Release the front hook (D) and lower hook (E) together by pulling the cap upward and rearward.
3. Take the cap off the second row seat belt (F).

Fig. 11: Identifying Seat Belt Exit C-Pillar Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the upper anchor bolt (A).

Fig. 12: Identifying Upper Anchor Bolt With torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Detach the clip (A) by pulling the bottom of the quarter pillar trim (B) back. While holding the trim away from the C-pillar, pull the second row seat belt, upper anchor (C), tongue plate (D), and the lower anchor (E) into the trim, and pull the entire second row seat belt down.

Fig. 13: Identifying Second Row Seat Belt, Upper Anchor, Tongue Plate And Lower Anchor
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the upper retractor mounting bolt (A) and the lower retractor bolt (B), then remove the front seat belt (C) and retractor (D). The left second row seat belt is shown; the right second row seat belt is similar.

Fig. 14: Identifying Retractor And Bolt With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the seat belt in the reverse order of removal, and note these items:
 - Apply medium strength type liquid thread lock to the anchor bolts before reinstallation.
 - Tighten the bolts by hand first, then tighten to the specified torque.
 - Check that the retractor locking mechanism functions (see **RETRACTOR**).
 - Assemble the washers, collar, and bushing on the upper anchor bolt as shown.

- Before installing the anchor bolts, make sure there are no twists or kinks in the second row seat belt.

Upper anchor bolt installation

Fig. 15: Identifying Upper Anchor Bolt Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LEFT SEAT BELT BUCKLE

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the left second row seat (see SECOND ROW SEAT REMOVAL/INSTALLATION).
2. From under the seat cushion, release the hooks of the back cover carpet from the seat cushion frame, then pull the carpet back (see step 2 on LEFT SECOND ROW SEAT).
3. With seat heater: Disconnect the seat cushion heater connector, and remove the wire ties (see step 3 on LEFT SECOND ROW SEAT).
4. Remove these items:
 - Recline outer cover (see step 5 on RIGHT SECOND ROW SEAT)
 - ISO-FIX bracket outer cover (see step 6 on LEFT SECOND ROW SEAT)
5. Remove the seat cushion from the left second row seat (see step 10 on LEFT SECOND ROW SEAT).
6. Remove the center anchor bolt (A), and remove the seat belt buckle (B).

Fig. 16: Identifying Center Anchor Bolt And Seat Belt Buckle With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the buckle in the reverse order of removal, and note these items:
 - Apply medium strength type liquid thread lock to the anchor bolt before reinstallation.
 - Assemble the washers, collar and bushing on the center anchor bolt as shown.

Center anchor bolt installation

Fig. 17: Identifying Center Anchor Bolt Installation
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

RIGHT SEAT BELT BUCKLE

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the right second row seat (see [SECOND ROW SEAT REMOVAL/INSTALLATION](#)).
2. Remove these items:
 - Recline outer cover (see step 5 on [RIGHT SECOND ROW SEAT](#))
 - Center outer cover (see step 7 on [RIGHT SECOND ROW SEAT](#))

3. Using a TORX T30 bit, remove the pivot bolts (A), then carefully lift the seat cushion (B) up as needed.

Fig. 18: Identifying Pivot Bolts And Seat Cushion With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the center anchor bolt (A), and remove the seat belt buckle (B).

Fig. 19: Identifying Center Anchor Bolt And Seat Belt Buckle With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the buckle in the reverse order of removal, and note these items:
 - Apply medium strength type liquid thread lock to the anchor bolt before reinstallation.
 - Assemble the washers, collar, and bushing on the center anchor bolt as shown.

Center anchor bolt installation

Fig. 20: Identifying Center Anchor Bolt Installation
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

CENTER SECOND ROW SEAT BELT

1. Detach the clips, and remove the seat belt cover (A).

Fastener Locations

▷ : Clip, 4
 (Green)

Fig. 21: Identifying Seat Belt Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the headliner(see [HEADLINER REMOVAL/INSTALLATION](#)).
3. Remove the upper anchor mounting bolt (A) and upper anchor bolts (B), then remove the upper anchor (C).

Fig. 22: Identifying Upper Anchor Mounting Bolt And Upper Anchor Bolts Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the retractor mounting bolt (A) and retractor bolt (B), then remove the retractor (C).

Fig. 23: Identifying Retractor Mounting Bolt And Retractor Bolt Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the center second row seat belt and retractor in the reverse order of removal, and note these items:
- If the clips are damaged or stress-whitened, replace them with new ones.
 - Apply medium strength type liquid thread lock to the anchor bolts before reinstallation.
 - Check that the retractor locking mechanism functions (see **RETRACTOR**).
 - Before installing the upper anchor bolt, make sure there are no twists or kinks in the seat belt.

NOTE: Take care not to tear the seams or damage the seat covers.

1. Slide the right second row seat fully forward.
2. Remove the ISO-FIX bracket outer cover (see step 6 on **LEFT SECOND ROW SEAT**).
3. Remove the center anchor bolt (A), and remove the seat belt buckle (B) from the elastic strap (C), then remove it through the space between the link bracket and seat cushion.

Fig. 24: Identifying Center Anchor Bolt, Seat Belt Buckle And Elastic Strap With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the buckle in the reverse order of removal, and apply medium strength type liquid thread lock to the anchor bolt before reinstallation.

CENTER SECOND ROW SEAT BELT DETACHABLE ANCHOR

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the left second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the seat belt detachable anchor (A) from the elastic strap (B).

Fig. 25: Identifying Seat Belt Detachable Anchor And Elastic Strap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the lower anchor bolt (A).

Fig. 26: Identifying Lower Anchor Bolt Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the seat belt detachable anchor (A).

Fig. 27: Identifying Seat Belt Detachable Anchor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the detachable anchor in the reverse order of removal, and apply medium strength type liquid thread lock to the anchor bolt before reinstallation.

THIRD ROW SEAT BELT REPLACEMENT

THIRD ROW SEAT BELT

NOTE: Check the third row seat belts for damage (see SEAT BELT BUCKLE/SEAT BELT DETACHABLE ANCHOR), and replace them if necessary.

1. Detach the third row seat belt lower anchor.
2. Remove the rear side trim panel (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA).
3. Remove the seat belt exit D-pillar cap (A).
 1. Pull out the top of the cap to release the hooks (B).
 2. Release the lower hook (C) by pulling the cap upward.
 3. Take the cap off the third row seat belt (D).

Fig. 28: Identifying Seat Belt Exit D-Pillar Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the quarter pillar trim (see **QUARTER PILLAR TRIM**).
5. Remove the bolts (A) and the seat belt guide (B).

Fig. 29: Identifying Bolts And Seat Belt Guide With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the upper anchor bolt (A).

Fig. 30: Identifying Upper Anchor Bolt Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the retractor mounting bolt (A) and the retractor bolt (B), then remove the third row seat belt (C) and retractor (D).

Fig. 31: Identifying Retractor And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the seat belt in the reverse order of removal, and note these items:
 - Apply medium strength type liquid thread lock to the anchor bolts before reinstallation.
 - Tighten the bolts by hand first, then tighten to the specified torque.
 - Check that the retractor locking mechanism functions as described (see **RETRACTOR**).
 - Assemble the washers and bushing on the upper anchor bolt as shown.

- Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.

Upper anchor bolt installation

Fig. 32: Identifying Upper Anchor Bolt Installation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT BELT BUCKLE/SEAT BELT DETACHABLE ANCHOR

NOTE: The seat belt buckle is shown, and the seat belt detachable anchor is similar.

1. Remove the third row seat (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the screw (A), and release the hook (B), then remove the bracket cover (C).

Fig. 33: Identifying Screw, Hook And Bracket Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the center anchor bolt (A), then remove the seat belt buckle (B).

Fig. 34: Identifying Center Anchor Bolt And Seat Belt Buckle With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the buckle in the reverse order of removal, and note these items:
 - Assemble the washers, spring, bushing, bracket, and collar on the center anchor bolt as shown.
 - Apply medium strength type liquid thread lock to the center anchor bolt before reinstallation.

Fig. 35: Identifying Washers, Spring, Bushing, Bracket, Collar And Center Anchor Bolt
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

OUT OF VEHICLE

For front seat belt retractor with seat belt tensioner, review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

RETRACTOR

1. Before installing the retractor, check that the seat belt can be pulled out freely.

2. Make sure that the seat belt does not lock when the retractor (A) is leaned slowly up to 15° from the mounted position. The seat belt should lock when the retractor is leaned over 40° . Do not attempt to disassemble the retractor.

Front

Second row

Fig. 36: Identifying Seat Belt Retractor Movement (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 37: Identifying Seat Belt Retractor Movement (2 Of 2)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Replace the seat belt with a new assembly if there is any abnormality. Do not disassemble any part of the seat belt for any reason.

IN-VEHICLE

1. Check that the seat belt is not twisted or caught on anything.
2. After installing the anchors, check for free movement on the anchor bolts. If necessary, remove the anchor bolts and check that the washers and other parts are not damaged or improperly installed.
3. Check the seat belts for damage or discoloration. Clean with a shop towel if necessary. Use only soap and water to clean.

NOTE: Dirt build up in the loops of the upper anchors can cause the seat belts to retract slowly. Wipe the inside of the loops with a clean cloth dampened in isopropyl alcohol.

4. Check that the seat belt does not lock when pulled out slowly. The seat belt is designed to lock only during a sudden stop or impact.
5. Make sure that the seat belt will retract automatically when released.
6. For each passenger's seat belt, check the seat belt retractor locking mechanism ALR (automatic locking retractor). This function is for securing child seats.

1. Pull the seat belt all the way out to engage the ALR. The seat belt should retract, but not extend. This is normal.
2. To disengage the ALR, release the seat belt and allow it to fully retract, then pull the seat belt out part-way. The seat belt should retract and extend normally.
7. Replace the seat belt with a new assembly if there is any abnormality. Do not disassemble any part of the seat belt for any reason.

THIRD ROW CHILD SEAT TETHER ANCHOR REPLACEMENT

1. Remove the rear trim panel (see step 2 on **TRIM REMOVAL/INSTALLATION - CARGO AREA**).
2. Remove the screws (A), and remove the third row child seat tether anchors (B).

Fig. 38: Identifying Screws And Third Row Child Seat Tether Anchors With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the anchor in the reverse order of removal, and apply medium strength type liquid thread lock to the threads of the child seat tether anchor screws.

2007-09 ACCESSORIES AND EQUIPMENT

Seats - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Seats Components Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT ACTIVE HEAD RESTRAINT INSPECTION

NOTE: If the vehicle has been in a collision, always inspect the active head restraint, even if they appear reusable, by doing the following procedure.

RESETTING HEAD RESTRAINT POSITION

1. Push the head restraint (A) forward fully from the locked position to return the inside inertia lock (B).

Fig. 2: Identifying Head Restraint And Inertia Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slowly raise the head restraint into the normal position.

Inspection

3. Fold the seat-back forward, then recline the seat-back to the first lock position, and adjust the head restraint to the highest position.
4. Apply masking tape on the top of the head restraint.
5. Make marks (A) on both sides at 285 mm (11.2 in.) upward from the roots of the head restraint frame (B) along the back of the head restraint (C) surface. Make a center of these points as a datum point (D).

Fig. 3: Identifying Marks On Head Restraint Frame And Head Restraint
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Push the head restraint (A) forward, and check: With a scale, measure the level amount of the head restraint movement. The head restraint should move more than 50 mm (2.0 in.) without resistance. If it is less than 50 mm (2.0 in.), or the head restraint doesn't move smoothly, replace the seat-back frame (see **FRONT SEAT-BACK COVER REPLACEMENT**).

Fig. 4: Identifying Head Restraint

FRONT SEAT REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT**

LOCATION INDEX) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Put on gloves to protect your hands.
- When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.
- Take care not to scratch the body or tear the seat covers.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Make sure you have the anti-theft codes for the audio system and the navigation system (if equipped).
2. Tilt the steering wheel all the way up, and telescope it all the way in.
3. Slide the front seat all the way forward, and adjust the seat to its maximum height. Carefully pry up on the bottom of the anchor cover (A) to release the tab (B) with a small flat-tip screwdriver from below inside the recline cover (C), then remove it.

Fig. 5: Identifying Anchor Cover And Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Adjust the seat to its minimum height, then remove the lower anchor bolt (A).

Fig. 6: Identifying Lower Anchor Bolt With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's side with navigation system: Gently pull the navigation unit cover (A) up to detach the clips, then remove the cover.

Fig. 7: Identifying Navigation Unit Cover And Navigation Unit Connectors
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's side with navigation system: Disconnect the navigation unit connectors (B).
7. Slide the seat all the way forward and remove the rear outer seat track end cover (A) and the rear inner seat track end cover (B).

Fig. 8: Identifying Navigation Unit Connectors And Rear Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolts.

Fig. 9: Identifying Rear Outer Seat Track End Cover Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Slide the seat all the way back, and remove the front outer seat track end cover (A) and the front inner seat track end cover (B).

Fig. 10: Identifying Front Outer Seat Track End Cover And Front Inner Seat Track End Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the bolts.

Fastener Locations

► : Bolt, 2

Fig. 11: Identifying Front Inner Seat Track End Cover Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect the negative cable from the battery, and wait at least 3 minutes before removing the seat.
12. Lift up the front seat, then disconnect the power seat harness connector (A) and the side airbag connector (B). Disconnect the ODS unit connector (C) on the passenger's seat.

Driver's seat

Fig. 12: Identifying Power Seat Harness Connector And Side Airbag Connector (Driver'S Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat

Fig. 13: Identifying Power Seat Harness Connector And Side Airbag Connector (Passenger's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the head restraint.
14. With the help of an assistant, carefully remove the front seat through the front door opening.
15. Install the seat in the reverse order of removal, and note these items:
 - Make sure the seat harnesses (A) are routed correctly.
 - Apply medium strength type liquid thread lock to the seat mounting bolts before reinstallation.
 - Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten (1) and (2), then slide it forward and tighten (3) and (4). The driver's seat is shown; the passenger's seat is symmetrical.

- Make sure each connector is plugged in properly.
- Tighten the bolts by hand first, then tighten them to specification with a torque wrench.
- Reconnect the negative cable to the battery.
- Enter the anti-theft codes for the audio system and the navigation system (if equipped).
- Set the clock (on vehicles without navigation).
- Check for any DTCs that may have been set during repairs, and clear them.
- Do the steering column position memorization (see **STEERING COLUMN POSITION MEMORIZATION**).

Fig. 14: Identifying Seat Harnesses And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT DISASSEMBLY/REASSEMBLY

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT**

LOCATION INDEX) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Put on gloves to protect your hands.
- Take care not to tear the seams or damage the seat covers.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- DTC codes will set if the ignition is turned ON (II) with the seats removed.

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the screws and release the hook (A), tabs (B), then remove the front cover (C).

Fastener Locations

► : Screw, 3

Fig. 15: Identifying Front Cover, Hook And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the recline cover (A).
 1. Remove the screw (B) and detach the clip (C) and hooks (D).
 2. Pull up the cover, then detach the hooks (E, F).
 3. Disconnect the recline switch and up-down switch connector (G), and on the driver's seat, lumbar support switch connector (H).
 4. Remove the wire harness (I) from the hook (J).

Fig. 16: Identifying Recline Cover, Wire Harness, Hook And Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the center cover (A).
 1. Release the hooks (B).
 2. Pull up the cover, then detach the hook (C).

Fig. 17: Identifying Center Cover And Hooks
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. From under the seat cushion, release the hook strips (A) and pull the seat cushion cover (B) back. Detach the clip fastening the harness sock (C). Disconnect or detach the connectors, detach the harness clips (D), release the wire ties (E), then pull out the harness(es) out through the harness sock.
 - Driver's seat
 - Side airbag connector (F)
 - Seat-back heater harness connector (G)

- Recline motor/lumbar support motor harness connector (H)
- Passenger's seat
 - Side airbag connector (F)
 - ODS unit harness connector (I)
 - Recline motor harness connector (J)

Driver's seat

Passenger's seat

Fig. 19: Identifying Passenger'S Seat Clip (Fastener Location)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove bolts, then remove the seat-back (A).

Fig. 20: Identifying Seat-Back Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Assemble the seat-back and seat cushion in the reverse order of disassembly, and note these items:
 - Passenger's seat: Calibrate the ODS unit (see **ODS UNIT OPERATION CHECK**).
 - Check if the clips are damaged, and if necessary, replace it with new ones.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Seats - MDX

- Push the clip and hooks on the covers into place securely.
- Apply multipurpose grease to the moving parts of the seat track.
- Replace the wire ties you removed with new ones.
- Make sure each connector is plugged in properly.
- To prevent wrinkles in the seat cushion cover, stretch the material evenly over the pad before securing the hook strips.

FRONT SEAT LINKAGE DISASSEMBLY/REASSEMBLY

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

DRIVER'S SEAT CUSHION FRAME DISASSEMBLY/REASSEMBLY

- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):
 - Driver's seat position sensor replacement
 - Cover plate (front side of driver's seat slide rail) replacement

NOTE:

- Put on gloves to protect your hands.
- Apply multipurpose grease to the sliding portions and pivot portions of the seat tracks.

Fig. 21: Exploded View Of Front Seat Linkage With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PASSENGER'S SEAT CUSHION FRAME DISASSEMBLY/REASSEMBLY

- Calibrate the ODS unit after any of these actions (see **ODS UNIT CALIBRATION**):
 - Front passenger's seat replacement (including any seat components)
 - Replacement of the seat weight sensors
 - Replacement of the ODS unit

NOTE:

- Put on gloves to protect your hands.
- Apply multipurpose grease to the sliding portions of the seat tracks.

Fig. 22: Exploded View Of Passenger'S Seat Cushion frame With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

LEFT SEAT TRACK/SLIDE MOTOR, RIGHT SEAT TRACK/SLIDE GEARBOX, SLIDE JOINT CABLE, AND UP-DOWN MOTORS REMOVAL/INSTALLATION

- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):
 - Driver's seat position sensor replacement
 - Cover plate (front side of driver's seat slide rail) replacement
- Calibrate the ODS unit after any of these actions (see **ODS UNIT CALIBRATION**):
 - Front passenger's seat replacement (including any seat components)
 - Replacement of the seat weight sensors
 - After a vehicle collision

NOTE: Put on gloves to protect your hands.

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back (see **FRONT SEAT DISASSEMBLY/REASSEMBLY**).
3. Remove the seat cushion cover/pad from the seat cushion frame (see **FRONT SEAT CUSHION COVER REPLACEMENT**).
4. Disconnect each motor connector, then remove these items from the slide/up-down adjuster:
 - Outer height cover
 - Inner height cover
 - Recline inner cover
 - Center inner cover
 - Anchor wire
 - Power seat control unit, driver's seat
 - Harness sock
 - Power seat harness
 - Seat cushion frame
 - Seat cushion springs
 - Harness bracket
 - Floor connector bracket, driver's seat, without navigation system
 - Navigation unit bracket, driver's seat, with navigation system
 - Seat belt buckle (see **SEAT BELT BUCKLE**)
5. Remove the screws, then remove the protector (A).

Fig. 23: Identifying Protector And Screw
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the front bracket mounting nuts (A) and rear pivot bolts (B), then remove the left seat track/ slide motor (C) and right seat track/slide gearbox (D) from the up-down adjuster (E).

Fastener Locations

A ● : Nut, 4 B ► : Bolt, 2

Fig. 24: Identifying Front Bracket Mounting Nuts And Rear Pivot Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect each end of the slide joint cable (F) from the slide gearbox and slide motor.
8. Remove the nuts, then remove the rear bracket (A) and anchorage bracket (B) from the left seat track (C).

Driver's seat

Fastener Locations

● : Nut, 2

Passenger's seat

Fastener Locations

● : Nut, 2

Fig. 28: Identifying Rear Bracket, Anchorage Bracket, Passenger'S Seat And Seat Track (Passenger's Seat) With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the retainer (A) and washer (B) from the up-down screw (C). The front up-down motor is shown; the rear up-down motor is similar.

Fig. 29: Identifying Retainer, Washer And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the spring pin (A) from the bracket (B) and up-down motor (C). The front up-down motor is shown; the rear up-down motor is similar.

Fig. 30: Identifying Spring Pin, Bracket And Up-Down Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull the up-down motor (A) up, and remove the motor by turning it clockwise. The front up-down motor is shown; the rear up-down motor is similar.

Fig. 31: Identifying Up-Down Motor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the nut (A), stopper (B), and bushings (C) from the link (D).

Front up-down motor

Fig. 32: Identifying Stopper, Bushings, Link And Nut (Front Up-Down Motor)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear up-down motor

Fig. 33: Identifying Stopper, Bushings, Link And Nut (Rear Up-Down Motor)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the parts in the reverse order of removal, and note these items:

- Before installing the seat tracks (A) to the up-down adjuster, positions of both seat tracks should be aligned:
 - Connect the slide joint cable (B) to the right slide gearbox (C).
 - Manually slide the right seat track fully rearward by rotating the inner cable (D).
 - Disconnect the slide joint cable.
 - Connect the slide joint cable to the slide motor, then slide the left seat track fully rearward in the same way as the right side.
- Apply medium strength type liquid thread lock to the pivot bolts before reinstallation.
- Apply multipurpose grease to the sliding portions and pivot portions of the seat tracks and up-down adjuster.
- Check operations of the slide adjuster and the up-down adjuster.

Fig. 34: Identifying Slide Joint Cable And Right Slide Gearbox

FRONT SEAT RECLINE MOTOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE: Put on gloves to protect your hands.

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove these items:
 - Seat-back cover (see **FRONT SEAT-BACK COVER REPLACEMENT**)
 - Lumbar support motor cover (see step 5 on)
3. Driver's seat: Disconnect the lumbar support motor connector (A), and remove the wire ties (B).

Fig. 35: Identifying Lumbar Support Motor Connector And Wire Ties
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the push nut (A) from the motor side end of the connecting rod (B), gently tap on the motor side of the connecting rod to remove it from the recline motor (C) and both recline adjusters (D).

Fig. 36: Identifying Push Nut, Connecting Rod, Recline Motor And Recline Adjusters
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rod cover (E).
6. Remove the bolt, then remove the recline motor (A).

Fig. 37: Identifying Recline Motor And Rod Cover With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the motor in the reverse order of removal, and note these items:
 - Passenger's seat: Calibrate the ODS unit (see **ODS UNIT CALIBRATION**).
 - Replace the wire ties you removed with new ones.
 - Replace the push nut with a new one. Make sure the push nut is installed correctly.
 - Apply medium strength type liquid thread lock to the mounting bolt before reinstallation.

FRONT SEAT LUMBAR SUPPORT REPLACEMENT

DRIVER'S SEAT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend the cable.
- Take care not to tear the seams or damage the seat covers.

1. Remove the back panel (see step 3).
2. Release the hook of the yoke spring (A) from the top of the basket (B) to loosen the lumbar support cable (C), then disconnect it.

Fig. 38: Identifying Hook Of Yoke Spring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release both lower springs (A) from inside the seat-back. Release the lumbar support from both upper springs (B).

Fig. 39: Identifying Lower Springs And Upper Springs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hook strips (A), then turn over the seat-back cover (B).

Fig. 40: Identifying Hook Strips And Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hooks (A), then remove the lumbar support motor cover (B).

Fig. 41: Identifying Lumbar Support Motor Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the power lumbar support motor connector (A) and remove the nuts, then remove the lumbar support motor (B).

Fastener Locations

● : Nut, 2

Fig. 42: Identifying Lumbar Support Motor And Power Lumbar Support Motor Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the lumbar support in the reverse order of removal, and note these items:
 - Make sure the connector is plugged in properly, and the cable is connected securely.
 - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the hook strips.
 - Replace the back panel clips with new ones.

FRONT SEAT-BACK COVER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**).
 - Driver's seat position sensor replacement
 - Cover plate (front side of driver's seat slide rail) replacement

- Calibrate the ODS unit after any of the these actions (see ODS UNIT CALIBRATION).
 - Front passenger's seat replacement (including any seat components)
 - Replacement of the seat weight sensors
 - After a vehicle collision

NOTE:

- Put on gloves to protect your hands.
- Take care not to tear the seams or damage the seat covers.
- On the passenger's seat, do not touch the OPDS sensor in the seat-back pad, and keep it away from oil. Oil can corrode the sensor causing it to fail.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the front seat (see FRONT SEAT REMOVAL/INSTALLATION).
2. Remove the seat-back (see FRONT SEAT DISASSEMBLY/REASSEMBLY).
3. Detach the clips, release the hooks (A) by pulling the bottom of the back panel (B) back, then gently pull down the panel to release the hooks (C) from the seat-back frame, and remove the panel.

NOTE: Detach the clips and hooks in the numbered sequence as shown.

Fig. 43: Identifying Back Panel And Hooks
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hooks (A), then loosen the seat-back cover (B). Remove the wire ties (C).

Fig. 44: Identifying Hooks And Seat-Back Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pull the recline motor harness/lumbar support motor harness (A) (driver's seat) or recline motor harness (B) (passenger's seat), seat-back heater harness (C), side airbag harness (D) and the ODS unit harness (E) (passenger's seat) out through the holes (F) in the seat-back cover.

Driver's seat-back

Fig. 45: Identifying Recline Motor Harness And Lumbar Support Motor Harness (Driver'S Seat-Back)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat-back

Fig. 46: Identifying Recline Motor Harness And Lumbar Support Motor Harness (Passenger'S Seat-Back)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Passenger's seat: Turn over the seat-back cover (A), detach the hooks (B), then remove the ODS unit cover (C). Disconnect the OPDS sensor connectors (D), then detach the harness clips (E).

Fig. 47: Identifying Seat-Back Cover, Hooks And ODS Unit Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Release the front hook (A) and rear hook (B) of the reinforcing cloth (C) from seat-back frame (D).

Fig. 48: Identifying Front Hook, Rear Hook And Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pull out the head restraint guides (A) while pinching the tabs on the end of the guides, and remove them.

Fig. 49: Identifying Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the seat-back cover (A) and seat-back pad (B) from the seat-back frame (C).

Fig. 50: Identifying Seat-Back Cover, Seat-Back Pad And Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Pull back the edge of the seat-back cover all the way around, and release the clips (A), then remove the seat-back cover.

Fig. 51: Identifying Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the cover in the reverse order of removal, and note these items:
 - Reinitialize the ODS unit (see **ODS UNIT INITIALIZATION**).
 - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips, hooks, and hook strips.
 - Replace any clips you removed with new ones (A). Install them with commercially available

upholstery ring pliers (B).

- Reinstall the front hook (C) and rear hook (D) of the reinforcing cloth (E) securely.
- Use only original Acura replacement seat-back covers.
- Make sure the recline motor harness/lumbar support motor harness (driver's seat) or recline motor harness (passenger's seat), side airbag harness, seat-back heater harness, and ODS unit harness (passenger's seat) are routed properly.
- Replace the back panel clips with new ones.

10. Remove the seat cushion (A).
 1. Remove the seat belt buckles (B) and seat belt detachable anchor (C) from the elastic straps (D).
 2. Remove the nuts (E). Using a TORX T30 bit, remove the bolts (F).

Fig. 75: Identifying Seat Cushion, Seat Belt Buckles And Seat Belt Detachable Anchor
Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the screw, then remove the front center outer cover (A).

Fig. 76: Identifying Front Center Outer Cover And Screw

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Using a TORX T40 bit, remove the bolts (A, B), then remove the seat-back (C) and bushing (D).

Fig. 77: Identifying Seat-Back, Bushing And Bolts Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Assemble the seat-back and seat cushion in the reverse order of disassembly, and note these items:
- If the bushing is damaged or stress-whitened, replace it with a new one.
 - Replace any damaged clips with new ones.
 - Push the clips and hooks into place securely.
 - With seat heater: Replace the wire tie you removed with a new one.
 - With seat heater: Make sure the seat-back heater connector is plugged in properly.

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

RIGHT SECOND ROW SEAT

NOTE:

- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when

removing components.

- Take care not to scratch the body or tear the seat covers.

1. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
2. From under the seat cushion, release the hook (A) of the back cover carpet from the seat cushion frame, then pull the carpet (B) back.

Fig. 78: Identifying Second Row Seat Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the wire ties (C) fastening the recline cables (D).
4. With seat heater: Disconnect the seat-back heater connector (E) and detach the seat heater connector (F).
5. Gently pull out the recline outer cover (A) to detach the clips and to release the hooks (B) of the recline inner cover (C), then remove the cover while releasing the inside edge of the cover from the recline adjuster (D).

Fastener Locations

10. Disconnect the recliner cables (A) and the third row seat access rods (B) on both sides, then remove the cables from the clips (C).

Fig. 84: Identifying Recliner Cables, Third Row Seat Access Rods And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Using a TORX T40 bit, remove the bolts, then remove the seat-back (A).

Fastener Locations

► : Bolt, 4

Fig. 85: Identifying Seat-Back And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Assemble the seat-back and seat cushion in the reverse order of disassembly, and note these items:
- If the cable clips and rod fasteners are damaged or stress-whitened, replace them with new ones.
 - Replace any damaged clips with new ones.
 - Push the clips and hooks into place securely.
 - Apply multipurpose grease to the moving parts of the seat track.
 - Replace the wire ties you removed with new ones.
 - Make sure each cable is connected securely.
 - With seat heater: Make sure the seat-back heater connector is plugged in properly.

SECOND ROW SEAT-BACK RECLINE LEVER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Take care not to tear the seams or damage the seat covers.
- Take care not to kink the cables.
- Use the appropriate tool from the KTC trim tool set to avoid damage when

removing components.

1. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back cover/pad from the seat-back frame (see **SECOND ROW SEAT COVER REPLACEMENT**).
3. Right second row seat: Remove these items:
 - Recline outer cover (see step 4)
 - Center outer cover (see step 6)
4. Remove the screws securing the recline lever (A).

Fastener Locations

► : Screw, 2

**Fig. 86: Identifying Recline Lever**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left second row seat: Detach the clips (A) and disconnect the recline outer cable (B) and the recline inner cable (C).

Fig. 87: Identifying Second Row Seat Clips And Recline Inner Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Right second row seat: remove the wire ties (A) and detach the clips (B), disconnect the recline outer cable (C) and the recline inner cable (D), then remove the cables from the clips (E).

Fig. 88: Identifying Second Row Seat Back Clip And Outer Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the recline lever in the reverse order of removal, and note these items:
- Make sure each cable is connected securely.
 - Fix at the middle groove in the end of the recline inner cable (A) securely to obtain no clearance between the cable end and the recline lever fitting.
 - Fix at the middle groove in the end of the recline outer cable (B) securely to obtain a clearance between the cable end and the recline lever fitting.
 - Check the seat-back fold down operation:
 - Left second row seat: When operating the recline lever, the inner recline adjuster is unlocked first, the outer recline adjuster is unlocked next, then the seat-back is folded down fully.
 - Right second row seat: When operating the recline lever, the inner recline adjuster is unlocked first, the outer recline adjuster is unlocked next, then the seat-back is folded down fully without any interference in movement, but the seat doesn't slide forward.
 - The right second row seat is shown; the left second row seat is similar.

Fig. 89: Identifying Inner Cable And Outer Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SECOND ROW SEAT-BACK RECLINE CABLE REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to bend the cable.

1. Remove the seat-back recline lever (see **SECOND ROW SEAT-BACK RECLINE LEVER REPLACEMENT**).
2. Carefully pry out the cover (A) with a flat-tip screwdriver at the gap while holding the lever fully open. Release the tabs (B), then remove the cover.

Fig. 90: Identifying Second Row Seat-Back Cover And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the recline cables (A).

Fig. 91: Identifying Recline Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the second row seat-back recline cables in the reverse order of removal, and make sure the cables are connected securely.

THIRD ROW SEAT ACCESS CABLE REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend the cable.

1. Remove the right second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the right second row seat-back cover/pad from the seat-back frame (see **SECOND ROW SEAT COVER REPLACEMENT**).
3. Disconnect the third row seat access cables (A) and detach the clips (B), then remove the cable by pinching the hooks (C) of the holder.

Fig. 92: Identifying Third Row Seat Access Cables And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the cable in the reverse order of removal, and note these items:
 - Make sure each cable is connected securely.
 - If necessary, remove the clip (A), then adjust the inner side end of the third row seat access cables (B) to obtain no clearance between the cable end and the recline lever fitting.
 - Fix at the middle groove in the outer side end of the third row seat access cable to obtain a clearance between the cable end and the recline lever fitting.
 - Check the third row seat access operation: When operating the third row seat access knob, the inner recline adjuster is unlocked first, the outer recline adjuster is unlocked next, then the seat-back is tilted forward and the seat is allowed to slide forward.

Fig. 93: Identifying Third Row Seat Clip And Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SECOND ROW SEAT ARMREST REPLACEMENT

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the ISO-FIX bracket outer cover (see step 6 on).
2. Using a TORX T30 bit, remove the bolt, then remove the washer (A) and wave washer (B).

Fastener Location

► : Bolt, 1

Fig. 94: Identifying Second Row Seat Wave Washer And Washer With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the armrest.

1. Slide the armrest (A) toward the left side of the vehicle.
2. Remove the pivot shaft (B) from the bushings (C) on the passenger's side of the vehicle by pulling up on the armrest, and remove the pivot shaft from the bushing (D) by pulling up on the armrest.

Fig. 95: Identifying Armrest, Pivot Shaft And Bushings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the armrest (A) and bushings (B).

Fig. 96: Identifying Armrest And Bushings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the armrest in the reverse order of removal, and check if the bushing are damaged or stress-whitened, and if necessary, replace them with new ones.

SECOND ROW SEAT ARMREST BEVERAGE HOLDER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to tear the seams or damage the seat covers.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components. :

1. Detach the hooks (A), then remove the beverage holder cover (B).

Fig. 97: Identifying Hooks And Beverage Holder Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws, then pull out on the beverage holder (A) to release the hooks (B).

Fig. 98: Identifying Beverage Holder And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the beverage holder in the reverse order of removal.

SECOND ROW SEAT ARMREST PANEL REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to tear the seams or damage the seat covers.

1. Remove the armrest, (see SECOND ROW SEAT ARMREST REPLACEMENT).
2. Remove the center head restraint.
3. Pull out the head restraint guides (A) while pinching the end of the guides, and remove them.

Fig. 99: Identifying Head Restraint Guides

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws, gently pull out the rear armrest cover (A) to release the hooks (B) of the armrest panel (C), then remove the cover.

Fig. 100: Identifying Rear Armrest Cover, Hooks And Armrest Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pull back the ISO-FIX trim (A).

Fig. 101: Identifying ISO-FIX Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the armrest panel (A).
 1. Remove the screws (B).
 2. Gently pull out the armrest panel to detach the clip (C) and to release the hooks (D).

Fig. 102: Identifying Armrest Panel And Screw

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the armrest panel in the reverse order of removal, and note these items:
 - Replace the clip if it's damaged.
 - Push the clip and hooks on the panel into place securely.

SECOND ROW SEAT COVER REPLACEMENT

NOTE:

- Put on gloves to protect your hands.

- Take care not to tear the seams or damage the seat covers.

SEAT-BACK COVER

1. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the head restraint.
3. From under the seat cushion, release the hooks (A) of the back cover carpet (B) from the seat cushion frame, then pull the carpet back.

Left second row seat

8. While pulling the recline lever (A), gently pull out the recliner lever upper housing (B) to release the hooks (C), then remove it.

Fig. 110: Identifying Recline Lever

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Release the hook strips (A).

Fig. 111: Identifying Hook Strips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Pull out the seat-back pad (A) from the seat-back frame (B), then pinch the end of the head restraint guides (C) to remove them.

Fig. 112: Identifying Seat-Back Pad

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Pull out the head restraint guides (A).

Fig. 113: Identifying Head Restraint Guides

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Left seat-back

Fig. 114: Identifying Seat-Back Cover, Pad And Seat-Back Frame (Left Seat-Back)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right seat-back

Fig. 115: Identifying Seat-Back Cover, Pad And Seat-Back Frame (Right Seat-Back)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Pull back the edge of the seat-back cover all the way around, and release the clips (A), then remove the seat-back cover.

Fig. 116: Identifying Seat-Back Cover And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Right second row seat: If necessary, remove the seat-back damper (A) from the seat-back frame.

Fig. 117: Identifying Seat-Back Damper With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the seat-back cover in the reverse order of removal, and note these items:
- To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the hooks, hook strips, and clips.
 - Replace any clips (A) you removed with new ones using commercially available upholstery ring pliers (B).
 - Replace the wire ties you removed with new ones.
 - With seat heater: Make sure the seat heater connector is plugged in properly.

Fig. 118: Identifying Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT CUSHION COVER

1. Remove the second row seat (see SECOND ROW SEAT REMOVAL/INSTALLATION).
2. Remove the recline outer cover:
 - Left second row seat (see step 4 on)
 - Right second row seat (see step 5 on)
3. From under the seat cushion, release the hooks (A) of the back cover carpet (B) from the seat cushion frame, then pull the carpet back.

Left second row seat

Fig. 119: Identifying Hooks And Back Cover Carpet (Left Second Row Seat)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right second row seat

Fig. 120: Identifying Hooks And Back Cover Carpet (Right Second Row Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With seat heater: Disconnect the seat-back heater connector (C), detach the seat heater connector (D), and remove the wire ties (E).
5. Release all of the clip (A) and hook strips (B) from under the seat cushion (C).

Left seat cushion

Fig. 121: Identifying Clip, Hook Strips And Seat Cushion (Left Seat Cushion)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right seat cushion

6. Remove the seat cushion cover/pad (A) from the seat cushion frame (B).

Fig. 123: Identifying Seat Cushion Cover, Pad And Seat Cushion Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pass the retainers (A) through the slots in the seat-back pad (left seat cushion). Pull back the edge of the seat cushion cover all the way around, and release the clips (B), then remove the seat cushion cover.

Left seat cushion

Fig. 124: Identifying Retainers And Clips (Left Seat Cushion)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right seat cushion

Fig. 125: Identifying Retainers And Clips (Right Seat Cushion)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the seat-back cover in the reverse order of removal, and note these items:
 - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the hooks, hook strips, and clips.
 - Replace any clips (A) you removed with new ones using commercially available upholstery ring pliers (B).
 - Replace the wire ties you removed with new ones.
 - With seat heater: Make sure the seat-back heater connector is plugged in properly.

Fig. 126: Identifying Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SECOND ROW SEAT ARMREST COVER REPLACEMENT

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the armrest (see SECOND ROW SEAT ARMREST REPLACEMENT).
2. Remove the armrest beverage holder from the armrest (see SECOND ROW SEAT ARMREST BEVERAGE HOLDER REPLACEMENT).
3. Unzip the arm rest cover (A).

Fig. 127: Identifying Arm Rest Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the hooks (A).

**Fig. 128: Identifying Hooks**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pull back the armrest cover (A) all the way around, then separate the armrest cover and pad (B).

**Fig. 129: Identifying Armrest Cover And Pad**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the cover in the reverse order of removal, and to prevent wrinkles, make sure the material is stretched evenly over the pad before securing the hooks.

THIRD ROW SEAT REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the body or tear the seat covers.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Seats - MDX

1. Detach the third row seat-belt from the detachable anchor.
2. Remove the front mounting bolt covers (A) from both front links.

6. With the help of an assistant, remove the third row seat through the tailgate opening.
7. Install the seat in the reverse order of removal, and apply medium strength type liquid thread lock to the seat mounting bolts before reinstallation.

THIRD ROW SEAT DISASSEMBLY/REASSEMBLY

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the body or tear the seat covers.

1. Remove the third row seat (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).
2. Release the hook (A) from under the seat cushion, and pull back the seat cushion cover (B) as needed. Remove the screw and Release the hooks (C), then remove the pivot bolt cover (D) from both sides of the seat.

Fastener Location

► : Screw, 1

Fig. 133: Identifying Hook And Pivot Bolt Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a TORX T30 bit, remove the pivot bolt securing the seat-back (A) and sat cushion (B), then separate them.

Fastener Locations

► : Bolt, 2

Fig. 134: Identifying Pivot Bolt And Cushion With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If necessary, remove the front link cover (A) by releasing the hooks (B).

Fig. 135: Identifying Front Link Cover And Hooks
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the seat-back in the reverse order of removal, and note these items:
 - To prevent wrinkles in the seat cushion cover, make sure the material is stretched evenly over the pad before securing the hook strip.
 - Push the hooks into place securely.

THIRD ROW SEAT LATCH REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend the seat-back recline cable.
- The left third row seat is shown, the right third row seat is similar.

1. Remove the left third row seat or right third row seat (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back (see **THIRD ROW SEAT DISASSEMBLY/REASSEMBLY**).
3. Remove the screws securing the seat-back recline lever (see step 3).
4. Remove the back cover (see step 4), then release the hooks from behind the seat-back, as needed (see step 5).
5. Remove the screw and release the hook (A), then remove the outer latch cover (B).

Fastener Locations

► : Screw, 2

Fig. 136: Identifying Outer Latch Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, remove the screws, then remove the inner latch cover (A).

Fastener Locations

► : Screw, 2

Fig. 137: Identifying Inner Latch Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the seat-back recline cable (A).

Fig. 138: Identifying Seat-Back Recline Cable
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolts, then remove the latch (A).

Fastener Locations

► : Bolt, 2

Fig. 139: Identifying Latch And Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the latch in the reverse order of removal, and note these items:
 - Make sure the seat-back recline cable is connected securely.
 - Make sure the seat unlatches properly and latches securely.

THIRD ROW SEAT PIVOT REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- The left third row seat is shown; the right third row seat is similar.

1. Remove the right third row seat (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back (see **THIRD ROW SEAT DISASSEMBLY/REASSEMBLY**).
3. Remove the screws securing the seat-back recline lever (see step 3).
4. Remove the back cover (see step 4), then release the hooks from behind the seat-back, as needed (see step 5).
5. If necessary, remove the screw, then remove the pivot cover (A).

Fastener Locations

► : Screw, 2

Fig. 140: Identifying Pivot Cover And Screw

7. Install the pivot in the reverse order of removal.

THIRD ROW SEAT-BACK RECLINE LEVER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to kink the seat-back recline cable.

1. Remove the left third row seat or right third row seat (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back (see **THIRD ROW SEAT DISASSEMBLY/REASSEMBLY**).
3. Pry out the lid (A), and remove the screws securing the third row seat-back recline lever (B).

Fig. 142: Identifying Seat-Back Recline Lever And Lid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the back cover (see step 4 , and 5).
5. Remove the outer latch cover (see step 5).
6. Disconnect the seat-back recline cable (see step 7).
7. Remove the clips, then remove the seat-back recline lever (A) with the recline cable (B).

Fastener Locations

▷ : Clip, 2

Fig. 143: Identifying Recline Cable And Seat-Back Recline Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the lever in the reverse order of removal, and note these items:
- If the clips are damaged or stress-whitened, replace them with new ones.
 - Make sure the recline cable is connected securely.
 - Make sure the seat unlatches properly and latches securely.

THIRD ROW SEAT-BACK RECLINE CABLE REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to kink the cable.

1. Remove the third row seat-back recline lever (see **THIRD ROW SEAT-BACK RECLINE LEVER REPLACEMENT**).
2. While holding the lever (A) open, carefully pry out the cover (B) with trim tool to release the tabs (C), then remove the cover.

Fig. 144: Identifying Lever And Tabs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the recline cable (A).

Fig. 145: Identifying Recline Cable

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the third row seat-back recline cable in the reverse order of removal, and note these items:
 - Make sure the cable is connected securely.
 - Make sure the seat unlatches properly and latches securely.

THIRD ROW SEAT COVER REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the interior trim.
- Take care not to tear the seams or damage the seat covers.

SEAT-BACK COVER

1. Remove the third row seat (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).

2. Remove these items.
 - Seat cushion (see **THIRD ROW SEAT DISASSEMBLY/REASSEMBLY**)
 - Head restraint
3. Remove the screws securing the seat-back recline lever (see step 3).
4. Release the three clips (A) at the top of the back cover from the seat-back frame.

Fig. 146: Identifying Seat Back Cover Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the back cover (D) up to release the remaining clips (A, B) from the keyholes on the frame.

Fig. 147: Identifying Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the back cover to pass the recline lever (E) through the hole in the back cover.
7. Release all of the hooks (A; B) from behind the seat-back (C). Unhook the edge of the seat-back cover (D) from the hook (E) of the seat-back frame.

Fig. 148: Identifying Hooks, Seat-Back, Seat-Back Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pull the seat-back cover (A) back, and release the hooks (B).

Fig. 149: Identifying Seat-Back Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pull out the head restraint guides (A) while pinching the tabs (B) on the end of the guides, and remove them.

Fig. 150: Identifying Head Restraint Guides And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the seat-back cover/pad (A) from the seat-back frame (B).

Fig. 151: Identifying Seat-Back Cover, Pad And Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Pull back the edge of the seat-back cover (A) all the way around, then release all of the clips (B). Remove the seat-back cover.

Fig. 152: Identifying Seat-Back Cover And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the seat-back cover in the reverse order of removal, and note these items:
- To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the hook and clips.
 - Replace any clips (A) you removed with new ones using commercially available upholstery ring pliers (B).

Fig. 153: Identifying Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the back cover, and note these items:
- If the clips are damaged or stress-whitened, replace them with new ones.
 - Make sure the clips are positioned properly in the keyholes on the back cover.
 - Align the clips on the back cover with the keyholes on the seat-back frame.
 - Push the clips into place securely.

Fig. 154: Identifying Seat Back Covers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEAT CUSHION COVER

1. Remove both front mounting bolts (see **THIRD ROW SEAT REMOVAL/INSTALLATION**).
2. Release the hook strips (A) from under the seat cushion (B).

Fig. 155: Identifying Hook Strips And Seat Cushion

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pivot bolt cover from both sides (see step 2).
4. Detach the retainers (A) from both sides of the link (B), and release all of the hook strips (C) from under the seat cushion (D).

Fig. 156: Identifying Retainers, Link, Hook Strips And Seat Cushion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the seat cushion cover/pad (A) from the seat cushion frame (B).

Fig. 157: Identifying Cushion Cover, Pad And Seat Cushion Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, release the hooks (C), then remove the suspension mat (D).
7. Pull back the edge of the seat cushion cover (A) all the way around, release all of the clips (B), under the right seat cushion cover, then remove the seat cushion cover.

Fig. 158: Identifying Seat Cushion Cover And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the seat cushion cover in the reverse order of removal, and note these items:
- To prevent wrinkles, make sure the material is stretched evenly over the pad before securing all the clips.
 - Replace all of the clips fastening the seat-back cover (A) and pad wire (B) with new ones (C) using commercially available upholstery ring pliers (D).

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

		Z	2.32 mm (0.0913 in.)	or damaged
		AA	2.34 mm (0.0921 in.)	When worn or damaged
Transfer assembly fluid	Capacity Hypoid gear oil SAE 90 or SAE 80W-90 viscosity, API classified GL4 or GL5 only	Fluid change	0.43 L (0.45 us qt)	
		Overhaul	0.45 L (0.48 us qt)	
Transfer assembly	Diameter of transfer hypoid drive gear/ shaft assembly at tapered roller bearing contact area	Transfer cover side	50.002-50.018 mm (1.9686-1.9692 in.)	49.95 mm (1.9665 in.)
		Transfer gear side	24.987-25.000 mm (0.9837-0.9843 in.)	24.93 mm (0.9815 in.)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	Transfer gear side	40.002-40.018 mm (1.5749-1.5755 in.)	39.95 mm (1.5728 in.)
		Companion flange side	27.975-27.990 mm (1.1014-1.1020 in.)	31.92 mm (1.2567 in.)
	Transfer gear backlash		0.06-0.16 mm (0.002-0.006 in.)	Adjust
	Tapered roller bearing total starting torque (preload)		2.74-4.64 N.m (27.9-47.3 kgf.cm, 24.2-41.1 lbf.in.)	Adjust

REAR DIFFERENTIAL

REAR DIFFERENTIAL SPECIFICATIONS

Item	Measurement	Qualification	Standard or New
Rear differential fluid	Capacity Use Acura ATF-Z1	Fluid change	2.53 L (2.67 US qt)
		Overhaul	2.77 L (2.93 US qt)

STEERING

STEERING SPECIFICATIONS

Item	Measurement	Qualification	Standard or New
Steering wheel	Rotational play measured at outside edge with engine running		0-10 mm (0-0.39 in.)
	Initial turning load measured at outside edge with engine running		29N (3.0 kgf, 6.6 lbf)
Gearbox	Angle of rack guide screw loosened from locked position		15 ± 5°
Pump	Output pressure with shut-off valve closed		8,920-9,420 kPa (91-96 kgf/cm ² , 1,290-1,370 psi)
Power steering fluid	Capacity Use Acura Power Steering Fluid	Reservoir capacity	0.34 L (0.36 US qt)
		System overhaul	1.03 L (1.09 US qt)

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

SUSPENSION

SUSPENSION SERVICE SPECIFICATIONS

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel alignment	Camber	Front	-0°30'±1°	
		Rear	-0°30'±45'	
	Caster	Front	4°12'±35'	
	Total toe-in	Front	0±2mm(0±0.08in.)	
		Rear	2±2 mm (0.08±0.08 in.)	
	Front wheel turning angle	Inward	38°12'±2°	
		Outward (reference)	31°44'	
Wheel	Runout	Axial	0-0.3 mm (0-0.01 in.)	2.0 mm (0.08 in.)
		Radial	0-0.3 mm (0-0.01 in.)	1.5 mm (0.06 in.)
Wheel bearing	End play	Front	0-0.05 mm (0-0.002 in.)	
		Rear	0-0.05 mm (0-0.002 in.)	

BRAKES

BRAKES SERVICE SPECIFICATIONS

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake	Number of clicks when pedal pressed with 294 N (30 kgf, 66 lbf) of force (reference)		9 to 11 clicks	
	Drum I.D		210.0-210.1 mm (8.268-8.272 in.)	211.0 mm (8.307 in.)
	Shoe lining thickness		3.9 mm (0.15 in.)	1.0 mm (0.04 in.)
Brake pedal	Pedal height (carpet removed)		178 mm (7 in.)	
	Free play		1-5 mm (1/16-3/16 in.)	
Master cylinder	Piston-to pushrod clearance		0 mm (0 in.)	
Brake disc	Thickness	Front	27.9-28.1 mm (1.10-1.11 in.)	26.0 mm (1.02 in.)
		Rear	10.9-11.1 mm (0.43-0.44 in.)	9.0 mm (0.35 in.)
	Runout		-	0.04 mm (0.0016 in.)
	Parallelism		-	0.015 mm (0.0006 in.)
Brake pad	Thickness	Front	10.6-11.2 mm (0.42-0.44 in.)	1.6 mm (0.06 in.)
		Rear	9.6-10.2 mm (0.38-0.40 in.)	1.6 mm (0.06 in.)

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

AIR CONDITIONING**AIR CONDITIONING SPECIFICATIONS**

Item	Measurement	Qualification	Standard or New
Refrigerant	Type		HFC-134a(R-134a)
	Capacity of system	Dual	600-650 g (20.3-22.0 oz)
Refrigerant oil	Type		DENSO ND-OIL 8 (P/N 38897--PR7--A01AH or 38899--PR7--A01)
	Capacity of components	Condenser	35 mL(1 1/6 fl.oz)
		Evaporator (front)	40 mL (1 1/3 fl.oz)
		Evaporator (rear)	30mL(1fl.oz)
		Each line and hose	10 mL (1/3 fl.oz)
		Compressor	125-137 mL (4 2/9-4 5/8 fl.oz)
Compressor (DENSO)	Field coil resistance	At 68°F (20°C)	3.9-4.3 ohms
	Pulley-to-pressure plate clearance		0.35-0.60 mm (0.014-0.024 in.)

DESIGN SPECIFICATIONS**DESIGN SPECIFICATIONS**

Item	Measurement	Qualification	Specification
DIMENSIONS	Overall length		4,844 mm (190.7 in.)
	Overall width		1,995 mm (78.5 in.)
	Overall height		1,733 mm (68.2 in.)
	Wheelbase		2,750 mm (108.3 in.)
	Track	Front	1,720 mm (67.7 in.)
		Rear	1,715 mm (67.5 in.)
	Ground clearance		207 mm (8.15 in.)
	Seating capacity		Seven (7)
WEIGHT (USA models)	Gross Vehicle Weight Rating (GVWR)		5,952 lbs
WEIGHT (Canada models)	Gross Vehicle Weight Rating (GVWR)		2,700 kg
ENGINE	Type		Water-cooled, 4-stroke SOHC VTEC V6 gasoline engine
	Cylinder arrangement		60° V6-cylinder, transverse
	Bore and stroke		90.0 x 96.0 mm (3.54 x 3.78 in.)

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

	Displacement		3,664 cm ³ (ml) (224 cu in.)
	Compression ratio		11.0
	Valve train		Belt driven, SOHC VTEC 4 valves per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Oil pump displacement	At 6,000 rpm	58.4L(61.7 US qt)/minute
	Water pump displacement	At 6,000 rpm	172L(182 US qt)/minute
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
STARTER	Type		Gear reduction
	Normal output		1.8 kW
	Nominal voltage		12V
	Hour rating		30 seconds
	Direction of rotation		Counterclockwise as viewed from gear end
AUTOMATIC TRANSMISSION	Type	BYFA	Electronically-controlled automatic, five-speed forward, one reverse
	Primary reduction		Direct 1:1
	Gear ratio	1st	2.697
		2nd	1.606
		3rd	1.071
		4th	0.766
		5th	0.538
		Reverse	1.888
	Final reduction	Type	Single helical gear
		Gear ratio	4.533
STEERING	Type		Hydraulic power-assisted rack and pinion
	Gear ratio		47.4
	Overall ratio		17.0
	Turns, lock-to-lock		3.29
	Steering wheel diameter		380 mm (15.0 in.)
SUSPENSION	Type	Front	Independent strut with stabilizer, coil spring
		Rear	Independent multi-link with trailing arm, stabilizer, coil spring

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

	Shock absorber (Without active damper system)	Front	Telescopic, hydraulic, nitrogen gas-filled
		Rear	Telescopic, hydraulic, nitrogen gas-filled
	Shock absorber (With active damper system)	Front	Magnet rheological variable active damper
		Rear	Magnet rheological variable active damper
TIRES	Size of front and rear tires		P255/55R18 104H
	Size of spare tire		T165/80D17 104M
WHEEL ALIGNMENT	Camber	Front	--0°30'
		Rear	--0°30'
	Caster	Front	4°12'
	Total Toe-in	Front	0 mm (0 in.)
		Rear	2 mm (0.08 in.)
	Front wheel turning angle	Inward	38°12'
		Outward (reference)	31°44'
	SAI at camber (kingpin axis)		12°48'
BRAKES	Type of service brake	Front	Power-assisted self-adjusting ventilated disc
		Rear	Power-assisted self-adjusting solid disc
	Type of parking brake		Foot type mechanical actuating, rear wheels
	Pad friction surface area (swept area)	Front	63.5 cm ² (9.84 sq in.) x2
		Rear	25.3 cm ² (3.92 sq in.) x2
	Parking brake shoe friction surface area		60.2 cm ² (9.33 sq in.) x2
AIR CONDITIONING	Cooling capacity	Front	3,506 kcal/h (13,910 BTU/h)
		Rear	1,728 kcal/h (6,860 BTU/h)
	Compressor	Type/Manufacturer	Swash plate/DENSO
		Number of cylinders	10
		Capacity	177 mL/rev. (10.8 cu in./rev.)
		Maximum speed	8,400 rpm
		Lubricant capacity	125 mL (4 2/9 fl.oz)
		Lubricant type	ND-OIL 8 (DENSO)
	Condenser	Type	Corrugated fin

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

	Evaporator	Type	Corrugated fin
	Blower	Type	Stabilized swirling flow
		Motor input (Front)	245W/12V
		Motor input (Rear)	115W/12V
		Speed control (Front)	Infinite variable
		Speed control (Rear)	Infinite variable
		Maximum capacity (Front)	525 m ³ /h (18,510 cu ft/h)
		Maximum capacity (Rear)	275 m ³ /h (9,695 cu ft/h)
	Temperature control		Air-mix type
	Compressor clutch	Type	Dry, single plate, Poly-V belt drive
		Electrical power consumption at 68°F (20° C)	35 W maximum at 12 V
	Refrigerant	Type	HFC-134a (R-134a>
		Quantity (Dual)	600-650 g (20.3-22.0 fl.oz)
ELECTRICAL RATINGS	Battery		12 V-76 Ah/20 HR (12 V-65 Ah/5 HR)
	Fuses	Main under-hood fuse box	120 A, 60 A, 50 A, 40 A, 30 A, 20 A, 15 A, 7.5 A
		Under-hood fuse/relay box	40 A, 30 A, 20 A, 15 A, 10 A 7.5 A
		Under-dash fuse/relay box	30 A, 20 A, 15 A, 10 A, 7.5 A
		Auxiliary under-dash fuse holder 1	7.5 A
		Auxiliary under-dash fuse holder 2	7.5 A
		Rear fuse/relay box	40 A, 30 A, 20 A, 15 A, 10 A, 7.5 A
	Light bulbs	Headlight high beam	12V-60W
		Headlight low beam	12V-35W(HID)
		Daytime running lights	12V-60W
		Front turn signal lights	12V-21 W
		Front side turn signal lights	LED
		Front parking lights	12 V-3 CP
		Front side marker lights	12V-3 CP
		Fog lights	12V-55W
		Rear turn signal lights	12V-21W

2008 Acura MDX

2007-09 GENERAL INFORMATION Specifications - MDX

		Brake/taillights	LED/LED
		Rear side marker lights	12V-3 CP
		High mount brake light	LED
		Back-up lights	12V-18W
		License plate lights	12V-3 CP
		Ceiling light	12V-8W
		Cargo area lights	12V-5W
		Front map light	12V-5W
		Rear map light	12V-5W
		Ambient light	LED
		Vanity mirror lights	12V-2W
		Glove box light	12V-3.4W
		Door courtesy lights	12V-3.4W
		Foot well lights	12V-3.4W
		Gauge lights	LED
		Indicator lights	14V-1.4W, 10V-0.6W
	Washer reservoir	Capacity (USA models)	4.0 L (4.2 US qt)
		Capacity (Canada models)	5.8 L (6.1 US qt)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX**TROUBLESHOOTING CHART**

Symptom	Diagnostic procedure	Also check for
Engine does not start (does not crank)	1. Check for loose battery terminals or connections. 2. Test the battery for a low charge (see <u>BATTERY TEST</u>). 3. Check the starter (see <u>STARTER SYSTEM CIRCUIT TROUBLESHOOTING</u>). 4. Check starter cut relay 1 and starter cut relay 2 (see <u>POWER RELAY TEST</u>). 5. Check the transmission range switch (see <u>TRANSMISSION RANGE SWITCH TEST</u>). 6. Check the ignition switch or wire (see <u>TEST</u>).	Poor ground at G101
Engine cranks, but does not start	1. Check for PGM-FI DTCs. 2. Check the fuel pressure (see <u>FUEL PRESSURE TEST</u>). 3. Check for a plugged or damaged fuel line (see <u>FUEL LINE INSPECTION</u>). 4. Check for a plugged fuel filter (see <u>FUEL PRESSURE REGULATOR REPLACEMENT</u>). 5. Check the throttle body (see <u>THROTTLE BODY TEST</u>). 6. Check for low engine compression (see <u>ENGINE COMPRESSION INSPECTION</u>). 7. Check for a damaged or broken timing belt.	
Engine is hard to start	1. Check for PGM-FI DTCs. 2. Check the fuel pressure (see <u>FUEL PRESSURE TEST</u>). 3. Check for a plugged or damaged fuel line (see <u>FUEL LINE INSPECTION</u>). 4. Check for a plugged fuel filter (see <u>FUEL PRESSURE REGULATOR REPLACEMENT</u>).	
Engine cranks slowly	1. Check for loose battery terminals or connections. 2. Test the battery for a low charge (see <u>BATTERY TEST</u>). 3. Check the starter for binding (see <u>STARTER</u>)	

	<u>OVERHAUL</u>).	
	4. Check for excessive drag in the engine.	
Multi-information display warning CHECK STARTING SYSTEM	Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>).	

CIRCUIT DIAGRAM

2008 Acura MDX

STARTER SYSTEM CIRCUIT TROUBLESHOOTING

Alternator, Regulator, Battery & Starter tester OTC3131 Available through the Acura Tool and Equipment

Program 888-424-6857

NOTE:

- Air temperature must be between 59 and 100°F (15 and 38°C) during this procedure.
- After the inspection, you must reset the powertrain control module (PCM). Otherwise, the PCM will continue to stop the fuel injectors from functioning.
- The battery must be in good condition and fully charged.

1. Connect the alternator, regulator, battery & starter tester (OTC3131) to the battery as shown.
 - Ammeter, 0-400 A
 - Voltmeter, 0-20 V (accurate within 0.1 volt)

NOTE: The probe is not used for battery testing.

Fig. 3: Measuring Voltage

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Do the BATTERY TEST.

Does the display indicate GOOD or LOW CHARGE?

YES - The battery is OK. Go to step 3.

NO -If the tester indicates BAD BATTERY, replace the battery, then retest. If the tester indicates CHARGE & RETEST, charge the battery, then retest.

3. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).

4. Turn the ignition switch to ON (II).
5. Make sure the HDS communicates with the vehicle and the PCM. If it doesn't communicate troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
6. Select PGM-FI, INSPECTION, then ALL INJECTORS OFF on the HDS.
7. Set the parking brake, then with the shift lever in the N or P position, turn the ignition switch to START (III).

Does the starter crank the engine normally?

YES - The starting system is OK. Go to step 15.

NO - Go to step 8.

8. Turn the ignition switch to LOCK (0).
9. Check the electrical connections at the battery, the negative battery cable to the body, the engine ground cables, and the starter for looseness and corrosion. Then try cranking the engine again.

Does the starter crank the engine normally?

YES - Repairing the loose connection corrected the problem. The starting system is OK. Go to step 15.

NO - Based on the following symptoms, take the appropriate action:

- If the starter will not crank the engine at all, go to step 10.
 - If the starter cranks the engine erratically or too slowly, go to step 12.
 - If the starter does not disengage from the torque converter ring gear when you release the key, replace the starter, or remove and disassemble it, and check for the following:
 - Starter solenoid and switch malfunction
 - Dirty drive gear or damaged overrunning clutch
10. Make sure the shift lever is in the N or P position, then disconnect the connector from the starter solenoid S terminal. Connect a jumper from the battery positive terminal to the solenoid S terminal.

Fig. 4: Identifying Starter Solenoid Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the starter crank the engine?

YES - Go to step 11.

NO - Remove the starter, and repair or replace it as necessary.

11. Check the following items in the order listed until you find the open circuit:

NOTE: **After the open circuit or high resistance in the circuit is found and repaired, go to step 15.**

- The WHT wire and connectors between the starter cut relay 1 and main under-hood fuse box.
- The BRN wire and connectors between the starter cut relay 2 and the starter cut relay 1.
- The WHT wire, BLK/WHT wire and connectors between the starter cut relay 2 and the starter.
- The ignition switch.(See **TEST**).
- The transmission range switch and connector(See **TRANSMISSION RANGE SWITCH TEST**).
- The starter cut relay 1 and the starter cut relay 2. (see **POWER RELAY TEST**).

Are these items OK?

YES - Go to step 12.

NO - Repair or replace it, then go to step 12.

12. Connect alternator, regulator, battery & starter tester (OTC3131) to the battery.

Fig. 5: Measuring Voltage

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Do the STARTING TEST.

Does the display indicate cranking voltage greater than or equal to 8.0 V and is the current draw less than or equal to 375 A?

YES - Go to step 14.

NO - Replace the starter, or remove and disassemble it, and check for these problems

- Drag in the starter armature
 - Short in the armature winding
 - Excessive drag in the engine
 - Open circuit in starter armature commutator segments
 - Excessively worn starter brushes
 - Open circuit in the starter brushes
 - Dirty or damaged helical splines or drive gear
 - Faulty over running clutch
14. Remove the starter, and inspect its drive gear and the torque converter ring gear for damage. Replace any damaged parts.
15. Select PCM reset (see **PCM RESET**) to cancel ALL INJECTORS OFF on the HDS.

STARTER SOLENOID TEST

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** .
2. Remove the battery and battery base (see step 11 on **ENGINE REMOVAL**).
3. Disconnect the positive starter cable (A), S terminal connector (B), and motor cable (C).

Fig. 6: Identifying Positive Starter Cable And Terminal Connector And Motor Cable With torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the hold-in coil for continuity between the S terminal and the armature housing (ground) (D). There should be continuity.
 - If there is continuity, go to step 6.
 - If there is no continuity, replace the solenoid.
5. Check the pull-in coil for continuity between the S terminal and the M terminal. There should be continuity.
 - If there is continuity, the solenoid is OK.
 - If there is no continuity, replace the solenoid.
6. Reconnect the starter cable, S terminal connector, and motor cable.
7. Install the battery and battery base (See step 62 on **ENGINE INSTALLATION** .
8. Do the battery terminal reconnection procedure (See **RECONNECTION** .

STARTER PERFORMANCE TEST

1. Disconnect the wire from the M terminal.
2. Make a connection for this test using the thickest (gauge) wire possible (preferably the same gauge as used on the vehicle).

NOTE: To avoid damaging the starter, never leave the battery connected for more than 10 seconds.

Fig. 7: Applying Battery Voltage To Starter Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the battery as shown. Make sure you disconnect the starter motor wire from the solenoid. If the starter pinion moves out, it is working properly.
4. Disconnect the battery from the M terminal. If the pinion does not retract, the hold-in coil of the solenoid is working properly.

Fig. 8: Disconnecting Battery From M Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the battery from the starter body. If the pinion retracts immediately, it is working properly.

Fig. 9: Disconnecting Battery From Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Clamp the starter firmly in a vise.
7. Reconnect the wire to the M terminal.
8. Connect the starter to the battery as shown in the diagram, and confirm that the motor starts and keeps rotating.

Fig. 10: Identifying Starter To Battery

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the electric current meets the specification when the battery voltage is at 11.5 V, the starter is working properly.

Specification

Electric Current: 90 A or less

STARTER REMOVAL AND INSTALLATION

REMOVAL

1. Do the battery terminal disconnection procedure (See DISCONNECTION).
2. Remove the air cleaner assembly (See AIR CLEANER ELEMENT INSPECTION/REPLACEMENT).
3. Remove the battery and battery base (See step 11 on ENGINE REMOVAL .
4. Remove the harness clamp (A).

Fig. 11: Identifying Starter Remove \ Install Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the positive starter cable (B) from the B terminal, then disconnect the connector (C) from the S terminal.
6. Remove the two bolts holding the starter.

INSTALLATION

1. Install the starter (A) using a new gasket (B), then install the harness clamp (C), and positive starter cable (D) and S terminal connector (E). Make sure the crimped side of the B terminal is facing out, away from the starter.

Fig. 12: Identifying Starter Remove \ Install Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the battery base and battery (See step 62 on ENGINE INSTALLATION .
3. Install the air cleaner assembly (see AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT).
4. Do the battery terminal reconnection procedure (See RECONNECTION).
5. Start the engine to make sure the starter works properly.

STARTER OVERHAUL

DISASSEMBLY/REASSEMBLY

Fig. 13: Exploded View Of Starter Overhaul Components
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRUSH HOLDER REMOVAL

1. Remove the starter (see **STARTER REMOVAL AND INSTALLATION**).
2. Disconnect the wire from the M terminal, and remove the end cover.
3. Place a plastic pipe with an outside diameter of 29.4 mm (1.16 in.) on the armature.

Fig. 14: Identifying Plastic Pipe

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Move the brush holder (A) up to the pipe (B) while holding the pipe so the brushes do not pop out from the holder.

Fig. 15: Identifying Brush Holder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Armature Inspection and Test

5. Disassemble the starter as shown at the beginning of this procedure.
6. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.

Fig. 16: Identifying Armature

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the commutator (A) surface. If the surface is dirty or burnt, resurface it with an emery cloth or a lathe to the specifications in step 8, or recondition with #500 or #600 sandpaper (B).

Fig. 17: Identifying Commutator Surface

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check the commutator diameter. If the diameter is below the service limit, replace the armature.

Commutator Diameter

Standard (New): 28.90-29.00 mm (1.138-1.142 in.)

Service Limit: 28.00 mm (1.102 in.)

Fig. 18: Identifying Commutator Diameter
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Measure the commutator (A) runout.
 - If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
 - If the commutator runout is not within the service limit, replace the armature.

Commutator Runout

Standard (New): 0.02 mm (0.0008 in.) max.

Service Limit: 0.05 mm (0.0002 in.)

Fig. 19: Measuring Commutator Runout
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check the mica depth (A). If the mica is too high (B), undercut the mica with a hacksaw blade to the proper depth. Cut away all the mica (C) between the commutator segments. The undercut should not be too shallow, too narrow, or V-shaped (D).

Commutator Mica Depth

Standard (New): 0.50-0.90 mm (0.020-0.035 in.)

Service Limit: 0.20 mm (0.008 in.)

Fig. 20: Identifying Commutator Segments

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between the segments of the commutator. If there is an open circuit between any segments, replace the armature.

Fig. 21: Identifying Continuity Between Segments Of Commutator

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attracted to the core or vibrates while the core is turned, the armature is shorted. Replace the armature.

Fig. 22: Placing Armature On Armature Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Use an ohmmeter to check for continuity between the commutator (A) and the armature coil core (B), and between the commutator and the armature shaft (C). If there is continuity, replace the armature.

Fig. 23: Checking Continuity Between Commutator And Armature Coil Core
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Starter Brush Inspection

14. Measure the brush length. If it is shorter than the service limit, replace the brush holder assembly.

Brush Length

Standard (New): 15.0-16.0 mm (0.59-0.63 in.)

Service Limit: 9.0 mm (0.35 in.)

Fig. 24: Measuring Brush Length

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Starter Brush Holder Test

15. Check for continuity between the (+) brush (A) and (-) brush (B). If there is continuity, replace the brush holder assembly.

Fig. 25: Identifying Continuity Between (+) Brush And (-) Brush

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Brush Spring Inspection

16. Insert the brush (A) into the brush holder, and bring the brush into contact with the commutator, then attach a spring scale (B) to the spring (C). Measure the spring tension at the moment the spring lifts off the brush. If it is not within the standard, replace the brush holder assembly.

Spring Tension

Standard (New): 22.3-27.3 N (2.27-2.78 kgf, 5.00-6.13 lbf)

Fig. 26: Measuring Spring Tension

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Planetary Gear Inspection

17. Check the planetary gears (A) and internal gear (B). Replace them if they are worn or damaged.

Fig. 27: Identifying Planetary Gears And Internal Gear

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Overrunning Clutch Inspection

18. Slide the overrunning clutch (A) along the shaft. Replace it, if it does not slide smoothly.

Fig. 28: Identifying Drive Gear

Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Hold the drive gear (B), and turn the overrunning clutch in the direction shown to make sure it turns freely. Also make sure the overrunning clutch locks in the opposite direction. If it does not lock, replace the overrunning clutch assembly.
20. If the starter drive gear is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately.

Check the condition of the torque converter ring gear. Replace it if the starter drive gear teeth are damaged.

Starter Reassembly

21. When you replace the brush holder or the armature housing, you need to seat the new brushes. Slip a strip of #500 or #600 sandpaper, with the grit side up, between the commutator and each brush, and smoothly turn the armature. The contact surface of the brushes will be sanded to the same contour as the commutator.
22. Pry back each brush spring with a screwdriver, then position the brush on the brush holder about halfway out of its holder. Release the spring to hold it in place.

Fig. 29: Prying Back Each Brush Spring With Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Push each brush down until it seats against the commutator, then release the spring against the end of the brush.

Fig. 30: Pushing Brush
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Install the armature housing (A) and armature (B) by aligning the slotted point (C) to the projection (D).

Fig. 31: Identifying Slotted Point To Projection
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the armature into the housing.
26. Place the brush holder assembly on the armature, then move the brush holder (A) down to the armature.

Fig. 32: Identifying Brush Holder Assembly On Armature
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Install the end cover to retain the brush holder.

Fig. 33: Identifying Cover To Retain Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2007-09 ACCESSORIES AND EQUIPMENT

Tailgate - MDX

TAILGATE ADJUSTMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. With power tailgate: Do the battery terminal disconnection procedure (See DISCONNECTION .

NOTE: Open the tailgate by using the emergency lever while adjusting the tailgate:

- Without power tailgate (see WITHOUT POWER TAILGATE)
 - With power tailgate (see WITH POWER TAILGATE)
2. Remove the Support strut from each side (see TAILGATE SUPPORT STRUT REPLACEMENT).
 3. Remove the striker cap (A) from the rear trim panel (B).

Fig. 1: Identifying Striker Cap Of Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slightly loosen each bolt (A).

Fig. 2: Identifying Tailgate Bolt With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Adjust the tailgate (B) alignment in the following sequence:
 - Adjust the tailgate right and left, using the elongated holes in the tailgate hinges (C).
 - Turn the tailgate edge cushions (D), in or out as necessary, to make the tailgate fit flush with the body at the side edges.
 - Adjust the fit between the tailgate and tailgate opening by moving the striker (E), and adjust the striker right or left until it is centered in the tailgate latch (F).
6. Tighten each bolt securely.
7. Check that the tailgate opens properly and locks securely.
8. Reinstall the support struts securely.
9. Apply touch-up paint to the hinge mounting bolts and around the hinges, and let the paint dry.
10. Apply multipurpose grease to the pivot portion of the tailgate hinges (A) as indicated by the arrows.

Fig. 3: Identifying Tailgate Hinges

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Reinstall all of the removed parts.
12. With power tailgate: Do the battery terminal reconnection procedure (See **RECONNECTION**).

NOTE:

- Check for any DTCs that may have been set during repairs, and clear them.

TAILGATE SUPPORT STRUT REPLACEMENT

NOTE:

Use eye protection when prying the support strut clips.

1. With the help of an assistant, use a flat-tip screwdriver (A) to pry the support strut clips (B) from each end of the support strut (C) at the tailgate and body, then release the support strut from the pivot bolt (D) and from the pivot bracket (E). Do not remove the clips from the support strut.

Fig. 4: Identifying Tailgate Support Strut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bolts, then remove the pivot bracket (A).

Fig. 5: Identifying Pivot Bracket And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the pivot bracket.
4. Set the clips (A) on the original position, then reattach the support strut (B) on the pivot bolt (C) and pivot bracket (D) by pushing the support strut onto the pivot.

Fig. 6: Identifying Support Strut Onto Pivot

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TAILGATE WEATHERSTRIP REPLACEMENT

1. With power tailgate: Remove the left tailgate side trim (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. With power tailgate: Remove the pivot bracket mounting bolts, then push the power tailgate rod (A) in the quarter pillar trim (B).

Fastener Locations

► : Bolt, 2

Fig. 7: Identifying Power Tailgate Rod And Quarter Pillar Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the tailgate weatherstrip (A) by pulling it out.

Fig. 8: Identifying Tailgate Weatherstrip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Locate the painted alignment mark (A) on the tailgate weatherstrip (B). Align the painted mark with the alignment notch in the center of the tailgate opening, and install the tailgate weatherstrip all the way around. Slip the weatherstrip in under the lips (C) of both rear gutter covers (D). Make sure there are no wrinkles in the weatherstrip.

Fig. 9: Identifying Alignment Mark On Tailgate Weatherstrip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With power tailgate: Fasten the pivot bracket (A) on the tailgate.

Fastener Locations

► : Bolt, 2

Fig. 10: Identifying Pivot Bracket On Tailgate With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With power tailgate: Reinstall the left tailgate side trim (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
7. Check for water leaks.

2007-09 SUSPENSION

TPMS (Tire Pressure Monitoring System) - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying TPMS Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

SYSTEM INDICATOR ('07 MODEL)

The system has seven indicators.

- The low tire pressure indicator (A)

- The message indicator (B)
- The TPMS indicator (C)
- The right-front (RF) tire indicator (D)
- The left-front (LF) tire indicator (E)
- The right-rear (RR) tire indicator (F)
- The left-rear (LR) tire indicator (G)

Fig. 2: Identifying Low Tire Pressure Indicator, Message Indicator, And TPMS Indicator
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

The TPMS (tire pressure monitoring system) has seven indicators: four tire indicators (on the multi-information display), a low tire pressure indicator (LED indicator), a message indicator (LED indicator), and a TPMS indicator (on the multi-information display). When the TPMS control unit detects low pressure in a tire, or a problem in the system, it turns on the appropriate indicator(s), as well as the message indicator.

The low tire pressure indicator ('07 Model)

- If the system detects low tire pressure in any of the four tires, the low tire pressure indicator and the appropriate tire indicator(s) come on, as well as the message indicator.
- If the control unit detects a problem in the system during an indication of low tire pressure, it will turn off the tire indicator(s), store the DTC(s), and turn on the TPMS indicator.

The TPMS indicator

- If a problem in the system is detected, the TPMS indicator come on, as well as the message indicator.
- If low tire pressure and a problem in the system are detected, the TPMS indicator comes on, as well as the

message indicator.

If the system is OK, the low tire pressure indicator should come on when you turn the ignition switch to ON (II), and then go off 2 seconds later. If it doesn't, there is a problem with the system.

If a problem is detected in the system, most DTCs will cause the TPMS indicator with the message indicator to come on and stay on until the system returns to normal. If DTC 45, 61, 63, 65, 67, 81, 83, or 85 is set, the TPMS indicator will go off only when the ignition switch is turned to LOCK (0).

SYSTEM INDICATOR ('08-09 MODELS)

- The low tire pressure indicator (A)
- The message indicator (B)
- The TPMS indicator (C)
- The right-front (RF) tire indicator (D)
- The left-front (LF) tire indicator (E)
- The right-rear (RR) tire indicator (F)
- The left-rear (LR) tire indicator (G)

Fig. 3: Identifying Low Tire Pressure Indicator, Message Indicator, And TPMS Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

The TPMS (tire pressure monitoring system) has seven indicators: four tire indicators (on the multi-information display), a low tire pressure indicator (LED indicator), a message indicator (LED indicator), and a TPMS indicator (on the multi-information display). When the TPMS control unit detects low pressure in a tire, or a problem in the system, it turns on the appropriate indicator(s), as well as the message indicator.

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

The low tire pressure indicator

- If the system detects low tire pressure in any of the four tires, the low tire pressure indicator and the appropriate tire indicator(s) come on, as well as the message indicator.
- If the control unit detects a problem in the system during an indication of low tire pressure, it will turn off the tire indicator(s), store the DTC(s), and turn on the TPMS indicator.

The TPMS indicator

- If a problem in the system is detected, the TPMS indicator come on, as well as the message indicator, and the low tire pressure indicator comes on after blinking for about 75 seconds.
- If low tire pressure and a problem in the system are detected, the TPMS indicator comes on, as well as the message indicator.

If the system is OK, the low tire pressure indicator should come on when you turn the ignition switch to ON (II), and then go off 2 seconds later. If it doesn't, there is a problem with the system.

If a problem is detected in the system, most DTCs will cause the TPMS indicator and the low tire pressure indicator (starts blinking) to come on and stay on until the system returns to normal. If DTC 45, 61, 63, 65, 67, 81, 83, or 85 is set, the TPMS indicator with the message indicator and the low tire pressure indicator will go off only when the ignition switch is turned to LOCK (0).

DTC 11, 13, 15, 17

If the system detects low tire pressure in any of the four tires, the low tire pressure indicator and the appropriate tire indicator(s) with the message indicator come on, and the control unit sets one or more of these codes: DTC 11, 13, 15, 17. When the tire pressure returns to normal, and TPMS control unit receives the normal pressure signal from, the tire pressure sensor, control unit turns off the indicators.

Pressure changing by Temperature

Tire pressures will increase slightly as the temperature in the tires rises during driving.

Pressures will also increase or decrease slightly with changes in outside air temperature. A temperature change of about 18 °F (10 °C) will change tire pressure by about 10 kPa (0.1 kgf/cm², 1.5 psi). If the temperature drops, tire pressure could decrease just enough to turn on the low tire pressure indicator and tire indicator(s), but later as tire temperature increases, the tire pressure could increase enough to turn them off. To resolve a complaint of such intermittent indications, confirm and clear the stored DTC(s) and check the tire pressures.

Then explain to the client how temperature changes can affect the system.

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

Fig. 4: Identifying Temperature Chart

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Problems That Are Not System Faults

- Tire Sealant

Fluid sealant used to repair a punctured tire can damage the tire pressure sensor mounted on each wheel. It can prevent the system from detecting the correct tire pressure, which sets a DTC 11, 13, 15, or 17 even though the system is normal.

- Cold Weather

When the weather is extremely cold - about -40°F (-40°C) or colder - the output of the lithium battery in each tire pressure sensor may drop far enough that the control unit sets a DTC for low battery voltage (31, 33, 35, or 37) even though the system is normal.

- Non-TPMS Wheels

Vehicles equipped with TPMS must use wheels made for the system. Every TPMS wheel has an exclusive mark; do not use any other type of wheel.

How a Diagnostic Trouble Code (DTC) is Set ('07 Model)

- When the system detects a problem, the TPMS control unit sets a code, but shifts to fail-safe mode, and will not alert the driver to low tire pressures.
- If the TPMS control unit loses power, or fails, the TPMS indicator will come on, but no DTC will be set.
- The memory can hold all the DTCs that could possibly be set. However, when the same DTC is detected more than once, the most recent one overwrites the previous one, so only the latest DTC of each type is stored.
- DTCs are indicated in ascending order, not in the order they occurred.
- Set DTCs are stored in the EEPROM (nonvolatile memory), they cannot be cleared by disconnecting the battery. To clear a DTC, connect the HDS (Honda Diagnostic System) to the data link connector (DLC), and follow the screen prompts.

How a Diagnostic Trouble Code (DTC) is Set ('08-09 Models)

- When the system detects a problem, the TPMS control unit sets a code, but shifts to fail-safe mode, and will not alert the driver to low tire pressures.
- If the TPMS control unit loses power, or fails, the TPMS indicator and the low tire pressure indicator (starts blinking) will come on, but no DTC will be set.
- The memory can hold all the DTCs that could possibly be set. However, when the same DTC is detected more than once, the most recent one overwrites the previous one, so only the latest DTC of each type is stored.
- DTCs are indicated in ascending order, not in the order they occurred.
- Set DTCs are stored in the EEPROM (nonvolatile memory), they cannot be cleared by disconnecting the battery. To clear a DTC, connect the HDS (Honda Diagnostic System) to the data link connector (DLC), and follow the screen prompts.

How to Troubleshoot DTCs ('07 Model)

DTC troubleshooting procedures assume the cause of the problem is still present and the TPMS indicator is still on. (NOTE: The TPMS indicator comes on for DTCs 11, 13, 15, and 17 only if the low tire pressure indication is false, caused by a problem in the system.) Do not use a troubleshooting procedure unless the system has set the DTC listed for it.

1. Ask the client to describe the conditions when the indicator came on, and try to reproduce the same conditions for troubleshooting. Find out if the client checked and/or adjusted tire pressures since the indicator came on.
2. If an indicator does not come on during the test-drive, check for loose terminals, poor contact due to damaged terminals, etc. before you start troubleshooting.
3. After troubleshooting, clear the DTCs, and test-drive the vehicle. Make sure no indicators come on.
4. Check for other unit DTCs which are connected via F-CAN. If there are DTCs that are related to F-CAN, the most likely cause was that the ignition switch was turned to ON (II) with the TPMS control unit connector disconnected. Clear the DTCs. Check for PGM-FI and TPMS codes, and troubleshoot those first.

How to Troubleshoot DTCs ('08 -'09 Models)

DTC troubleshooting procedures assume the cause of the problem is still present and the TPMS indicator and the low tire pressure indicator (starts blinking) are still on. (NOTE: The TPMS indicator comes on and the low tire pressure indicator starts blinking then turn on for DTCs 11, 13, 15, and 17 only if the low tire pressure indication is false, caused by a problem in the system.) Do not use a troubleshooting procedure unless the system has set the DTC listed for it.

1. Ask the client to describe the conditions when the indicators came on or blinked, and try to reproduce the same conditions for troubleshooting. Find out if the client checked and/or adjusted tire pressures since the indicator came on.
2. If an indicator does not come on during the test-drive, check for loose terminals, poor contact due to damaged terminals, etc. before you start troubleshooting.
3. After troubleshooting, clear the DTCs, and test-drive the vehicle. Make sure no indicators come on.
4. Check for other unit DTCs which are connected via F-CAN. If there are DTCs that are related to F-CAN, the most likely cause was that the ignition switch was turned to ON (II) with the TPMS control unit connector disconnected. Clear the DTCs. Check for PGM-FI and TPMS codes, and troubleshoot those first.

How to Retrieve DTCs

1. With the ignition switch LOCK (0), connect the HDS (Honda Diagnostic System) to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 5: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the TPMS control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the **DTC TROUBLESHOOTING**.

NOTE: See the HDS Help menu for specific instructions.

5. Turn the ignition switch to LOCK (0).

How to Clear DTCs

1. With the ignition switch LOCK (0), connect the HDS to the data link connector (DLC) (A) located under the dash on the driver's side of the dashboard.

Fig. 6: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the TPMS control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Clear the DTC(s) by following the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

5. Turn the ignition switch to LOCK (0).

MEMORIZING THE TIRE PRESSURE SENSOR ID

MEMORIZING A TIRE PRESSURE SENSOR ID

When a tire pressure sensor is replaced, the sensor ID must be memorized by the TPMS control unit.

NOTE: To ensure the control unit memorizes the correct ID, the vehicle with the new sensor must be at least 10 ft (3 m) from any other TPMS pressure sensor not installed on that vehicle.

After rotating the tires or replacing a tire pressure sensor, drive the vehicle for at least 40 seconds at a speed of 15 mph (24 km/h) or more, and all the sensor IDs will be memorized automatically.

NOTE:

- When replacing the TPMS control unit, use the HDS to memorize IDs.
- After the IDs are memorized, reduce the pressure in all four tires to less than the appropriate specification, and check to see that the four tire indicators come on.

Memorize the ID with the HDS

The HDS can memorize the ID of a new tire pressure sensor or a previously memorized ID.

1. With the ignition switch LOCK (0), connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 7: Identifying Data Link Connector (DLC)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the TPMS control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Memorize the ID of the tire pressure sensor by following the screen prompts on the HDS.

NOTE:

- See the HDS Help menu for specific instructions.
- When replacing the TPMS control unit, use the HDS to memorize IDs.
- After the IDs are memorized, reduce the pressure in all four tires to less than the appropriate specification, and check to see that the four tire indicators come on.

5. Turn the ignition switch to LOCK (0).

System Structure

Whenever the engine is running, the TPMS control unit continuously monitors all four tires and the system. If it detects low pressure in a tire, it alerts the driver by turning on the low tire pressure indicator and the appropriate tire indicator. If it detects a problem in the system, it turns on the TPMS indicator.

Initiators

Mounted on each wheel well, each initiator sends a start/stop signal to the tire pressure sensor in the tire below it.

Control unit

Mounted on the brake pedal bracket, the control unit sends signals to the initiators and receives signals from them to verify pressure sensor IDs every time the engine starts. It also receives signals from the transmitters in the tire pressure sensors, and it continuously monitors and controls the system.

Indicators

All indicators are in the gauge control module: The low tire pressure indicator (LED indicator), four tire

indicators (on the multi-information display) to show which tire is affected, and the TPMS indicator (on the multi-information display) that comes on only if there's a problem with the system. The message indicator (LED indicator) comes on when there is one or more indication in the multi-information display. When two or more tire pressures are low, the low tire pressure indicator comes on about 5 seconds before the appropriate tire indicator. Once low pressure is detected, the system scans all four pressure sensors to ensure that it turns on the correct tire indicator.

Fig. 10: Indicators And Gauge Control Module System Diagram
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Tire pressure sensor

Each sensor is an integrated unit made up of the tire valve stem, a pressure sensor, and a transmitter. The unit is attached to the inside of the wheel, around the valve stem. The sensor transmits the internal tire information to the control unit once every 60 seconds. When the TPMS control unit receives tire pressure of less than 175 kPa (1.8 kgf/cm², 25 psi), the control unit then turns on the low tire pressure indicator and the appropriate tire(s) indicator. When that tire's pressure is increased to more than 200 kPa (2.0 kgf/cm², 29 psi), the transmitter sends tire pressure to the control unit, and then the control unit turns the indicators off.

Wheels

The TPMS will not work unless TPMS type wheels are installed on the vehicle. There are two different type wheels used. The original equipment wheels have a "TPMS" stamp (A) on the back of the wheel and counterweights (B) cast into the opposite side of the spoke to balance the weight of the tire pressure sensor (C).

Fig. 11: Identifying "TPMS" Stamp, Counterweights And Tire Pressure Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

System Communication

- When the vehicle is running, a RF (radio frequency) band wave signal is continuously transmitted from each tire pressure sensor to the control unit.
- When the ignition switch is turned to ON (II), the initiators send a LF (low frequency) band wave signal to the tire pressure sensors, switching them from sleep mode to normal function mode. When the ignition switch is turned to LOCK (0), the sensors switch from normal function mode back to sleep mode to extend their battery life.
- Each tire pressure sensor has its own ID to prevent jamming by similar systems on other vehicles. After memorizing all the sensor IDs, the control unit receives only those specific signals.
- An ID can be memorized manually or automatically. Each initiator is hardwired to the control unit. Every time the ignition is turned to ON (II), the control unit asks each initiator for a sensor ID. The initiators then transmit the sensor IDs, and the control unit receives and memorizes them. The control unit then knows which ID belongs to each tire location. This recurring ID confirmation prevents any confusion in the system as a result of normal tire rotation.

NOTE: Be careful not to bend the brackets on the TPMS control unit and the front/rear initiators. Misalignment of the control unit and initiators could interfere with sending and receiving signals.

DTC TROUBLESHOOTING

DTC 11, 13, 15, 17: TIRE LOW AIR PRESSURE

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

NOTE: If low tire pressure is detected, the control unit will set one or more of these DTCs, and turn on the low tire pressure indicator and the appropriate tire indicator(s). If the low tire pressure and tire indicators come on due to true low tire pressure, and the client corrects it before bringing the vehicle in, the DTCs will have been stored, but all the indicators will be off.

1. Turn the ignition switch to LOCK (0).
2. Make sure the tires are inflated to the specified tire pressure listed on the doorjamb sticker.
3. Test-drive the vehicle.

Does the low tire pressure indicator go off?

YES - The system is OK at this time. Check for and repair the cause of air loss.

NO - Go to step 4.

4. Turn the ignition switch to ON (II).
5. Check the RF, LF, RR, or LR TIRE PRESSURE in the TPMS DATA RIST with the HDS, and compare with measured actual tire pressure.

NOTE: If the HDS screen shows **UNDEFINED** for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If **UNDEFINED** is still shown, repeat the procedure in the previous sentence until **NORMAL** is shown.

Is the indicated tire pressure on the HDS within 40 kPa (0.4 kgf/cm², 6 psi) of the actual tire pressure?

YES - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

NO - Check that the tire pressure sensor is properly mounted. Replace the appropriate tire pressure sensor (see **TIRE PRESSURE SENSOR REPLACEMENT**).

DTC 21, 22, 23, 24: TIRE PRESSURE SENSOR ABNORMALLY HIGH TEMPERATURE

1. Turn the ignition switch to ON (II).
2. Check the tire indicated by the DTCs you retrieved.

NOTE: An abnormal rise in the internal temperature of the tires can be caused by:

- Excessive braking
- Failure to release the parking brake (rear tires only)
- Leaving the vehicle running while parked
- Improper assembly of a wheel and tire

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

DTC REFERENCE

DTC	Tire location
21	Right-front
22	Left-front
23	Right-rear
24	Left-rear

3. Turn the ignition switch to LOCK (0).
4. Make sure the tires have cooled down.
5. Turn the ignition switch to ON (II).

Does the TPMS indicator go off within one minute?

YES - The system is OK at this time. Clear the DTC with the HDS.

NO - Go to step 6.

6. Check the RF, LF, RR, or LR TIRE PRESSURE SENSOR TEMPERATURE in the TPMS DATA LIST with the HDS.

NOTE: If the HDS screen shows **UNDEFINED** for sensor status, turn the ignition switch to **LOCK (0)**, rotate the tire 1/4 turn, then turn the ignition switch to **ON (II)**, and try again. If **UNDEFINED** is still shown, repeat the procedure in the previous sentence until **NORMAL** is shown.

Is 176°F (80°C) or more indicated?

YES - Replace the appropriate tire pressure sensor (see **TIRE PRESSURE SENSOR REPLACEMENT**).

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

DTC 31, 33, 35, 37: TIRE PRESSURE SENSOR LOW BATTERY VOLTAGE

NOTE: This problem occurs when the temperature around the sensor is -40°F (-40°C) or less. Note that the diagnosis must be made in a place where ambient temperature is -4°F (-20°C) or more.

1. Turn the ignition switch to ON (II).

Does the TPMS indicator go off within one minute?

YES - The system is OK at this time. Clear the DTC with the HDS.

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

NO - Go to step 2.

2. Check the RF, LF, RR, or LR TIRE PRESSURE SENSOR TRANSMITTER BATTERY in the TPMS DATA LIST with the HDS.

NOTE: If the HDS screen shows **UNDEFINED** for sensor status, turn the ignition switch to **LOCK (0)**, rotate the tire 1/4 turn, then turn the ignition switch to **ON (II)**, and try again. If **UNDEFINED** is still shown, repeat the procedure in the previous sentence until **NORMAL** is shown.

DTC REFERENCE

DTC	Tire location
31	Right-front
33	Left-front
35	Right-rear
37	Left-rear

Is LOW indicated?

YES - Replace the appropriate tire pressure sensor (see **TIRE PRESSURE SENSOR REPLACEMENT**).

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

DTC 32, 34, 36, 38: TIRE PRESSURE SENSOR TRANSMISSION FAILURE

- NOTE:**
- Inspect for an aftermarket device interfering with the RF signal from the sensors when turning the ignition switch to **ON (II)**.
 - Vehicle must be driven for 3 minutes at 15 mph (24 km/h) or more for DTC 32, 34, 36, or 38 to set.

1. Turn the ignition switch to **ON (II)**.
2. Check the indicated location to make sure the wheel is a TPMS type with the tire pressure sensor.

DTC REFERENCE

DTC	Tire location
32	Right-front
34	Left-front
36	Right-rear
38	Left-rear

Is a TPMS type wheel with a tire pressure sensor mounted on the vehicle?

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

YES - Go to step 3.

NO - Install a TPMS type wheel, and memorize the sensor ID. Drive the vehicle above 15 mph (24 km/h) for 40 continuous seconds, or memorize the ID with the HDS. **MEMORIZE THE ID WITH THE HDS**

3. Test-drive the vehicle
4. Check the VEHICLE SPEED in the TPMS DATA LIST with the HDS.

Is the vehicle speed indicated?

YES - Go to step 8.

NO - Go to step 5.

5. Turn the ignition switch to LOCK (0).
6. Turn the ignition switch to ON (II).
7. Check for DTCs with the HDS.

Is DTC 85 indicated?

YES - Go to the **DTC 85 troubleshooting** (see).

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

8. Turn the ignition switch to LOCK (0).
9. Turn the ignition switch to ON (II).
10. Check TPMS DATA LIST for RF, LF, RR, or LR TIRE PRESSURE SENSOR TRANSMITTER STATUS changing to NORMAL with the HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If the status does not change to normal, repeat the procedure in the previous sentence until NORMAL is shown.

DTC REFERENCE

DTC	Tire location
32	Right-front
34	Left-front
36	Right-rear
38	Left-rear

Is NORMAL indicated within one full turn of the tire?

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

YES - The system is OK at this time. Clear the DTC with the HDS.

NO - Go to step 11.

11. Turn the ignition switch to LOCK (0).
12. Install a wheel with a known-good tire pressure sensor on the vehicle.
13. To memorize the sensor ID, drive the vehicle above 15 mph (24 km/h) for 40 continuous seconds, or memorize the ID with the HDS (see **MEMORIZE THE ID WITH THE HDS**).
14. Turn the ignition switch to LOCK (0).
15. Turn the ignition switch to ON (II).
16. Check TPMS DATA LIST for RF, LF, RR, and LR TIRE PRESSURE SENSOR TRANSMITTER STATUS changing to NORMAL with the HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

DTC REFERENCE

DTC	Tire location
32	Right-front
34	Left-front
36	Right-rear
38	Left-rear

Is NORMAL indicated within one full turn of the tire?

YES - Replace the tire pressure sensor on the client's wheel (see **TIRE PRESSURE SENSOR REPLACEMENT**).

NO - Go to step 17.

17. Turn the ignition switch to LOCK (0).
18. Replace the appropriate initiator with a known-good initiator. (see **INITIATOR REPLACEMENT**)
19. Turn the ignition switch to ON (II).
20. Check TPMS DATA LIST for RF, LF, RR, and LR TIRE PRESSURE SENSOR TRANSMITTER STATUS changing to NORMAL with the HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

Is there continuity?

YES - Repair short to power in the wire between the TPMS control unit and the appropriate initiator.

NO - Replace the TPMS control unit. **TPMS CONTROL UNIT REPLACEMENT**

DTC 41: ABNORMAL SIGNAL RECEPTION ERROR

NOTE: **Inspect for an aftermarket device interfering with the RF signal from the sensors when turning the ignition switch to ON (II).**

1. Turn the ignition switch to LOCK(O).
2. Check all four wheels to make sure they are the TPMS type with the tire pressure sensor.

Is each wheel a TPMS type with a tire pressure sensor mounted on the vehicle?

YES - Go to step 5.

NO - Go to step 3.

3. Install known-good TPMS wheel(s).
4. To memorize the sensor ID(s), drive the vehicle above 15 mph (24 km/h) for 40 continuous seconds, or memorize the ID(s) with the HDS (see **MEMORIZE THE ID WITH THE HDS**).
5. Test-drive the vehicle.
6. Check the VEHICLE SPEED in the TPMS DATA LIST with the HDS.

Is the vehicle speed indicated?

YES - Go to step 10.

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0).
8. Turn the ignition switch to ON (II).
9. Check for DTCs with the HDS.

Is DTC 85 indicated?

YES - Go to the **DTC 85 troubleshooting** (see).

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

10. Turn the ignition switch to LOCK (0).
11. Turn the ignition switch to ON (II).
12. Check TPMS DATA LIST for LF, RF, LR, and RR TIRE PRESSURE SENSOR TRANSMITTER

STATUS changing to NORMAL with the HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

Is NORMAL indicated within one full turn of the tire?

YES - The system is OK at this time. Clear the DTC with the HDS.

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

DTC 45: INITIATOR CIRCUIT SHORT DETECTION

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 45 indicated?

YES - Go to step 5.

NO - The system is OK at this time.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the TPMS control unit 20P connector.
7. Check for continuity between body ground and TPMS control unit 20P connector terminal No. 20.

TPMS CONTROL UNIT 20P CONNECTOR

Fig. 21: Identifying Continuity Between Body Ground And TPMS Control Unit 20P Connector Terminal No. 20

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 8.

NO - Go to step 11.

8. Disconnect all four of the initiator 3P connectors.
9. Check for continuity between body ground and TPMS control unit 20P connector terminal No. 20.

TPMS CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 22: Identifying Continuity Between Body Ground And TPMS Control Unit 20P Connector Terminal No. 20

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the TPMS control unit and the initiators.

NO - Go to step 10.

10. On each individual initiator, check for continuity between body ground and initiator 3P connector terminal No. 1.

NOTE: Check the initiators when mounted on the vehicle.

INITIATOR 3P CONNECTOR

Terminal side of male terminals

Fig. 23: Identifying Continuity Between Body Ground And Initiator 3P Connector Terminal No. 1
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the appropriate initiator (see **INITIATOR REPLACEMENT**).

NO - Check for loose terminals and poor connections at the TPMS control unit, if necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

11. Check for continuity between TPMS control unit 20P connector terminals No. 15 and No. 20.

TPMS CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 24: Identifying Continuity Between TPMS Control Unit 20P Connector Terminals No. 15 And No. 20

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Go to step 15.

12. Disconnect all four of the initiator 3P connectors.
13. Check for continuity between TPMS control unit 20P connector terminals No. 15 and No. 20.

TPMS CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 25: Identifying Continuity Between TPMS Control Unit 20P Connector Terminals No. 15 And No. 20

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between TPMS control unit 20P connector terminals No. 15 (LF GND line) and No. 20 (LF PWR. line).

NO - Go to step 14.

14. On each individual initiator, check for continuity between initiator 3P connector terminals No. 1 and No. 3.

INITIATOR 3P CONNECTOR

Terminal side of male terminals

Fig. 26: Identifying Continuity Between Initiator 3P Connector Terminals No. 1 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the appropriate initiator (see **INITIATOR REPLACEMENT**).

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

15. Turn the ignition switch to ON (II).
16. Measure voltage between body ground and TPMS control unit 20P connector terminal No. 15.

TPMS CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 27: Identifying Voltage Between Body Ground And TPMS Control Unit 20P Connector Terminal No. 15

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair short to power in the wire between the TPMS control unit and the initiators.

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

DTC 51, 53, 55, 57: TIRE PRESSURE SENSOR REGISTRATION ERROR

NOTE: These DTCs will only set during initialization with the HDS.

1. Turn the ignition switch to LOCK (0).
2. Check the DTC indicated to the tire location to make sure the wheel is a TPMS type with the tire pressure sensor.

DTC REFERENCE

DTC	Tire location
51	Right-front
53	Left-front
55	Right-rear
57	Left-rear

Is a TPMS type wheel with a tire pressure sensor mounted on the vehicle?

YES - Go to step 6.

NO - Install a TPMS type wheel, and memorize the ID, drive the vehicle above 15 mph (24 km/h) for 40 continuous seconds, or memorize the ID with The HDS. (see **MEMORIZE THE ID WITH THE HDS**).

3. Turn the ignition switch to LOCK (0).
4. Turn the ignition switch to ON (II).
5. Check TPMS DATA LIST for RF, LF, RR, or LR TIRE PRESSURE SENSOR TRANSMITTER STATUS changing to NORMAL with the HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

DTC REFERENCE

DTC	Tire location
51	Right-front

55	Right-rear
57	Left-rear

Is NORMAL indicated within one full turn of the tire?

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

YES - The system is OK at this time. Clear the DTC with the HDS.

NO - Go to step 11.

6. Install a wheel with a known-good tire pressure sensor on the vehicle.
7. To memorize the sensor ID, drive the vehicle above 15 mph (24 km/h) for 40 continuous seconds, or memorize the ID with the HDS (see **MEMORIZE THE ID WITH THE HDS**).
8. Turn the ignition switch to LOCK (0).
9. Turn the ignition switch to ON (II).
10. Check TPMS DATA LIST for RF, LF, RR, or LR TIRE PRESSURE SENSOR TRANSMITTER STATUS changing to NORMAL with the HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

DTC REFERENCE

DTC	Tire location
51	Right-front
53	Left-front
55	Right-rear
57	Left-rear

Is NORMAL indicated within one full turn of the tire?

YES - Replace the tire pressure sensor on the client's wheel (see **TIRE PRESSURE SENSOR REPLACEMENT**).

NO - Go to step 11.

11. Turn the ignition switch to LOCK (0).
12. Replace the appropriate initiator with a knowngood initiator (see **INITIATOR REPLACEMENT**).
13. Turn the ignition switch to ON (II).
14. Check TPMS DATA LIST for RF,LF,RR and LR TIRE PRESSURE SENSOR TRANSMITTER STATUS changing to NORMAL with HDS.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

DTC 61, 63, 65, 67: INITIATOR CIRCUIT OPEN DETECTION

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II) again.
4. Check for DTCs with the HDS, and note the indicated DTC(s).

Is DTC 61, 63, 65, and/or 67 indicated?

YES - Go to step 5.

NO - The system is OK at this time.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the appropriate initiator 3P connector.

DTC REFERENCE

DTC	Initiator location
61	Right-front
63	Left-front
65	Right-rear
67	Left-rear

7. Disconnect the TPMS control unit 20P connector.
8. Check for continuity between TPMS control unit 20P connector terminal No. 20 and appropriate initiator 3P connector terminal No. 1.

CONTINUITY REFERENCE

67	Left-rear

Fig. 33: Identifying Continuity Between TPMS Control Unit Connector Terminal 20 And Initiator 3P Connector Terminal 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the TPMS control unit and the appropriate initiator.

- Check for continuity between TPMS control unit 20P connector terminal No. 15 and appropriate initiator 3P connector terminal No. 3.

CONTINUITY REFERENCE

67	Left-rear

Fig. 34: Identifying Continuity Between TPMS Control Unit 20P Connector Terminal No. 15 And Initiator 3P Connector Terminal 3

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the TPMS control unit and the appropriate initiator.

10. Check for continuity between the appropriate TPMS control unit 20P connector terminal and appropriate initiator 3P connector terminal No. 2 (see table).

CONTINUITY REFERENCE

DTC	TPMS control unit terminal	Initiator location
61	No. 6	Right-front
63	No. 5	Left-front
65	No. 17	Right-rear
67	No. 16	Left-rear

Fig. 35: Identifying Continuity Between TPMS Control Unit Connector Terminal And Initiator 3P Connector Terminal 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire between the TPMS control unit and the appropriate initiator.

11. Check for noted DTC(s) in step 4.

Were DTC 61, 63, 65, and 67 indicated at the same time?

YES - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

NO - Go to step 12.

12. Swap a known-good initiator with the initiator indicated by the DTC (see **INITIATOR REPLACEMENT**).

DTC REFERENCE

63	Left-front
65	Right-rear
67	Left-rear

13. Reconnect all connectors.
14. Turn the ignition switch to ON (II).
15. Clear the DTC with the HDS.
16. Turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II) again.
17. Check for DTCs with the HDS, and compare the indicated DTC with the noted DTC(s) in step 4.

DTC REFERENCE

DTC	Initiator location
61	Right-front
63	Left-front
65	Right-rear
67	Left-rear

Does the indicated DTC change between the initiators that were replaced in step 12?

YES - Replace the appropriate initiator (see **INITIATOR REPLACEMENT**).

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

DTC 81: TPMS CONTROL UNIT FAILURE

NOTE: **Low battery voltage can cause this DTC. Make sure the battery is fully charged and in good condition.**

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 81 indicated?

YES - Replace the TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).

NO - The system is OK at this time.

DTC 83: NO VSP SIGNAL

NOTE: Check the fuel and emission systems DTCs with the HDS, and troubleshoot the PCM and F-CAN communication errors first (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle.
4. Check for DTCs with the HDS.

Is DTC 83 indicated?

YES -Go to step 5.

NO -The system is OK at this time.

5. Check for DTCs with the HDS.

Is DTC 85 indicated?

YES -Go to **DTC 85 troubleshooting** (see).

NO -Go to step 6.

6. Test-drive the vehicle.
7. Check the VEHICLE SPEED in the TPMS DATA LIST with the HDS.

Is the vehicle speed indicated?

YES -Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

NO -Go to step 8.

8. Check the speedometer.

Does the speedometer register speed?

YES -Replace the TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).

NO -Substitute a known-good PCM (see **SUBSTITUTING THE PCM**), and retest. If no codes are shown, replace the original PCM.

DTC 85: F-CAN COMMUNICATION FAILURE

NOTE: Check the fuel and emission systems DTCs with the HDS, and troubleshoot the

PCM and F-CAN communication errors first (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II) again.
4. Wait about 5 seconds.
5. Check for DTCs with the HDS.

Is DTC 85 indicated?

YES - Go to step 6.

NO - The system is OK at this time.

6. Test-drive the vehicle.

Does the speedometer work?

YES - Go to step 10.

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0).
8. Disconnect the TPMS control unit 20P connector.
9. Test-drive the vehicle.

Does the speedometer work?

YES - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see TPMS CONTROL UNIT REPLACEMENT), and recheck.

NO - Turn the ignition switch to LOCK (0), and reconnect all connectors, then check and troubleshoot the fuel and emissions systems (see GENERAL TROUBLESHOOTING INFORMATION).

10. Turn the ignition switch to LOCK (0).
11. Short the SCS line with the HDS.
12. Disconnect PCM connector A (49P).
13. Disconnect the TPMS control unit 20P connector.
14. Check for continuity between the TPMS control unit 20P connector terminals and the PCM connector A (49P) terminals individually (see table).

CONTINUITY REFERENCE

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

Terminal name	TPMS control unit terminal	PCM A terminal
CANL	No. 11	No. 49
CANH	No. 1	No. 48

Fig. 36: Identifying Continuity Between TPMS Control Unit 20P Connector Terminals And PCM Connector A (49P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

NO - Repair open in the wire between the TPMS control unit and the PCM.

DTC 91, 93, 95, 97: TIRE PRESSURE SENSOR INTERNAL ERROR

1. Turn the ignition switch to ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II) again.
4. Wait about 1 minute.
5. Check for DTCs with the HDS.

NOTE: The tire pressure sensor of the appropriate wheel is shown.

DTC REFERENCE

--	--

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

DTC	Tire location
91	Right-front
93	Left-front
95	Right-rear
97	Left-rear

Is DTC 91, 93, 95 or 97 indicated?

YES - Replace the appropriate tire pressure sensor (see **TIRE PRESSURE SENSOR REPLACEMENT**).

NO - The system is OK at this time.

SYMPTOM TROUBLESHOOTING

LOW TIRE PRESSURE INDICATOR DOES NOT COME ON, AND NO DTCS ARE STORED ('07 MODEL)

NOTE: Check for gauge DTCs with the HDS (see **WIRE COLOR CODES**). If gauge DTCs are stored, troubleshoot those DTCs first.

1. Turn the ignition switch to ON (II).
2. Check the low tire pressure indicator for several seconds when the ignition switch is turned to ON (II).

Did the indicator come on and then go off?

YES - Go to step 3.

NO - Do the troubleshooting for the gauge control module (see **SELF-DIAGNOSTIC FUNCTION**). If necessary, substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), and recheck.

3. Lower the pressure in any tire until the low tire pressure indicator comes on.

NOTE: If 5 minutes has passed since the ignition switch has been turned to ON (II), turn the ignition switch to LOCK (0) and wait 2 minutes, then turn back ON (II) again.

Does the indicator come on when the pressure drops below 175 kPa (1.8 kgf/cm² , 25 psi) or less?

YES - The system is OK at this time.

NO - Go to step 4.

4. Check the TIRE PRESSURE in the TPMS DATA LIST with the HDS, and compare with measured actual tire pressure.

NOTE: If the HDS screen shows **UNDEFINED** for sensor status, turn the ignition switch to **LOCK (0)**, rotate the appropriate tire 1/4 turn, then turn the ignition switch to **ON (II)**, and try again. If **UNDEFINED** is still shown, repeat the procedure in the previous sentence until **NORMAL** is shown.

Is the indicated tire pressure on the HDS within 40 kPa (0.4 kgf/cm², 6 psi) of the actual tire pressure?

YES - Go to step 5.

NO - Replace the tire pressure sensor (see **TIRE PRESSURE SENSOR REPLACEMENT**).

5. Turn the ignition switch to **LOCK (0)**.
6. Disconnect the TPMS control unit 20P connector.
7. Measure voltage between TPMS control unit 20P connector terminals No. 4 and No. 8.

TPMS CONTROL UNIT 20P CONNECTOR

Wire side of female terminals

Fig. 37: Identifying Voltage Between TPMS Control Unit 20P Connector Terminals No. 4 And No. 8

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair short to power in the wire between the TPMS control unit and the No. 21 (7.5 A) fuse in the under-dash fuse/relay box.

NO - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

LOW TIRE PRESSURE INDICATOR DOES NOT COME ON, AND NO DTCS ARE STORED ('08-09 MODELS)

1. Turn the ignition switch to **ON (II)**.
2. Check the low pressure indicator for several seconds when the ignition switch is turned to **ON (II)**.

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

Did the indicator come on and then go off?

YES - Go to step 3.

NO - Do the troubleshooting for the gauge control module (see **SELF-DIAGNOSTIC FUNCTION**). If necessary, substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), and recheck.

3. Lower the pressure in any tire until the low tire pressure indicator comes on.

NOTE: If 5 minutes has passed since the ignition switch has been turned to ON (II), turn the ignition switch to LOCK (0) and wait 2 minutes, then turn back ON (II) again.

Does the indicator come on when the pressure drops below 175 kPa (1.8 kgf/cm² , 25 psi) or less?

YES - The system is OK at this time.

NO - Go to step 4.

4. Check the TIRE PRESSURE in the TPMS DATA LIST with the HDS, and compare with measured actual tire pressure.

NOTE: If the HDS screen shows UNDEFINED for sensor status, turn the ignition switch to LOCK (0), rotate the appropriate tire 1/4 turn, then turn the ignition switch to ON (II), and try again. If UNDEFINED is still shown, repeat the procedure in the previous sentence until NORMAL is shown.

Is the indicated tire pressure on the HDS within 40 kPa (0.4 kgf/cm² , 6 psi) of the actual tire pressure?

YES - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

NO - Replace the tire pressure sensor (see **TIRE PRESSURE SENSOR REPLACEMENT**).

LOW TIRE PRESSURE INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED ('07 MODEL)

1. Turn the ignition switch to LOCK (0).
2. Disconnect the TPMS control unit 20P connector.
3. Turn the ignition switch to ON (II).
4. Check the low tire pressure indicator for several seconds when the ignition switch is turned to ON (II).

Did the indicator come on and then go off?

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

YES - Replace the TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).

NO - Do the troubleshooting for the gauge control module (see **SELF-DIAGNOSTIC FUNCTION**). If necessary, substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), and recheck.

LOW TIRE PRESSURE INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED ('08-09 MODELS)

NOTE: If the low tire pressure indicator is turned on at the same time as the TPMS indicator, go to: troubleshoot the TPMS indicator does not go off, and no DTCS are stored in the TPMS symptom troubleshooting (see **TPMS indicator does not go off, and no DTCS are stored**) first.

1. Turn the ignition switch to ON (II).
2. Check the low tire pressure indicator for several seconds when the ignition switch is turned to ON (II).

Did the indicator come on and then blink for about 75 seconds?

YES - Check for gauge DTCS with the HDS (see **WIRE COLOR CODES**) and go to the indicated gauge DTCS troubleshooting.

NO - Go to step 3

3. Turn the ignition switch to LOCK (0).
4. Disconnect the TPMS control unit 20P connector.
5. Turn the ignition switch to ON (II).
6. Check the low tire pressure indicator for several seconds when the ignition switch is turned to ON (II).

Did the indicator come on and then blink for about 75 seconds?

YES - Replace the TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).

NO - Do the troubleshooting for the gauge control module (see **SELF-DIAGNOSTIC FUNCTION**). If necessary, substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), and recheck.

TPMS INDICATOR DOES NOT COME ON, AND NO DTCS ARE STORED

1. Turn the ignition switch to LOCK (0).
2. Disconnect the TPMS control unit 20P connector.
3. Turn the ignition switch to ON (II).
4. Check the TPMS indicator when the ignition switch is turned to ON (II).

Did the indicator come on?

2008 Acura MDX

2007-09 SUSPENSION TPMS (Tire Pressure Monitoring System) - MDX

YES - Check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

NO - Do the troubleshooting for the gauge control module (see **SELF-DIAGNOSTIC FUNCTION**). If necessary, substitute a known-good gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), and recheck.

TPMS INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

NOTE: Check for gauge DTCs with the HDS (see **WIRE COLOR CODES**). If gauges DTCs are stored, troubleshoot those DTCs first.

1. Turn the ignition switch to LOCK (0).
2. Check the No. 1 (7.5 A) fuse in the under-dash fuse/relay box.

Is the fuse blown?

YES - Replace the No. 1 (7.5 A) fuse, and recheck.

NO - Reinstall the fuse, then go to step 3.

3. Check the No. 21 (7.5 A) fuse in the under-dash fuse/relay box.

Is the fuse blown?

YES - Replace the No. 21 (7.5 A) fuse, and recheck.

NO - Reinstall the fuse, then go to step 4.

4. Measure voltage between body ground and TPMS control unit 20P connector terminal No. 10.

TPMS CONTROL UNIT 20P CONNECTOR

Fig. 38: Identifying Voltage Between Body Ground And TPMS Control Unit 20P Connector Terminal No. 10

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 5.

NO - Repair open in the wire between the TPMS control unit and the No. 1 (7.5 A) fuse in the under-dash fuse/relay box.

5. Turn the ignition switch to ON (II).
6. Measure voltage between body ground and TPMS control unit 20P connector terminal No. 8.

TPMS CONTROL UNIT 20P CONNECTOR

Fig. 39: Identifying Voltage Between Body Ground And TPMS Control Unit 20P Connector Terminal No. 8

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 7.

NO - Repair open in the wire between the TPMS control unit and the No. 21 (7.5 A) fuse in the under-dash fuse/relay box.

7. Measure voltage between body ground and TPMS control unit 20P connector terminal No. 4.

TPMS CONTROL UNIT 20P CONNECTOR

Fig. 40: Identifying Voltage Between Body Ground And TPMS Control Unit 20P Connector Terminal No. 4

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES - Repair open or high resistance in the wire between the TPMS control unit and body ground (G401).

NO - Do the troubleshooting for the gauge control module (see **SELF-DIAGNOSTIC FUNCTION**). If the gauge control module is OK, check for loose terminals and poor connections at the TPMS control unit. If necessary, substitute a known-good TPMS control (see **TPMS CONTROL UNIT REPLACEMENT**), and recheck.

TPMS CONTROL UNIT REPLACEMENT

NOTE: Make sure the TPMS control unit mounting bracket is not bent or twisted as this may affect its communication with the initiators and the tire pressure sensors.

1. Turn the ignition switch to LOCK (0).
2. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
3. Disconnect the TPMS control unit connector (A).

NOTE: The TPMS control unit is located on the brake pedal bracket.

Fig. 41: Identifying TPMS Control Unit Connector, Flange Bolt And TPMS Control Unit With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the flange bolt (B) from the brake pedal bracket.
5. Remove the TPMS control unit (C) with the bracket (D).
6. Remove the TPMS control unit (A) from the bracket (B).

NOTE: While separating the TPMS control unit from the bracket, release the hook (C) on the TPMS control unit using a flat-tipped screwdriver (D), and push it up to remove the bracket.

Fig. 42: Identifying TPMS Control Unit And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the TPMS control unit in the reverse order of removal.

NOTE: Make sure the TPMS control unit is properly installed. You will hear a click when the TPMS control unit is securely mounted on the bracket.

8. Connect the HDS, and memorize the tire pressure sensor IDs (see MEMORIZING A TIRE PRESSURE SENSOR ID). Do not memorize the IDs automatically.

INITIATOR REPLACEMENT

NOTE: Make sure the initiator mounting bracket is not bent or twisted as this may affect its communication with the TPMS control unit and the tire pressure sensor.

FRONT

1. Turn the ignition switch to LOCK (0).
2. Raise the front of the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
3. Remove the front wheel.
4. Remove the front inner fender (see FRONT INNER FENDER REPLACEMENT).
5. Disconnect the initiator connector (A).

Fig. 43: Identifying Initiator Connector And Initiator With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the initiator (B) from the inner side of the wheelwell.
7. Install the initiator in the reverse order of removal.

REAR

1. Turn the ignition switch to LOCK (0).
2. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
3. Remove the rear wheel.
4. Remove the rear fender cover (see **REAR FENDER COVER REPLACEMENT**).
5. Disconnect the initiator connector (A).

Fig. 44: Identifying Initiator Connector And Initiator With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the initiator (B) from the inner side of the wheelwell.
7. Install the initiator in the reverse order of removal.

TIRE PRESSURE SENSOR REPLACEMENT

REMOVAL

1. Raise the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the wheel with the faulty sensor.
3. Remove the tire valve stem cap and the valve stem core, and let the tire deflate.
4. Remove any balance weights, and then break the bead loose from the wheel with a commercially available tire changer (A).

NOTE: Note these items to avoid damaging the tire pressure sensor:

- Do the outside of the wheel first.
- Position the wheel as shown so the valve stem (B) is 90 degrees from the bead breaker (C) as shown.
- Do not position the bead breaker of the tire changer too close to the rim.

Fig. 45: Identifying Tire Changer And Bead Breaker
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Position the wheel so the tire machine (A) and tire iron (B) are next to the valve stem (C) and will move away from it when the machine starts. Then remove the tire from the wheel.

Fig. 46: Identifying Tire Machine And Tire Iron
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the valve stem nut (A) and washer (B), then remove the tire pressure sensor with valve stem (C) from the wheel.

Fig. 47: Identifying Valve Stem Nut And Washer And Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove and discard the valve stem grommet (A), from the tire pressure sensor (B).

NOTE:

- The valve stem grommet might stay in the wheel; make sure you remove it.
- Always use a new valve stem grommet whenever the tire pressure sensor has been removed from the wheel. When only removing a tire from the wheel, replace the valve stem grommet if it is possible.

Fig. 48: Identifying Valve Stem Grommet And Tire Pressure Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE:

- Use only wheels that have a "TPMS" stamp (A) on them.

- This vehicle may be equipped with one of the two types of wheels.

Type 1

Fig. 49: Identifying "TPMS" Stamp (Type 1)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Type 2

Fig. 50: Identifying "TPMS" Stamp (Type 2)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Before installing the tire pressure sensor, clean the mating surfaces on the sensor and the wheel.
2. Install the tire pressure sensor (A) and the washer (B) to the wheel (C), and tighten the valve stem nut (D) finger tight. Make sure the pressure sensor is resting on the wheel.

Fig. 51: Identifying Tire Pressure Sensor, Washer And Valve Stem Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tighten the valve stem nut to the specified torque while holding the tire pressure sensor.

NOTE: Do not use air or electric impact tools to tighten a valve stem nut.

4. Lube the tire bead, and position the wheel so the tire machine (A) and tire iron (B) are next to the valve stem (C) and will move away from it when the machine starts. Then install the tire onto the wheel.

Fig. 52: Identifying Tire Machine, Tire Iron And Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inflate the tire to 300 kPa (3.1 kgf/cm², 44 psi) to seat the tire bead to the rim, then adjust the tire pressure (see **WHEEL ALIGNMENT**), then install the valve stem cap.

NOTE: Make sure the tire bead is uniformly seated on both sides of the rim.

6. Check and adjust the wheel balance, then install the wheels on the vehicle.
7. Remove the jack stands, and lower the vehicle. Torque the wheel nuts to specifications.
8. Connect the HDS and memorize the tire pressure sensor IDs (see **MEMORIZING A TIRE PRESSURE SENSOR ID**).

2008 Acura MDX

	Problem
<u>DTC P1684</u>	Throttle Valve Return Spring Performance Problem
<u>DTC P2101</u>	ETCS Malfunction
<u>DTC P2118</u>	Throttle Actuator Current Range/ Performance Problem
<u>DTC P2122</u>	APP Sensor A (TP Sensor D) Circuit Low Voltage
<u>DTC P2123</u>	APP Sensor A (TP Sensor D) Circuit High Voltage
<u>DTC P2127</u>	APP Sensor B (TP Sensor E) Circuit Low Voltage
<u>DTC P2128</u>	APP Sensor B (TP Sensor E) Circuit High Voltage
<u>DTC P2135</u>	TP Sensor A/B Voltage Incorrect Correlation
<u>DTC P2138</u>	APP Sensor A/B (TP Sensor D/E) Incorrect Voltage Correlation
<u>DTC P2176</u>	Throttle Actuator Control System Idle Position Not Learned

EVAP DTCS (A00293957)**EVAP DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description
<u>DTC P0443</u>	EVAP Canister Purge Valve Circuit Malfunction
<u>DTC P0451</u>	FTP Sensor Range/Performance Problem
<u>DTC P0452</u>	FTP Sensor Circuit Low Voltage
<u>DTC P0453</u>	FTP Sensor Circuit High Voltage
<u>DTC P0455; P0456</u>	EVAP System Very Large Leak Detected; EVAP System Very Small Leak Detected
<u>DTC P0457</u>	EVAP System Leak Detected/Fuel Fill Cap Loose or Missing
<u>DTC P0496</u>	EVAP System High Purge Flow
<u>DTC P0497</u>	EVAP System Low Purge Flow
<u>DTC P0498</u>	EVAP Canister Vent Shut Valve Control Circuit Low Voltage
<u>DTC P0499</u>	EVAP Canister Vent Shut Valve Control Circuit High Voltage
<u>DTC P1454; P2422</u>	FTP Sensor Range/Performance Problem; EVAP Canister Vent Shut Valve Close Malfunction
<u>DTC P145C</u>	EVAP System Purge Flow Malfunction (Vacuum Line)

FUEL SUPPLY DTCS (A00293926)**FUEL SUPPLY DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description

2008 Acura MDX

2007-08 DTC INDEX MDX

<u>DTC P0461</u>	Fuel Level Sensor (Fuel Gauge Sending Unit) Range/Performance Problem
<u>DTC P0462</u>	Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Low Voltage
<u>DTC P0463</u>	Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit High Voltage
<u>DTC P0627</u>	Fuel Pump Control Module System Malfunction

GAUGES DTCS (A00293913)**GAUGES DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description
<u>DTC B1152</u>	Gauge Control Module Internal (EEPROM) Error
<u>DTC B1155; B1156</u>	Gauge Control Module Lost Communication with Combination Switch Control Unit (HLSW Message); Gauge Control Module Lost Communication with Combination Switch Control Unit (WIPSW Message)

<u>DTC B1158</u>	Gauge Control Module Lost Communication with Relay Control Module (RM Message)
<u>DTC B1162</u>	Gauge Control Module Lost Communication with Power Tailgate (PTG Message)
<u>DTC B1168; B1169; B1178</u>	Gauge Control Module Lost Communication with PCM (ENG Message); Gauge Control Module Lost Communication with the PCM (A/T Message); F- CAN Communication Line Error
<u>DTC B1170</u>	Gauge Control Module Lost Communication with the VSA Modulator-Control Unit (VSA Message)
<u>DTC B1173</u>	Gauge Control Module Lost Communication with the TPMS Control Unit (TPMS Message)
<u>DTC B1175</u>	Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Open
<u>DTC B1176</u>	Fuel Level Sensor (Fuel Gauge Sending Unit) Circuit Short
<u>DTC B1177</u>	Battery Voltage Abnormal
<u>DTC B1182</u>	Gauge Control Module Lost Communication with Driver's MPCS Unit (DRLOCKSW Message)

2008 Acura MDX

2007-08 DTC INDEX MDX

<u>DTC B1187</u>	Gauge Control Module Lost Communication with SRS Unit (SRS Message)
<u>DTC B1189</u>	Gauge Control Module Lost Communication with Active Damper System Control Unit (ADS Message)

HANDSFREELINK DTCS (A00293916)**HANDSFREELINK DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description
<u>DTC B1775</u>	Microphone Input/Output Short to Power/Open
<u>DTC B1776</u>	Microphone Input/Output Short to Ground/Open
<u>DTC B1779</u>	HFL Switch (HFL TALK/HFL BACK Buttons) Circuit Open/Short
<u>DTC B1780</u>	HFL Switch (HFL TALK/HFL BACK Buttons) Circuit Short
<u>DTC B1785</u>	Incorrect Configuration (VEHINFO Frame)
<u>DTC B1786</u>	HandsFreeLink Control Unit Lost Communication with Gauge Control Module (VEHINFO Frame)
<u>DTC B1792</u>	HandsFreeLink Control Unit Internal Error

IDLE CONTROL DTCS (A00293944)**IDLE CONTROL DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description
<u>DTC P0506</u>	Idle Control System RPM Lower Than Expected
<u>DTC P0507</u>	Idle Control System RPM Higher Than Expected

IMMOBILIZER DTCS (A00293960)**IMMOBILIZER DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description
<u>DTC B1905</u>	Immobilizer-Keyless Control Unit Lost Communication with Driver's MPCs Unit (DRLOCKSW Message)
<u>DTC B1906</u>	Immobilizer-Keyless Control Unit Lost Communication with Gauge Control Module (A/T Message)

INTAKE AIR DTCS (A00293927)**INTAKE AIR DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description

2008 Acura MDX

2007-08 DTC INDEX MDX

<u>DTC P1077</u>	IMT Valve Stuck in High RPM Position
<u>DTC P1078</u>	IMT Valve Stuck in Low RPM Position

KEYLESS/POWER DOOR LOCKS/SECURITY (A00293991)**KEYLESS/POWER DOOR LOCKS/SECURITY DIAGNOSTIC TROUBLE CODE (DTC) IDENTIFICATION**

DTC	Description
<u>DTC B2179</u>	Driver's Door Key Cylinder Switch LOCK/UNLOCK Signal Error
<u>DTC B2180</u>	Driver's Door Lock Switch LOCK/ UNLOCK Signal Error
<u>DTC B2181</u>	Driver's Door Lock Knob Switch LOCK/UNLOCK Signal Error
<u>DTC B2186</u>	Front Passenger's Door Lock Switch LOCK/UNLOCK Signal Error

MULTIPLEX INTEGRATED CONTROL DTCS (A00293917)**MULTIPLEX INTEGRATED CONTROL DIAGNOSTIC TROUBLE CODE (DTC) LIST IDENTIFICATION**

DTC	Description
<u>DTC B1000</u>	Communication Bus Line Error
<u>DTC B1001; B1002</u>	MICU Internal (CPU) Error; MICU Internal (EEPROM) Error
<u>DTC B1005</u>	MICU Lost Communication with Relay Control Module (RM Message)
<u>DTC B1007</u>	MICU Lost Communication with Combination Switch Control Unit (HLSW Message)
<u>DTC B1011</u>	MICU Lost Communication with Gauge Control Module (VSP/NE Message)
<u>DTC B1012</u>	MICU Lost Communication with Rear MICU (RJC Message)
<u>DTC B1013; B1015</u>	MICU Lost Communication with Driver's MPCS Unit (ASLOCKSW Message); MICU Lost Communication with Driver's MPCS Unit (DRLOCKSW Message)
<u>DTC B1032</u>	MICU Lost Communication with the SRS Unit (CDS Message)
<u>DTC B1080</u>	Ignition Key Switch Circuit Malfunction
<u>DTC B1050; B1150; B1200; B1250; B1350; B1750; B1800; B1900; B1950; B2150; B2200</u>	Communication Bus Line Error; Communication Bus Line Error; Communication Bus Line Error; Communication Bus Line Error; Communication Bus

TURN SIGNAL/HAZARD RELAY INPUT TEST

1. Remove the turn signal/hazard relay (A) from the under-dash fuse/relay box (B).

Fig. 4: Identifying Turn Signal/Hazard Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Inspect the relay and fuse/relay box socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 3.
3. Make these input tests at the under-dash fuse/relay box.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, the turn signal/hazard relay must be faulty; replace it.

CAVITY AND TEST CONDITION CHART

Cavity	Teat condition	Test: Desired result	Possible cause if desired result is not obtained
6	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 10 (15 A) fuse in the main under-hood fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire
1	Under all conditions	Check for continuity to ground: There should be continuity.	• Poor ground (G601) • Faulty under-dash fuse/relay box • An open in the wire
		Check the turn signal lights	• Blown bulb

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Turn Signal/Hazard Warning Lights - MDX

2	Connect the No. 6 and the No. 2 terminals with a jumper wire.	operation. The left turn signal lights and indicator should come on.	• Poor ground(G301, G601, G701) • Faulty LED • An open in the wire
3	Connect the No. 6 and the No. 3 terminals with a jumper wire.	Check the turn signal lights operation. The right turn signal lights and indicator should come on.	• Blown bulb • Poor ground (G201, G601, G701) • Faulty LED • An open in the wire
4	Ignition switch ON (II) and turn signal switch in Left position.	Measure the voltage to ground. There should be about 10 V or more.	• Poor ground (G601) • Faulty turn signal switch • Faulty under-dash fuse/relay box • An open in the wire • Faulty combination switch control unit⁽¹⁾ • Faulty MICU⁽¹⁾
5	Ignition switch ON (II) and turn signal switch in Right position.	Measure the voltage to ground. There should be about 10 V or more.	
4	Hazard warning switch ON	Measure the voltage to ground. There should be about 10 V or more.	• Poor ground(G601) • Blown No. 10 (15 A) fuse in the main under-hood fuse/relay box • Faulty under-dash fuse/relay box • Faulty hazard warning switch • An open in the wire • Faulty MICU⁽¹⁾
5		Measure the voltage to ground. There should be about 10 V or more.	

(1) Go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

HAZARD WARNING SWITCH TEST/ REPLACEMENT

1. Remove the center panel (see **DASHBOARD CENTER PANEL REMOVAL/ INSTALLATION**).
2. Disconnect the 6P connector (A) from the hazard warning switch (B).

Fig. 5: Identifying 6P Connector From Hazard Warning Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the hazard warning switch from the center panel.
4. Check for continuity between the terminals in each switch position.

Terminal Position	5	6	3		4
OFF			○	⊕	○
ON	○	○	○	⊕	○

Fig. 6: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity is not as specified, replace the bulb (C) or the hazard warning switch.

SIDE TURN SIGNAL LIGHT REPLACEMENT

1. Remove the mirror holder (see MIRROR HOLDER REPLACEMENT).
2. Remove the screw, then pull out the side turn signal light (A).

Fig. 7: Identifying 2P Connector From Light And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (B) from the light.
4. Install the parts in the reverse order of removal.

DTC TROUBLESHOOTING

DTC P2646: ROCKER ARM OIL PRESSURE SWITCH CIRCUIT LOW VOLTAGE

Special Tools Required

- Pressure gauge adapter 07NAJ-P07010A
- A/T low pressure gauge w/panel 07406-0070301
- A/T pressure hose 07406-0020201
- A/T pressure hose, 2,210 mm 07MAJ-PY4011A
- A/T pressure adapter 07MAJ-PY40120
- Oil pressure hose 07ZAJ-S5AA200

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL

TROUBLESHOOTING INFORMATION).

1. Check the engine oil level.

Is the engine oil level OK?

YES - Go to step 2.

NO - Adjust the engine oil to the proper level, then go to step 20.

2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Do the VTEC TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Disconnect the rocker arm oil pressure switch 2P connector.
7. Turn the ignition switch ON (II).
8. Check the VTEC PRES SW in the DATA LIST with the HDS.

Is SWITCH ON indicated?

YES - Go to step 15.

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Remove the rocker arm oil pressure switch (A), install the special tools as shown, then install the rocker arm oil pressure switch on the oil pressure gauge adapter (B).

NOTE: **Install the parts in the reverse order of removal with a new O-ring.**

Fig. 2: Identifying Rocker Arm Oil Pressure Switch With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Reconnect the rocker arm oil pressure switch 2P connector.
12. Start the engine.
13. Do the VTEC TEST in the INSPECTION MENU with the HDS.
14. Check the oil pressure.

Does the oil pressure increase to at least 392 kPa (4.0 kgf/cm² , 56.9 psi)?

YES - Replace the rocker arm oil pressure switch (see **ROCKER ARM OIL PRESSURE SWITCH REMOVAL/INSTALLATION**), then go to step 19.

NO - Inspect the following items. If they are OK, replace the rocker arm oil control solenoid (see **ROCKER ARM OIL CONTROL SOLENOID REPLACEMENT**), then go to step 19.

- VTEC system's oil line
- Operation of the rocker arm (see **VTEC ROCKER ARM TEST**)

15. Turn the ignition switch to LOCK (0).
16. Jump the SCS line with the HDS.
17. Disconnect PCM connector B (49P).
18. Check for continuity between PCM connector terminal B20 and body ground.

Fig. 3: Identifying Continuity Between PCM Connector Terminal B20 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B20) and the rocker arm oil pressure switch, then go to step 19.

NO - Go to step 26.

19. Reconnect all connectors.
20. Turn the ignition switch ON (II).
21. Reset the PCM with the HDS.
22. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
23. Do the VTEC TEST in the INSPECTION MENU with the HDS.
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2646 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control valve, and the PCM, then go to step 1.

NO - Go to step 25.

25. Monitor the OBD STATUS for DTC P2646 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 24, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control valve, and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 23.

26. Reconnect all connectors.
27. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
28. Do the VTEC TEST in the INSPECTION MENU with the HDS.
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2646 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 30.

30. Monitor the OBD STATUS for DTC P2646 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 28, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2647: ROCKER ARM OIL PRESSURE SWITCH CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Check the engine oil level.

Is the engine oil level OK?

YES - Go to step 2.

NO - Adjust the engine oil to the proper level, then go to step 16.

2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Do the VTEC TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM.

NO - Go to step 5.

5. Check the result of step 4.
 - VTEC Switch Failure
 - VTEC Switch Open
 - VTEC Switch SIG Line Open
 - VTEC Switch GND Line Open

Is the test result any of the above?

YES - Go to step 6.

NO - Check for poor connections or loose terminals at the rocker arm oil pressure switch. If it is OK, replace the rocker arm oil control solenoid assembly (see **ROCKER ARM OIL CONTROL SOLENOID REPLACEMENT**), then go to step 15.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the rocker arm oil pressure switch 2P connector.
8. At the rocker arm oil pressure switch side, check for continuity between rocker arm oil pressure switch 2P connector terminals No. 1 and No. 2.

**ROCKER ARM OIL PRESSURE SWITCH
2P CONNECTOR**

Terminal side of male terminals

Fig. 4: Identifying Continuity Between Rocker Arm Oil Pressure Switch 2P Connector Terminals No. 1 And No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Replace the rocker arm oil pressure switch (see **ROCKER ARM OIL PRESSURE SWITCH**

REMOVAL/INSTALLATION), then go to step 16.

9. Turn the ignition switch ON (II).
10. Measure voltage between rocker arm oil pressure switch 2P connector terminal No. 1 and body ground.

**ROCKER ARM OIL PRESSURE SWITCH
2P CONNECTOR**

Wire side of female terminals

Fig. 5: Identifying Voltage Between Rocker Arm Oil Pressure Switch 2P Connector Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair open in the wire between the rocker arm oil pressure switch and G101, then go to step 15.

NO - Go to step 11.

11. Turn the ignition switch OFF.
12. Jump the SCS line with the HDS.
13. Disconnect PCM connector B (49P).
14. Check for continuity between PCM connector terminal B20 and rocker arm oil pressure switch 2P connector terminal No. 1.

**ROCKER ARM OIL PRESSURE SWITCH
2P CONNECTOR**

VTPSW (BLU/WHT)

Terminal side of female terminals

Fig. 6: Identifying Continuity Between PCM Connector Terminal B20 And Rocker Arm Oil

Pressure Switch 2P Connector Terminal No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 22.

NO - Repair open in the wire between the PCM (B20) and the rocker arm oil pressure switch, then go to step 16.

15. Turn the ignition switch to LOCK (0).
16. Reconnect all connectors.
17. Turn the ignition switch ON (II).
18. Reset the PCM with the HDS.
19. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
20. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2647 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM, then go to step 1.

NO - Go to step 21.

21. Monitor the OBD STATUS for DTC P2647 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 20, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

22. Reconnect all connectors.
23. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
24. Start the engine.
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2647 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, substitute a known-good PCM (see

SUBSTITUTING THE PCM), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 26.

26. Monitor the OBD STATUS for DTC P2647 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 25, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil pressure switch, the rocker arm oil control solenoid, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P2648: ROCKER ARM OIL CONTROL SOLENOID CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VTEC TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM.

NO - Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Disconnect the rocker arm oil control solenoid 1P connector.
6. At the solenoid side, measure resistance between the rocker arm oil control solenoid 1P connector terminal and the solenoid valve body.

**ROCKER ARM OIL CONTROL SOLENOID
1P CONNECTOR**

Terminal side of male terminals

Fig. 7: Identifying Resistance Between Rocker Arm Oil Control Solenoid 1P Connector Terminal And Solenoid Valve Body

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 14-30 ohms at room temperature?

YES - Go to step 7.

NO - Go to step 10.

7. Jump the SCS line with the HDS.
8. Disconnect PCM connector B (49P).
9. Check for continuity between PCM connector terminal B39 and body ground.

PCM CONNECTOR B (49P)

Terminal side of female terminals

Fig. 8: Identifying Continuity Between PCM Connector Terminal B39 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B39) and the rocker arm oil control solenoid, then go to step 11.

NO - Go to step 18.

10. Replace the rocker arm oil control solenoid (see **ROCKER ARM OIL CONTROL SOLENOID REPLACEMENT**).
11. Reconnect all connectors.
12. Turn the ignition switch ON (II).
13. Reset the PCM with the HDS.
14. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
15. Do the VTEC TEST in the INSPECTION MENU with the HDS.
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2648 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM, then go to step 1.

NO - Go to step 17.

17. Monitor the OBD STATUS for DTC P2648 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 16, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 15.

18. Reconnect all connectors.
19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Do the VTEC TEST in the INSPECTION MENU with the HDS.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2648 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 22.

22. Monitor the OBD STATUS for DTC P2648 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 21, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 20.

DTC P2649: ROCKER ARM OIL CONTROL SOLENOID CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM.

5. Turn the ignition switch OFF.
6. Disconnect the rocker arm oil control solenoid 1P connector.
7. At the solenoid side, measure resistance between the rocker arm oil control solenoid 1P connector terminal and the solenoid valve body.

**ROCKER ARM OIL CONTROL SOLENOID
1P CONNECTOR**

Terminal side of male terminals

Fig. 9: Identifying Resistance Between Rocker Arm Oil Control Solenoid 1P Connector Terminal And Solenoid Valve Body

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 14-30 ohms at room temperature?

YES - Go to step 8.

NO - Go to step 11.

8. Jump the SCS line with the HDS.
9. Disconnect PCM connector B (49P).
10. Check for continuity between PCM connector terminal B39 and the rocker arm oil control solenoid 1P connector terminal.

Fig. 10: Identifying Continuity Between PCM Connector B39 And Rocker Arm Oil Control Solenoid 1P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair open in the wire between the PCM (B39) and the rocker arm oil control solenoid, then go to step 12.

11. Replace the rocker arm oil control solenoid (see **ROCKER ARM OIL CONTROL SOLENOID REPLACEMENT**).
12. Reconnect ail connectors.
13. Turn the ignition switch ON (II).
14. Reset the PCM with the HDS.
15. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
16. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM, then go to step 1.

NO - Go to step 17.

17. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 16, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

18. Reconnect all connectors.
19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Start the engine, and let it idle.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2649 indicated?

YES - Check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 22.

22. Monitor the OBD STATUS for DTC P2649 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 21, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the rocker arm oil control solenoid and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 20.

1. Remove the rocker arm oil control solenoid/oil filter assembly (A) from the oil pump, and check the rocker arm oil control solenoid filter (B) for a restriction. If there is a restriction, replace the rocker arm oil control solenoid filter, the engine oil filter, and the engine oil.

Fig. 11: Identifying Rocker Arm Oil Control Solenoid/Oil Filter Assembly With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the filter is not restricted, remove the rocker arm oil control solenoid (A), and push the valve (B) with your finger to check its movement. If the valve moves freely, it is normal; check the engine oil pressure (see **OIL PRESSURE TEST**). If the engine oil is OK, replace the rocker arm oil control solenoid (see **ROCKER ARM OIL CONTROL SOLENOID REPLACEMENT**). If the valve binds or sticks, replace the rocker arm oil control solenoid assembly.

Fig. 12: Identifying Rocker Arm Oil Control Solenoid And Valve With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM OIL CONTROL SOLENOID REPLACEMENT

1. Disconnect the rocker arm oil control solenoid connector (A).

Fig. 13: Identifying Rocker Arm Oil Control Solenoid Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the rocker arm oil control solenoid (B).
3. Install the parts in the reverse order of removal with a new O-ring (C).

ROCKER ARM OIL PRESSURE SWITCH REMOVAL/INSTALLATION

1. Disconnect the rocker arm oil pressure switch connector (A), then remove the rocker arm oil pressure switch (B).

Fig. 14: Identifying Rocker Arm Oil Pressure Switch Connector And Oil Pressure Switch With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parts in the reverse order of removal with a new O-ring (C).

DTC TROUBLESHOOTING

DTC B1076: WINDSHIELD WIPER SWITCH BACKUP CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Wipers/Washers - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Turn the windshield wiper switch ON for 5 seconds and OFF.
4. Check for DTCs with the HDS.

Is DTC B1076 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Select BODY ELECTRICAL system select menu, then enter the DATA LIST menu.
6. Check the ON/OFF information of the FR WIPER BACK-UP with the HDS.

Is OFF indicated?

YES - Go to step 7.

NO - Check for a short in the wire between the combination switch control unit and the relay control module (WIPER BACK-UP line), if the harness is OK, replace the combination switch control unit (see **WIPER/WASHER SWITCH REPLACEMENT**).

7. Turn the windshield wiper switch ON.
8. Check the ON/OFF information of the FR WIPER BACK-UP with the HDS.

Is ON indicated?

YES - Go to the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**) and check for a poor ground, if the GND line is OK, replace the under-hood fuse/ relay box (see **REMOVAL AND INSTALLATION**).

NO - Check for an open in the wire between the combination switch control unit and the relay control module (WIPER BACK-UP line), if the wire is OK, replace the combination switch control unit (see **WIPER/WASHER SWITCH REPLACEMENT**).

DTC B1077: WINDSHIELD WIPER AUTO SWITCH CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II), and the windshield wiper switch ON.
2. Check the windshield wiper operation.

Does the wiper work?

YES - Go to step 3.

NO - Go to step 13.

3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0), and then back ON (II).
5. Turn the windshield wiper switch ON, and then OFF.
6. Check for DTCs with the HDS.

Is DTC B1077 indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

7. Select BODY ELECTRICAL system select menu, then enter the DATA LIST menu.
8. Check the ON/OFF information of the FR WIPER AS with the HDS.

Is OFF indicated when the motor is stopped, and ON intermittently indicated when the motor runs?

YES - Faulty relay control module, replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect the windshield wiper motor 5P connector.
11. Disconnect under-hood fuse/relay box connector A (4P).
12. Check for continuity between the windshield wiper motor 5P connector No. 4 terminal and the under-hood fuse/relay box connector A (4P) No. 2 terminal.

Fig. 9: Identifying Continuity Between Windshield Wiper Motor And Under-Hood Fuse/Relay Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Wipers/Washers - MDX

YES - Faulty relay control module, replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

NO - Repair open in the wire.

13. Check the No. 11 (30 A) and No. 31 (15 A) fuses in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 12.

NO - Replace the fuse(s) and recheck the system.

14. Turn the ignition switch to LOCK (0).

15. Check the No. 11 (30 A) and No. 31 (15 A) fuses in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 16.

NO - Replace the fuse and recheck the system.

16. Do the wiper motor test (see **WIPER MOTOR TEST**).

Does the wiper motor run normally?

YES - Go to step 17.

NO - Replace the windshield wiper motor and recheck.

17. Disconnect the windshield wiper motor 5P connector.

18. Disconnect under-hood fuse/relay box connector A (4P).

19. Check for continuity between the windshield wiper motor 5P connector No. 3 and No. 5 terminals and the under-hood fuse/relay box connector A (4P) No. 3 and No. 4 terminals.

Fig. 10: Identifying Continuity Between Windshield Wiper Motor And Under-Hood Fuse/Relay Box

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Repair open in the wire.

20. Check for continuity between the windshield wiper motor 5P connector No. 2 terminal and body ground.

WINDSHIELD WIPER MOTOR 5P CONNECTOR

Wire side of female terminals

Fig. 11: Identifying Continuity Between Windshield Wiper Motor 5P Connector Terminal 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty relay control module, replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

NO - Repair open in the wire or poor ground (G401).

DTC B1281: WINDSHIELD WIPER SWITCH MIST POSITION CIRCUIT MALFUNCTION; DTC B1282: WINDSHIELD WIPER SWITCH INT (AUTO) POSITION CIRCUIT MALFUNCTION; DTC B1283: WINDSHIELD WIPER SWITCH LOW POSITION CIRCUIT MALFUNCTION; DTC B1284: WINDSHIELD WIPER SWITCH HIGH POSITION CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Turn the windshield wiper switch to MIST, and wait for 2 seconds.
4. Turn the windshield wiper switch OFF, and wait for 2 seconds.
5. Turn the windshield wiper switch to INT (AUTO), and wait for 2 seconds.
6. Turn the windshield wiper switch to LOW, and wait for 2 seconds.
7. Turn the windshield wiper switch in HIGH, and wait for 2 seconds.
8. Check for DTCs with the HDS.

Is DTC B1281, B1282, B1283, and/or B1284 indicated?

YES - Replace the wiper/washer switch.

NO - Intermittent failure, the wiper/washer switch and the combination switch control unit are OK at this time. Check for loose or poor connections.

WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST

NOTE: Before testing the combination switch control unit, troubleshoot the multiplex integrated control unit first, using **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Remove the dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnect the 8P connector (A) from the wiper/washer switch (B).

Fig. 12: Identifying Wiper/Washer Switch And 8P Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connector still disconnected, make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

CAVITY AND TEST CONDITION CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
1	WHT	Under all conditions	Check for continuity between the No. 1 terminal and the under-hood fuse/relay box connector E (14P) No. 11 terminal: There should be continuity.	An open in the wire
		Disconnect under-hood fuse/relay box connector E (14P) and the under-dash fuse/relay box connector P (30P)	Check for continuity to ground: There should be no continuity.	A short to ground in the wire
2	LT	Under all conditions	Check for continuity between the No. 2 terminal of the combination switch control unit and the headlight leveling control unit	An open in the

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Wipers/Washers - MDX**

	BLU		No. 16 terminal: There should be continuity.	wire
4	LT GRN	Under all conditions	Check for continuity between the No. 4 terminal and under-dash fuse/relay box connector N (45P) No. 28 terminal: There should be continuity.	An open in the wire
		Disconnect under-dash fuse/relay box connector N (45P)	Check for continuity to ground: There should be no continuity.	A short to ground in the wire
5	PNK	Under all conditions	Check for continuity between the No. 5 terminal and the under-hood fuse/relay box connector E (14P) No. 12 terminal: There should be continuity.	An open in the wire
		Disconnect under-hood fuse/relay box connector E (14P)	Check for continuity to ground: There should be no continuity.	A short to ground in the wire

6. Reconnect the 8P connector to the wiper/washer switch, and make these input tests at the connector.
- If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, replace the wiper/washer switch (combination switch control unit).

CAVITY AND TEST CONDITION CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
3	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G601) • An open in the wire
8	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire
7	YEL	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • An open in the wire

WIPER/WASHER SWITCH REPLACEMENT

NOTE: The wiper/washer switch is built into the combination switch control unit. For the wiper/washer test, refer to the **COMBINATION SWITCH CONTROL UNIT INPUT TEST** (see).

1. Remove the dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnect the combination light switch 20P connector (A), and dashboard wire harness 8P connector (B) from the wiper/washer switch (C).

Fig. 13: Identifying Combination Light Switch 20P Connector And Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the two screws, then slide out the wiper/washer switch.

HEADLIGHT WASHER SWITCH TEST/ REPLACEMENT

CANADA MODELS

1. Carefully pry the switch out from the dashboard.
2. Disconnect the 5P connector (A) from the headlight washer switch (B).

Fig. 14: Identifying Headlight Washer Switch And 5P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.

Terminal Position	1	2	4		5
OFF			○	⊗	○
ON	○	○	○	⊗	○

Fig. 15: Checking For continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the bulb (C) or the headlight washer switch.

Fig. 16: Identifying Bulb And Headlight Washer Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the switch in the reverse order of removal.

WIPER MOTOR TEST

WINDSHIELD

1. Open the hood, and remove the wiper arms (see WIPER MOTOR REPLACEMENT).

NOTE: Carefully remove the wiper arms so that they do not touch the hood.

2. Remove the cowl covers (see COWL COVER REPLACEMENT).
3. Disconnect the 5P connector (A) from the windshield wiper motor (B).

Fig. 17: Identifying Windshield Wiper Motor And 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Test the motor by connecting battery power to the windshield wiper motor 5P connector No. 3 terminal and ground to the No. 2 terminal. The motor should run at low speed. If the motor does not run or fails to run smoothly, replace the motor.
5. Test the motor by connecting battery power to the windshield wiper motor 5P connector No. 5 terminal and ground to the No. 2 terminal. The motor should run at high speed. If the motor does not run or fails to run smoothly, replace the motor (see **WIPER MOTOR REPLACEMENT**).
6. Connect an analog ohmmeter between the windshield wiper motor 5P connector No. 1 and No. 4 terminals, and run the motor at low or high speed. The ohmmeter should indicate continuity and no continuity alternately. If it does not, replace the motor.

REAR WINDOW

1. Open the tailgate, and remove the tailgate lower panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. Disconnect the 4P connector (A) from the rear window wiper motor (B).

Fig. 18: Identifying Rear Window Wiper Motor And 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the motor by connecting battery power to the rear window wiper motor 4P connector No. 1 terminal and ground to the No. 2 terminal. The motor should run. If the motor does not run or fails to run smoothly, replace the motor (see **REAR WINDOW WIPER MOTOR REPLACEMENT**).
4. Connect an analog ohmmeter between the rear window wiper motor 4P connector No. 2 and No. 3 terminals. The ohmmeter should indicate continuity and no continuity alternately. If it does not, replace the motor.

WASHER MOTOR TEST

1. Remove the right inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector (A) from the washer motor (B).

Fig. 19: Identifying Washer Motor And 2P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the motor by connecting battery power to the No. 2 (No. 1) terminal and ground the No. 1 (No. 2) terminal of the washer motor. The motor should run.

(): Rear window washer direction.

- If the motor does not run or fails to run smoothly, replace it.
- If the motor runs smoothly, but little or no washer fluid is pumped, check for a disconnected or blocked washer hose, or a clogged washer motor outlet.

WASHER FLUID LEVEL SWITCH TEST

1. Remove the right inner fender (see FRONT INNER FENDER REPLACEMENT).
2. Disconnect the 2P connector (A) from the washer fluid level switch.

Fig. 20: Identifying Washer Fluid Level Switch And 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the washer fluid level switch from the washer reservoir.

NOTE: Fluid may flow out of the opening.

4. Check for continuity between the No. 1 and No. 2 terminals in each float position.
 - There should be continuity when the float is down.
 - There should be no continuity when the float is up.
5. If the continuity is not as specified, replace the switch.

WIPER MOTOR REPLACEMENT

1. Open the hood. Remove the caps, nuts (A), and the windshield wiper arms (B).

Fig. 21: Identifying Windshield Wiper Arms And Caps, Nuts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the cowl covers (see **COWL COVER REPLACEMENT**).
3. Disconnect the 5P connector (A) from the wiper motor.

Fig. 22: Identifying Wiper Motor And 5P Connector With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the three bolts (B) and the wiper linkage assembly (C).
5. Make sure the mark of the link to show the original adjustment. Separate the windshield wiper linkage (B) from the wiper motor (C).

Fig. 23: Identifying Windshield Wiper Linkage From Wiper Motor With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install in the reverse order of removal, and note these items:
 - Align the marks of the link and the linkage to install the linkage with the original adjustment.
 - Apply multipurpose grease to the moving parts.
 - Before installing the wiper arms, turn the wiper switch ON, then OFF to return the shafts to the park position.
 - If necessary, replace any damaged clips.
7. After installation, adjust the wiper arms (see WIPER ARM/NOZZLE ADJUSTMENT).

REAR WINDOW WIPER MOTOR REPLACEMENT

1. Open the tailgate, and remove the tailgate lower trim panel (see TRIM REMOVAL/INSTALLATION - TAILGATE AREA).
2. Remove the mounting nut (A), the wiper arm (B) and the special nut (C).

Fig. 24: Identifying Wiper Arm And Mounting Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 4P connector (A) and remove the three mounting bolts (B), then remove the rear window wiper motor (C).

Fig. 25: Identifying Rear Window Wiper Motor And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install in the reverse order of removal.

WASHER RESERVOIR REPLACEMENT

1. Remove the right inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector (A) from the washer motor(s) (B) and the washer fluid level switch (C).

Washer Reservoir Capacity
4.0 L (4.2 US qt): USA models
5.8 L (6.1 US qt): Canada models

Fig. 26: Identifying Washer Motor And Washer Fluid Level Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the washer tubes.
4. Remove the bolts and the washer reservoir.

Fig. 27: Identifying Washer Reservoir Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install in the reverse order of removal. Check the washer motor operation.

HEADLIGHT WASHER MOTOR TEST/ REPLACEMENT

CANADA MODELS

1. Remove the right inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector (A) from the washer motor (B).

Fig. 28: Identifying Headlight Washer Motor And 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the motor by connecting battery power to the headlight washer motor 2P connector No. 1 terminal and ground to the No. 2 terminal. The motor should run.
 - If the motor does not run or fails to run smoothly, replace it.
 - If the motor runs smoothly, but little or no washer fluid is pumped, check for a disconnected or blocked washer hose, or a clogged washer motor outlet.
4. Install the washer motor in the reverse order of removal.

HEADLIGHT WASHER NOZZLE REPLACEMENT

CANADA MODELS

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**), and disconnect the headlight washer tubes from the washer motor.
2. Disconnect the headlight washer tube (A) from the headlight washer nozzle (B).

Fig. 29: Identifying Headlight Washer Tube From Headlight Washer Nozzle With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the headlight washer nozzle cover (C).
4. Remove the two screws and the headlight washer nozzle.
5. Install the nozzle in the reverse order of removal. After installation, check the headlight washer operation.

WIPER BLADE REPLACEMENT

WINDSHIELD

1. Lift the wiper arms from the windshield.

NOTE: Lift the driver's side first.

2. Press and hold the tab (A) and slide the wiper blade (B) toward the tab to release it from the wiper arm.

Fig. 30: Identifying Tab And Wiper Blade To Wiper Arm

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the rubber (A) out from the wiper blade (B).

Fig. 31: Identifying Rubber From Wiper Blade

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a new rubber to the wiper blade in the reverse order of removal.
5. Install the wiper blades onto the wiper arms in the reverse order of removal.
6. Check the wiper operation, if the blades slip, turn the wiper switch OFF, and reinstall the wiper blades securely.

REAR WINDOW

1. Lift the wiper arm from the rear window.
2. Turn the rear wiper blade (A), release the lock, and then remove the wiper blade from the rear wiper arm (B).

Fig. 32: Identifying Wiper Blade From Rear Wiper Arm

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Raise the old rubber (A), and remove it from the wiper blade (B).

Fig. 33: Identifying Rubber And Wiper Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the new rubber and the wiper blade in the reverse order of removal.

NOTE: After installation, confirm that the wiper arm works smoothly.

WIPER ARM/NOZZLE ADJUSTMENT

WINDSHIELD

Wiper arms park position

1. When the wiper arms stop at the park (automatic stop) position, confirm that they are at the standard position.
 - a: Position at about 1.6 in. (40.7 mm) from the top of cowl cover (A)
 - b: Position at about 2.1 in. (54.3 mm) from the top of cowl cover (A)

Washer nozzle position

2. When you turn on the washers, confirm 50 % or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzles.
 - c: Position at about 6.2 in. (157.3 mm) from the top of the black ceramic area (B) at the lower windshield
 - d: Position at about 6.2 in. (157.3 mm) from the top of the black ceramic area (B) at the lower windshield
 - e: Position at about 11.8 in. (300 mm) from the windshield center line (C)
 - f: Position at about 11.8 in. (300 mm) from the windshield center line (C)

Fig. 34: Identifying Washer Nozzle Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW

Wiper arm park position

1. When the wiper arm stops at the park position, confirm that it is at the standard position.
 - a. Position at about 0.4 in. (11.2 mm) from the black ceramic area (A)

Washer nozzle position

2. When you turn on the washers, confirm 50 % or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzles.
 - b: Position at about 5.1 in. (130.2 mm) from the rear washer nozzle (B)

Fig. 35: Identifying Washer Nozzle Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

WASHER TUBE REPLACEMENT

1. Remove the washer nozzles and clips, then remove the washer tubes.

Windshield/Rear Window Washers

Fig. 36: Identifying Windshield/Rear Window Washers Location (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 37: Identifying Windshield/Rear Window Washers Location (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Headlight Washer (Canada models)

Fig. 38: Identifying Headlight Washer (Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parts in the reverse order of removal. Take care not to pinch the washer tubes. Check the washer operation.
